Take the plates off your car and see if two meters picks up after that.

I'm getting tired of you coming on to me, glenn...
It's "historical fact" (anyone can use DejaNews once Googles gets thru with
their merger.. or maybe it's already been moved over) that you've "cruised"
for guys in the radio ng's, and considering the # of replies to my posts
you've made in the last couple of mnths, well... Get lost, ra(dio)ggit...
PS. And I know you'll claim someone else forged the posts again, glenn..
But that's not really very likely, now is it?...

Wishful thinking tin badge? You can dish it out but can't take it ehh?

Hate to disappoint you BD, I am pure heterosexual and happily married so you can quit hoping I'll come over to your way of life. I suppose you would solicit a homosexual relationship on a radio newsgroup but the logic defies me, maybe that's how you met your Oregon boy love?

The point that you fail to address is you call people dimwits for doing what you do everyday and when called on it you bring
out your homophobic attacks. What a man you are BD!!!!! You proved your dimwit point 4 times!

Glenn

Subject: FT: Icom W31 dual band HT package for GP-68 or ???
Message-ID: <20010319214010.04307.00003938@ng-fi1.aol.com>
Xref: supernews.google.com rec.radio.amateur:1238

Greetings!

I would like to trade my nice Icom IC-W31 dual band (2m/440) handheld for a Motorola field programmable VHF HT. Will consider any 'commercial' (maybe even another amateur) transceiver that does the PL tone of 229.1 -- That PL is an 'oddball' tone, and most amateur transceivers do not have it. There are some exceptions. I would really prefer a GP-68 in good shape with accessories. My Icom W-31 comes with 3 batteries (2 BP-173 batteries, 9.6V @ 650 mAh, and 1 BP-171, 4.8V @ 700 mAh), speaker mike (clip is broken, easily repairable), leather case, and charger. I know some of the Alinco HT's do 229.1 PL, but not all of 'em. The W-31 has cross-band repeat capability, dual receive, etc. Nice rig. Please e-mail with offers!

73~~~

Ken
The problem might be is you don't have the correct PL set for the repeater you are trying to make a qso through. Ive been a Ham for a number of years and have yet been able to contact anyone via the calling frequency. Look at a repeater guide for your area note the PL code for the repeater then set it in. You can listen without having the correct PL set in but the repeater wont key up with out the correct PL.
Good luck
Lou

Don't count out the Icom 706. You can get a new 706 Mk2G at Texas Towers for

$904. Not an advertisement, just a report of my own experience.
www.texastowers.com

The Elecraft K2 is nice, but I doubt that you want to build your own but I could be wrong. Nothing wrong with the 751 or Azden either, but the 706 will give you all mode hf, 6, 2 & 70 cm in a nice, small box. the Yaesu 817 has the same coverage as the 706 but only 5 watts output. The 706 is 100 on hf & 6, 50 on 2, 35 on 440. The Yaesu FT-100D will get you the same coverage & power as the 706 but I didn't buy one because the 100 has had some very serious problems.

I also have an Icom 746. Hf, 6 & 2 at 100 watts on all bands. It's a bigger rig than the 706 but I've carted mine around with no fuss.

Get the 706 and a manual antenna tuner and for well under a grand you'll have it all... with a full warranty. The 746, which has an internal automatic antenna tuner for hf & 6, will set you back around $1400 give or take.

Hard to beat the Icoms. www.icomamerica.com

73 & good luck.

I have a callsign plate on one of my cars. Here in Louisiana the tag reads "ham operator" on the bottom. It's a nice touch and does stand out from the other cookie cutter plates.

A fellow ham here in New Orleans had his callsign plate stolen recently and, being so unique, it was very quickly recovered by the police. Yes, you can be looked up on the Internet call books. Yes, it could be a tip off that you have expensive radio gear in your car. I personally agree with others that it's being a pit paranoid. If someone wants to find out about you they can get much more info on you from your trash than from your license plate.

Get the plate and display it proudly. When someone asks you about the funny letters & numbers on the plate or wonders just exactly how one operates a ham, tell them about the great hobby/service of Amateur Radio. You just might have some fun with it. One year on the way back home to New Orleans from the Huntsville, AL hamfest we stopped at the Cracker Barrel in Birmingham, AL for lunch. One of the guys in our group still had the hamfest button on his shirt. The lady at the register said "What's the Huntsville Hamfest? I've been to Huntsville plenty of times and I've never heard of it. What do you guys do, chase pigs down the street or something?" True story.

Get the plate and enjoy. Mine is on the most conspicuous vehicle I own. It's a restored '73 Trans Am. I've had people come up to look at the car and walk away knowing a little something about ham radio.

73,

Don

You may have boogered up something on the board when you did the mod. Also, that ribbon cable is VERY susceptible to breakage. I know... mine is cracked now and parts of the radio don't work right anymore. I can still use it at least. You may have to send it back to Yaesu. My 530 lost it's mind when the cpu went bad. Yaesu had it back to me in a couple of weeks. Their service dept. is excellent! Mine will be going back there soon.

73 & good luck.

I am having a strange problem.

I have a FT-530 that I have modified a number of years ago, and it has always worked perfectly. I put it away for about a year and when I went to use it again, the display was garbled (I assume the lithium battery had died). I reset the radio and it is working normally again, but without the mod.

I have tried everything I can think of. I have reset the radio a number of times, then, holding the up and down arrows while turning on the radio but the mod will not reactivate!

How can I get expanded receive back again? This radio is worthless to me in its current condition.

Thanks, Don. The only problem with the 706 in a portable application is environmental - it's not designed for use in an open environment, as say the Yaesu 817 or SGC-2020 are. I plan to get one - I need a new radio in my truck! - but as a portable backpaking/camping/SAR/disaster radio, I don't think it will cut it.

I like the SGC-2020, but it doesn't have all the features of the Yaesu 817. The problem with the Yaesu is that it doesn't have the power I'd like - I want to experiment with field deployed NVIS, and 5 watts won't do the job. 10w will just do it, and 20w would really be ideal. Decisions, decisions...

Does anyone know of a portable, battery powered HF amplifier with around 20w or 25w output? That would be the perfect complement to the 817. I've done several net searches, and have yet to turn one up.

> I also have an Icom 746. Hf, 6 & 2 at 100 watts on all bands. It's a

Since no one really mentioned much in the "full size" part of my query, I did some looking and also found the 746. It seems to be pretty rugged - 100% duty cycle, for instance - and has all the bells and whistles I'd ever need. It will probably be my "do everything" radio.

Thanks again!

Subject: help,kenwood ts-930s,no output in SSB
Message-ID: <20010322115434.23441.00000286@ng-mg1.aol.com>
Xref: supernews.google.com rec.radio.amateur:1251
```

I need some help.I just got my first rig,a Kenwood TS-930S and i cant get it to work right in SSB,on AM and CW it puts out 100 watts and on upper or lower SSB nothing.If it have the MONI on and the PROC on it puts out 100 watts but with alot of feedback.Anyone have any idea on what i should do?I do not have a manual for my rig.
Thanks,
James

You do know that it won't show any output power on ssb until you talk into it, don't you?

I think you should take it back to the truck driver you bought it from and
demand a refund.

Greetings...

Took this in on trade, and have no use for it. First $210 via PayPal.com gets it. Unit is an HR-2510 in perfect operating condition with Astatic amplified microphone (Yeah, I know, I know...) E-mail me if interested. Payment by PayPal.com only, as I have some other obligations to take care of via Paypal.

It's many years since I held my amateur licence (G8JKP) and even then it was a "G8" so never got familiar with the HF bands.

Recently bought a Sony shortwave radio (SW7600G) mainly to listen to news items in my travels. It would be nice to catch up on some current amateur radio stuff too, so perhaps some kind person could post the best frequency ranges where I can listen to some "ham" voice transmissions.

My receiver does have ssb capability.

Thanks

Colin

I don't know a reference for UK, but here are two to band charts for U.S. hams:

http://www.arrl.org/FandES/field/regulations/usbands.pdf

http://www.icomamerica.com/downloads/bandchar.pdf

A few friends of mine (non-licensed) recently came across a pair of 2-meter handhelds that they intend to use as walkie-talkies. The radios have been modified (software mod, I think) so they can talk outside of the ham bands (from 136.0 to 143.95). Are there any frequencies available to them in that range? All the use will be taking place within about 1/4-1/2 mile of eachother. Can they use any of those freqs, or will they be better off getting licenses so that they can use the ham bands legally?

Thanks!

I have been listening to 10 meter SSB voice today,it seems everyone is calling CQ Contest,they only give a 59 report and a number.What is the number they give after the 59 report?Can anyone answer thier call for CQ or do you need to be in the contest?
Thanks,
James

I am without an hf rig at the moment (one is on the way), so I am not quite sure which contest is running this weekend. That number after the signal report is generally a serial number assigned to the contact (1st contact is 001, 2nd is 002, etc.) by the reporting station. Some contests use a 2 digit number corresponding to what year the station was first licensed. No, you don't have to actually be in the contest to work these stations. Just remember, these guys are trying to work as many stations as possible in a short period of time. I often do over 100 qso's an hour when working something like the November Sweepstakes or the International DX Contest. So be sure to keep the exchange short. Just follow the same format as
everyone else and keep some sort of log so you can keep your serial numbers straight. Go ahead and give it a try, these contests are addictive and loads of fun. I just wish I could be on this weekend. Good Luck!

These contests are kind of annoying for those of us who don't want to contest. Last couple of weekends there was no HF at all due to the solar flare activity which knocked out propagation. Now this weekend the propagation is almost back to normal but you can't have a real QSO because of all the frantic contest activity.

Has anyone ever called "CQ NO CONTEST" during one of these things? Is it a no-no? Would I get flamed? It seems the 12m and 17m bands are free of contesting, but my reception on these bands today is awful.

I don't see the point of making a 10 second qso just to get a (usually bogus) 59 report. I guess I'm missing something here.

(FYI: This contest is sponsored by CQ magazine and is described in the current

issue of QST also. It lasts thru 2400z 3/25. So after 4pm Sunday PST 10m
might be back to normal.)

Wayne: One question on how these contests work - Suppose I make a qso and
give the guy a "001" "serial number" and he gives me his, say, 657.
How does the contest board verify this qso and give him credit if I never
submit my log? Or does our qso get scratched?

```

Ah ... the utility of CW! Tune up on 30m, and have as many nice
ragchews as you please. No contesting, no splattering KW amps, just
good clean ham radio ... grin!

Just wait. The CW part of the contest starts tomorrow. Keep grinning!

```

I have seen this problem in older radios, & smoker's radios, where moving
your thumb around on the PTT mic bar transmits a "scratchy sound" similar to
someone crinkling plastic wrap. This is caused by dirt in the mic switch.
Usually, if you open the mike & give the switch a good aerosol shot of
"tuner/contact" cleaner, the problem is usually gone....

The USDOC has the spectrum allocation chart in PDF form downloadable online
or for order.  Go to:

http://www.ntia.doc.gov/osmhome/allochrt.html

I'm not sure how it would look if you printed it out.

Good luck and 73's.

Did you select "Fedex Priority Overnight" or something similar? ;)
It does give you about 15 different shipping options. No USPS, but I'd bet
there are cheaper options (assuming that $8.89 isn't the full price,
INCLUDING shipping-charges)...

It depends on the printer you use, but it's too large for the average
printer.. Even with good enough resolution, you'd need a microscope to read
it on an 8x11 sheet of paper.... ;)

Fantastic. I just ordered it online, from their website, for $6, on my credit card. Thanks, Glenn.

RECOMMEND a IC-751 if you can get your hands on it for HF (sure its old)
and a AZDEN Pcs-3000 (also old)

Both were installed in a Chevy blazer in 1988 on cold weather ops at FT
DRUM
NY and i rolled the blazer down an embankment
broke all the antlers went back to base replaced antennas
fired up the 2 meter and talked some 30 miles to watertown NY
and fired up HF and got Puerto Rico fist call on 20 meters

no brag just fact
don

Aren't they sorta large for backpacking, tho?...
Radio-Shack's selling a really small Alinco HF rig now, btw... I've no idea how suitable it'd be for backpacking, but it's one of the smaller ones I've seen in person, atleast... You should be able to find it at www.radioshack.com, and I'm pretty sure it was under $700 new...

For a back-packable unit, I don't think you can beat an Elecraft K2,
160-10mtrs with 10 watts out on SSB or CW They have a optional built in gel
cell battery that will run for many hours. If you need more output, there
are 50 and 100 watt amps that can be built on as well as a internal ATU.
(The amp requires an external battery) These are available as kits only, but
there are some professional builders who will put it together for you if
your eyes and hands are old. I believe the URL is
    http://www.elecraft.com

Hi,

   I just got an ICOM 746 and I would like to replace the stock hand
mic with a desk mic.  I am thinking of getting the ICOM SM-20, but
I'm going to need to save up my pennies again first ;-)

  In the mean time, I happen to have a pristine Turner Plus Three
transistorized pre-amp ceramic mic that's been sitting around for
years in a box.  Is it possible to wire this microphone up for use
on an ICOM rig?  Has anyone ever done it?  Would anyone
ever want to? :-)

  Here is some information from its spec sheet:
  Sensitivity: -23 db,
  Output Impedance: 5K ohms
  Amplifier Voltage Gain: 0 to 33 db
  Switching: "electronic" or "on-off relay"

  Any information, comments or criticisms will be greatly appreciated.
Thanks.

                   Richard

Greetings everyone,

I am getting ready to renew the tags on my car and was considering listing my call on the lisence plate. I am wondering what the pros and cons of this might be of doing this.

I can see a definite con here in that someone could search for your call on a site such as QRZ and know who you are and where you live. I have nothing to hide but this could be a bad thing.

What do you all think.

Franz

It just appeared that after a little bit all the bickering just disappeared.
It seemed as though some one had done some house keeping.(Don't know how
don't care to either just glad they did it. My point was that this was a
nice news group to read. Some one messed it up and now some one is messing
it up again. I was politely trying to ask them to move their complaints to a
more suitable location....like not here

Here in Lancaster County, Nebraska, those of us involved in ARES/Skywarn have been
requested by the local emergency folks to obtain call plates. The county
sheriff's
deputies appreciate not having to get out of there car in the rain to check on
cars
parked out on country roads during a storm watch. We carry emergency services
photo id too, but the plates serve as a preliminary id check, especially when we
are entering a restricted area after a disaster such as a tornado or flood.

A bit of paranoia is probably in order for those of you in heavily populated
areas. The plates can tip people off to the possibility of some high priced
equipment that can be easily ripped off.

My point is that no one did any cleaning... After you've been on the
internet awhile, you'll see that such comes and goes.. on nearly all the
ng's... I've seen posts such as yours, and a few weeks later.. same thing
starts over again..
The best thing to do (unless you can convince the persons' isp to cancel
their account or something, which I've seen happen) is to ignore it.. You
can extend the cycle by adding to it, iow.. ;)

Do not know about your state but in florida you can run anybody's
license plate for $1.00, and your drivers license is recorded as
doing the search. last time I used this was 4 years ago, the rules may
have changed. one of the reasons I have never had call letter plates
is the ease of identification. was going to put a decal I got from the
state police but decided that would only prompt some discouraged lad
to pummel my vehicle.. :(

Anyone can also use that publicdata website for a small fee..
Hmm.. I'm not sure what states are included, but I found mine and a
wreckless drivers' info on it one time a few yrs ago..
Besides.. I'd have to assume that VERY few people are even be aware of the
ham-licence data-bases on the internet..  Probably more out there who'd be
willing to pay for the info.

Someone with a scanner could hear you using your call and do a search
on QRZ and see where you live. Guess you'd better stop using your
call on the air, eh?

Oh, BTW... You don't think that tri-bander beam on the 80 foot tower
in your backyard would tip anyone off to the fact that you might have
some valuable electronics in your house, do you?

>What do you all think.

That you're being just a little paranoid...

I think your best bet is to list your callsign with a PO Box, which is
perfectly legal. Anyone who knows your name and knows you're a ham can check
you in the FCC databases and find your callsign info including address.

Yeah that's true. Oh well at least I had the decency to do it politely. But
now THIS discussion is going off topic. Thanks for the advice.

Subject: FT: Icom IC-W31 dual band HT for GP-68
Message-ID: <20010313232736.19187.00000531@ng-dh1.aol.com>
Xref: supernews.google.com rec.radio.amateur:1207

Greetings!

I would like to trade my nice Icom IC-W31 dual band (2m/440) handheld for a Motorola field programmable VHF HT. Will consider any 'commercial' (maybe even another amateur) transceiver that does the PL tone of 229.1 -- That PL is an 'oddball' tone, and most amateur transceivers do not have it. There are some exceptions. I would really prefer a GP-68 in good shape with accessories. My Icom W-31 comes with 3 batteries (2 BP-173 batteries, 9.6V @ 650 mAh, and 1 BP-171, 4.8V @ 700 mAh), speaker mike (clip is broken, easily repairable), leather case, and charger. I know some of the Alinco HT's do 229.1 PL, but not all of 'em. The W-31 has cross-band repeat capability, dual receive, etc. Nice rig. Please e-mail with offers!

Greetings...

I have a mint condition Yaesu FT-840 that I would like to trade for either an Icom IC-706 series radio, and FT-100, Kenwood TS-50, or Alinco DX-70T. Remote mount kit would be a plus in any of the above. I sold my IC-706 in a weak moment a couple of weeks ago, and really miss the convenience. Looking for either another one, or one of the other smaller rigs. E-mail with offers!

I notice that the service manual for the Icom 756 pro is on CD, and that one ham supply company offers it for $45. Has anyone bought this, and does it have enough information, or is it interesting enough, to be worth the price? (and is that a reasonable price?)

>What frequency ??.

every frequency between 1 an 20 MHz is OK

Supply: 5V
Overall stability: <=3 PPM
Output: preferable HCMOS/TTL

but i would prefer the folowing values: 4, 8, 16 MHZ

i think your thoughts go more toward 13 MHz, right ? ;-)

I recently purchase an IC-706 which works great except for FM. When I
key up radio in either HF or 2M FM --radio powers up for a second and
then drops to zero. I talked to AES tech and he said the FM oscillator
may need readjusted. Can anybody help me to locate the adjustment for
this. I don't have a service manual. Any help or suggestions would be
appreciated. I would take a service manual if anyone has one for sale.
This is the straight IC-706. AES service is backed up six weeks.

I have a kenwood TS-930S with no manual,this is my first rig and i am anew ham.I have a question about the power output of my rig.Is there a way to control how many watts i am running?Does the CAR have anything to do with powe output?How many watts should my rig put out?I know these must seem like dumb questions,but i dont know.I dont want to do anything that will mess up my rig.
Thanks,
James

On the main unit just to the right of the filters is a surface mount trimmer cap labeled C267, that's it. Spec is 3.0v at CP4, 29.1 mhz FM in TX mode.
Give it a few spins to clean it, NO CONTACT CLEANER OR ANYTHING ELSE.

I just got my call on my license plate and was considering the same question. I decided the average joe wouldn't know what the call was or how to link it to my name. And plus I think it's great to drive down the road and see a call sign knowing that you've crossed paths with another ham. And maybe you can catch him on his mobile. And besides in Alabama the ham tags look real sharp--a lot better than the standard tag.

No. As a matter of fact if you look at his origional post to which
I replied. and as the man said "if this is the kindof things i will
find on the ham bands,i wil be looking for a new hobby".

Just wanted to get him started in the right direction.

Just my opinion..

Bob

Anyone ever perform the extended range tx modification on the radio. I opened up my radio and followed the instructions according to those posted on the QRZ website and I am not sure where the diode is that they are talking about. Is it the surface mount component just below the (D16) label or is this diode supposed to be to the left of the label where the white brackets are? Incidentally if there is no component where the brackets are, it came that way!

This is Amateur Radio?...not everyone in the world wants an AK-47 in their
shack, and not only that, Gun Laws are a bit more restrictive in the UK.

In fact, I don't know anyone who has a gun of any type, I can't see that I
have a great need to kill anyone or do a house clearance SAS style in the
near future.

Thanks for the offer anyway.

You start with "This Amateur Radio?" and then... I think we should be asking you the same thing...
I'm sure you can find several "gun-control" and "pro big-brother" ng's to post your preaching in...

Fortunately enough, here in the Colonies we have chosen to keep our Firearms and Handguns although the liberal democrats would impose the same fate on us that the english goverment did to their people, Imasculation of the masses by disarming and rendering them defensless..

God save the N.R.A.

Just MY opinion

Bob

I always do a through background check on people I do business with on the net, because of the crooks out there and as a person who spent 3 years in Law Enforcement, I am naturally coucious of people. So, if people can't answer my questions or I can verify information about them, I don't do business with them. Secondly, it seems that he has a AOL account, which you could use to track him down if it came down to it, which still could be a PITA....and doesn't mean it did use a stolen CC for the account either. Pass him up, move on, and feel safe about the sale of your gear. Good Luck

I've got a question for the group,

What do you guys use for antenna lightening protection? I have a rooftop antenna. Is it necessary to intall lightening protection? I always disconnect my radio when the storm approaches. What's the worst that can happen(without lighten protection)? What kind of system do you recommend? Is it going to affect the antenna performance? Thanks

1) A good healthy ground

2) Yes.

3) Burn down your house

You need to get a good ground up to the mast or whatever you have for your antenna support. It should not be bent in sharp angles as you work it down to your ground rod(s). Multiple ground rods in a grid is probably the best protection, creating a ground "window".

As to antenna performance, you may actually improve it.

Can't static-electricity also build up in the antenna, which will fry your
rig and/or you when plugged into it, if there's no ground?...

I'm a new ham and i was wondering if this new Yaesu rig is a good one? Also, i want to know why would an HF rig come with only 5 watt output? is that enough to have worldwide coverage? is it a good buy for a first HF rig?
any comment is appreciated.

Where are they on sale for $199 ?  My local RS owned store knows nothing about
this sale ??

Hello
I am looking for some older Icom and Kenwood info. I was wondering what older
models of these radio have any or all or these features: digital voice
recorder, auto antenna tuner, VOX, and is over 100 watts output? PLus is good
for DX and limited contesting. Please email me direct at NZ8C@aol.com with any
info. Thanks!
73,
Renee NZ8C

Thanks for all the replies. If I get it correct, I need to connect the
antenna ground to a ground rod. What about the radiating element? There must
be electric charge buildup on the radiating elemnent as well. As I found
out, the antenna mast is coated with an insulating paint. So I need to
ground the mast separately as well, right?

Thanks

Greetings...

Still Looking for a good trade, after having many offers fall thru...

I have for trade a beautiful Kenwood TS-940SAT. Radio is cosmetically a 9.8 and a solid 10 in operation. I just like to trade radios! I am looking to trade for an Icom IC-756, Icom IC-746 (possibly), or perhaps a Yaesu FT-920 or FT-847. Any trade offers listened to. I VERY much want this to be an in-person trade, and will drive a reasonable distance to meet someone halfway. I am in Beloit, WI, which is 10 miles north of Rockford, IL. Anyone in Chicago, Milwaukee,

Madison or anywhere fairly close willing to trade? Please e-mail with offers.
Rig includes box in excellent condition and manual.

73, es gud dx de N9LXX~~~

R. Blaine Fox
Beloit, WI

Ooooh, I'm gonna' catch flak from the dedicated QRP'ers for this... (donning asbestos pants....)

The 817 is a nice little rig... I've played with a buddy's.. for convenient, low-power, carry-along ease, and backpack-ability, it's tough to beat for a rig that'll do ALL the bands.... BUT... in my opinion it's overpriced and under-powered. Unless you're a diehard QRP'er who wants to work the world the 'hard way', I think you'd be disappointed.

Since your call seems fairly new, I'd assume you're looking for a rig to use at home... If that's the case, I'd look for something with a better receiver (not a lot more $$) and more power (100w.. also not a lot more $$). For the price of a 817, you should be able to find a VERY nice used rig in excellent shape that does ALL modes, ALL HF bands and 100W.

I feel i should explain why i posted in this group...

I am looking for a MK14 computer, and in the late 70s the only people
building these were radio amateurs - hence my posting.

I beg to differ, in the late 70s radio amateurs couldn't abide these
new fangled things. They hated it if an electronic homebrew bod built
one in their near vicinity. Why?  cos of the RF hash they caused.
The RSGB was violently against digital modes, it wasn't until the
early 1980s that micros started entering amateur shacks in any great
numbers.

Mike.

If you ground the antenna mast, and the antenna is installed as instructions
directed, then the static issue should not be a problem.

Where can I get such a thing for ham band-plans which looks like a 'real'
poster, vs the large print-out my local ham-store gives away? I want
something for my computer/bill-paying/ham-shack room which wont look like,
well.. computer paper hanging on the wall.. ;)
Thanks.

Icom has a nice 8 1/2 X 11 chart for HF and one for VHF/UHF. Try contacting their offices in Washington, they have been very helpful in the past.

For a couple of bucks the Dept of Commerce Office of Spectrum Management will send you a real nifty US Frequency Allocation Chart that is about 40 inches wide and 30 inches high. Very cool looking. I ordered it off their site on the net. Very inexpensive.

Probably one of the best places to look is the Polyphaser website. Their book is well documented and tested.
Antenna cables should enter the building at the same point as does the electric company's line... and should be bonded to ground there (The Entrance Window).
The antenna should be bonded to the tower at the top and (in your case) where the cable leaves at the bottom of the mast (assuming that you're using a tripod roof mount). Running a separate ground wire from the mast?.. naw, the cable's shield will probably be sufficient (assuming RG8, 213, LMR 400, etc.)
As regards dealing with the center lead of the coax, Polyphaser's capacitivly coupled gas tube would be the best way to go, but I don't know what the lowest frequency you'll be using is and that may preclude using one of them. Probably best to use a coax switch with a grounding position and leave it there whenever you're not using the radio. Take note, many antennas boast that they are "DC grounded" which would seem to mean that they are also lightning grounded... NOT SO! Polyphaser goes through the motions to explain why and I've seen that phenomenon take out a customer's VHF Hi-band base rig's front end... no smoke of fried chassis, just lots'o deafness.
BTW, two ground rods are better... just make sure that you space them twice their length apart... it has to do with energy saturation of the earth... more Polyphaser stuff.
Oh, leaving the cable unconnected during a storm... put in a camera focussed on the floating end... the light show will be spectacular... just make sure to get the camera out before the roof burns through or you won't have any pictures. :-<

Hi
The ICOM one is also available as a .pdf file on their site.
At the bottom of this page http://www.icomamerica.com/
A copy shop that prints direct from disk can make a hard copy.

Just about any ICOM dealer will give you one gratis, whether or not you buy anything; and it is a handsome poster.

I use the C777 to charge the BP-200 for my ICOM T-81A HT.  Works very well -
as advertised.

Actually, if I remember right, CBers imitated a White Southern Trucker
when they started talking like that.

I am looking for an Icom 706 or radio with simliar coverage (HF+6/2). I have
the following items to trade for it:

Yaesu FT-221R 2m all mode radio
TenTec 2m to 6m transverter
2m amplifier 10 in 80 out
RCI 2950 10 meter radio with D-104 base microphone

If you are interested, please email me.

I tried that Claitor's site, and the price was $7.00 for the chart, but $8.89 for shipping. Seemed a bit steep, unless they had something else related to make it worth while.

Well, the recent earthquake here in the Great Northwest have prompted me
to upgrade my communication capabilities. So, I'm upgrading to General
and looking at HF gear!

I want the general Net Wisdom on the most durable (under transport and
field conditions) and reliable HF gear - current or not. I want 2 radios
- a back-packable unit, and one to be used for base operations. What do
you recommend and why? (URL's would eb a big help!)

Thanks!

Grant, KD7JNW (and hoping to upgrade soon...)

Hello all
I am considering maybe purchasing the Kenwood TS 2000 but was wondering how it
holds up to intermod and such. Living in a large city as I do this is a big
concern of mine. Also, how does the radio handle as a DXing/contesting radio??
Any and all info would be helpful. Please email me at: NZ8C@aol.com
Thanks!

I currently have for sale a group of 5 books on transistors/electronics, all in very good or better condition. The books are: (1) "Transistors: Principles and Applications" by R.G. Hibberd, published in 1965. The 304 page hardbound book is in fine condition, fresh and clean except for a Naval Research Lab property stamp on the title page and again inside the rear cover. (2) "A Dictionary of Electronic Terms" edited by Robert Beam, published in 1959 by Allied Radio. The softbound 80 page book is in very good condition, clean except for a previous owners name marked out inside the front cover. (3) "Understanding Transistors, Allied's Handbook of Transistor Fundamentals" by Milton Kiver, published in 1962 by Allied Radio. The 64 page softbound book is in fine condition, clean inside and out. (4) "Allied's Electrical Data Handbook" by Eugene Carrington, published by Allied Radio in 1956. The 64 page softbound book is in very good condition, clean except for a previous owners name marked out inside the front cover. (5) "The Practical Dictionary of Electricity and Electronics" by R.L. Oldfield, published in 1959 by the American Technical Society. The 216 page hardbound book is in fine condition, fresh and clean inside and out, in a very good dust jacket (some wear to the dust jacket edges). Available as a set for $8 plus $3 postage (book rate within the US, at cost elsewhere). If interested, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

Dave

Hello...

I have a Radio Shack HTX-10 25 watt 10 meter transceiver. The rig has performed beautifully. However, this morning I noticed this peculiarity... When transmitting on USB, I noticed that when I would key the mic without speaking, I appear to be sending some type of signal. This is not consistent.. After a couple of test presses, the S-meter would not register until I would speak which is normal. I also noticed that when I would jiggle the TX button around, the S-meter would erratically show a transmission w/o my voice. Any clues???

Thanks and 73s,
Vince, KD5FQF

Could you please take your comments to another place. Some one spent some
time cleaning this NG up and it would be a shame for all that work to go
down the drain.
Thank You
Chet Woods

Hmm! That's a good idea actually. Although, the electronics inside it look
very heavy-duty...
Could you explain a bit about how the signals are produced?   Does it just
transmit signals into the air as a stand-alone unit?   Could the signals be
picked up on a standard home radio?
There are some funny gubbins on the front: "Ext. Mod", "E" and "Sync.". What
do these terminals do?   And there is a jack plug socket called "Crystal
Check". That looks mysterious...   I'm tempted to plug it into an amplifier -
but I'm too scared.   It might charge 240 Volts into me...

Kenny

If you are a KWM-2 owner you may be interested in a copy of a manual that I found some time ago.

It's great for those who aren't used to operating and using vacuum tube gear and has a complete sequence of lessons on how to connect and operate the KWM-2 and also the interconnection and use of it with the 30L-1 amplifier and 312B-4 Station Control if you also have those items.

$7.50 postpaid if you're interested.

For more details and an example of a page see:
KWM-2 Learning Manual

Most likely they are.

There are radio frequency oscillator circuits that generate pretty low
levels of radio frequencies. Typically in the range of microvolts up into
the millivolt range. It is NOT intended to transmit signals directly into
the air. Rather the signals are "injected" by probes or cables into the
radios to simulate a received signal at precise frequencies and levels to
calibrate a receiver or transmitter section.

I suppose you COULD pick them up on a standard home radio. It depends on
the frequency range of the signal generator.

>

Your audio amplifer is NOT designed to amplify radio frequencies. Typical
audio frequencies run from the high tens of cycles per second up through the
low tens of thousands' cycles per second. Your standard amplifier may
certainly exhibit some very strange results. You may certainly damage it.

You wouldn't get 240 Volts from the output.

That was why I asked about you selling it. You see - I am a ham radio
operator and have equipment that uses this type of signal.

For your purposes you would be much better off finding an audio frequency
generator. Try Radio Shack's "commercial" catalog. Another place may be
Edmund Scientific or Ramsey Electronics. For that matter, go hunting for
circuits using a "555" IC timer chip. It makes a great oscillator in the
audio range. They are very cheap, plentiful, and work very well in the
range of frequencies you are interested in. Very easy to use.

Is the Hamcomm interface still attached? If so, disconnect it and see if
the problem still exists. If not, gain access to the jack and ensure the
shorting contacts of the jack are clean and making good contact.

My Half-Wave G5RV plus 40m traps is at 5m high (apart from a sharp deviation where my property ends!), managed the US and Caribbean on it, but not D68C...yet.

Looking for a blower for an amp project.
Dayton 2C81 will fit perfect.

Radioshack used to make a Simplex Repeater w/autopatch but discontinued it about 2 months after they put it out! All you had to to was plug the phone wire into the wall and the other went back to the repeater. Then you hook up the repeater to a walkie-talkie or other radio via accesory jack. I was looking for the same thing and that would have been perfect, but hey, what are ya gonna do.

Fellow Transmitter Hunters,

For those of you who have not yet heard, the first USA Amateur Radio Direction Finding (ARDF) Championships will take place in beautiful Albuquerque, New Mexico on July 31 - August 4 this year! This exciting event will bring in T-hunters from all over the U.S., as well as from around the world! In fact, the Chinese Radio Sports Association has indicated its intent to send a team to compete in this event, and we have received word that a team of ARDFers from Australia might join the fun, too! A 2-meter hunt, as well as an 80-meter hunt will take place during the Championships.

For those of you who DO know about the event, I would like to remind one and all that if you register for the 2001 USA ARDF Championships by ** MARCH 1st, 2001 **, you will receive a registration fee discount! There is only 5 days left to qualify for this price break before the deadline, so please consider registering soon!

Details about this wonderful Amateur Radio event, including an event schedule, information about Albuquerque, rules and a Printable Registration Form can be found on the world wide web at:

http://groups.yahoo.com/group/abqardf/files/web/index.html

We invite you to participate in this historical and extremely memorable and fun event. If you have any questions, please direct them to the core event planners at abqardf@egroups.com

73 and Good Hunting,
Brian, N5ZGT
2001 USA ARDF Championships Event Planning Team Member

4 years ago, I dropped my tower at the old QTH, and packed everything up to begin the transition to our new home. The new residence is complete, and I have finally gotten everything ready to raise the tower again. The old Mosley Pro-57 is still in the storage shed, but, since I always considered it the world's best vertical, I am looking for some opinions on multi-band beams. I am looking for the best 10-40 beam, so all opinions will be appreciated.

The 555 IC timer chip is excellent!!!! I use them all the time!! I stole hundreds of them when I left school.
I made a keyboard with 12 independant oscillators - one 555 chip for each note in the scale.   And there are 12 pots above note, which alter the frequency of the corresponding 555.   It is an experimental microtonal keyboard, to create new microtonal scales.
I've done loads of stuff with 555 ICs.
But I find that the 555 chips are too buzzy - A pure sinewave would be great...
But that's just 'crazy talk'...

Also - about the 'injection' of signals into a radio. How would I go about doing this?

Cheers,
Kenny

Such attenuators do exist. I have in the shack a 0-100 dB attenuator in 1 dB steps. It was manufactured by Pascall, UK, about 5 years back. I forget the price but it was quite expensive. Don't know whether the firm still exists. Built into a solid die-cast aluminium-alloy box.

Cable leakage does not increase with frequency - it decreases. Worst of all at DC and audio frequencies. Leakage occurs mostly at connectors. Use threaded types, not simple plug and socket. Impedance mismatch at connectors is no problem with attenuation measurements.

I have made measurements up to 160 dB at up to 5 MHz by comparison with variable attenuators. A 10 watt signal generator is needed.

Without any extraordinary precautions it is possible to make
measurements with an uncertainty of a few tenths of a decibel at
100 dB.

I have also made measurements with a precision of 0.001 decibels at
frequencies up to 10 MHz. Such measurements are necessary to
determining the loss vs temperature coefficients of components and
systems when it is possible to vary the temperature only a few
degrees C. A high precision is also needed when calibrating field
attenuators against laboratory standards.

Normally it is specified in the manuals for the equipment. Find a Sam's for any radio and take a look at what it shows for each of the radios in it. It is usually through a capacitor of specified value or some such method.

555 are "buzzy" because they are square wave generators. Go find an amateur radio handbook or some audio circuitry handbook for sine wave based oscillators. This could be done with "gasp!" tubes or even transistors using feedback techniques that cause the input to reverse phase direction (I know its poor description....) Ah - reverse the voltage and current direction! Thereby getting a sine wave in lieu of a square wave.

I have a pair of VHF (136-174MHz) GE PCS handhelds with charger and
maintenance manual available on e-bay:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1217264041

Auction ends March 3, 2001.

Monitors are killers.. but I had a lot of noise and I found out it was my
old modem.
Unplugged it and that was fine.
Strange hey?

One thing I do is change the monitor to a different display pattern... It's very interesting, turn your radio volume up and chnage the screen to a DOS window and the noise dissapears... if you need your computer during radio, this obviously own't work... I would buy a good video cable and put a few RF chokes on it to pull down some of the real high transitions....

Good luck, Michael K3MH

Does anyone know were one can get the optional "Voice Chip" for the
older IC-275 the one with PBT.

They cant be had from Icom any more..

Its for a blind ham...

Thanks, Glen

I guess that it must be quite expensive if you really get such accuracy as you later claim, even in a controlled constant temperature.

I also suspect that the VHF/UHF performance is not that spectacular and since the original poster did not specify the required frequency range, I originally asked about it.

>Cable leakage does not increase with frequency - it decreases.
>Worst of all at DC and audio frequencies. Leakage occurs mostly at
>connectors. Use threaded types, not simple plug and socket.

DC and audio circuits generally have a much higher impedance levels than 50 or 75 ohms used in RF circuits, so the capacitive coupling is a much worse problem. At very low frequencies the coaxial cable does not work properly as a transmission line, thus the isolation is not very good. However, due to losses at very high frequencies, the shield no longer act as a perfect conductor and you can get different currents flowing on the inside and outside of the shield.

>I have also made measurements with a precision of 0.001 decibels at
>frequencies up to 10 MHz.

I guess that must be the readout resolution in some comparative measurements but not an actual precision. A 0.001 dB voltage ratio is 115 ppm (0.015 %), so I wonder how this accuracy could be maintained, especially if some real power levels are involved heating the attenuator.

Absolute accuracy should not be confused with precision.

To measure attenuation within "a few tenths of a dB" (at any attenuation level) entails detecting a difference between two voltages which are a few percent different from each other. This is an easy job for any voltmeter. Errors are not due to the comparing voltmeter but to the measuring components, cables, connectors and layout.

Accuracy entails comparison with a local standard. There will be uncertainty in the local standard in addition to errors introduced during the comparison process. There will also be uncertainties introduced at each calibration level up to the International standard.

Precision is related only to local effects such as signal to noise ratios. It is relatively easy to detect a difference of 10 microvolts between two voltages of about 1 volt each. This corresponds to a precision better than +/- 0.0001 dB

I believe you are speaking about the RCSI RC-740X Band Unit Expansion Box. I just happened to have the brochure laying here. I received the brochure a couple of years ago I think. I have no idea if the company is still around.

Radio control Systems, Inc
8125-G Ronson Road

Hi Paul,

Precision, Resolution. These can be the same thing or different;
however neither are a statement of accuracy.

When my old Drake TR-7 VFO gets buggy, I might note some one at
47.1652 MHz and smile at the precision of that reading, and yet it is
off by 40 MHz (an errant 4 is showing). Lots of precision, lots of
error.

However, as your question lies dormant:

> I wonder how this accuracy could be maintained,
>especially if some real power levels are involved heating the
>attenuator.

which is a concern shared by any metrologist. The load is the defining point of a power measurement. The load must be known and with power applied - it changes.

The first, and simplest, solution is to over engineer the load's ability to "DISSIPATE" energy. (sorry to scream in your ear, but others here needed to hear that) That would suggest using a 100W continuous service Dummy Load to measure 10W period limited power measurements. Or simply measure the load under the power applied.

Attenuators, on the other hand, are not 100W and few are 10W devices. Most are on the order of 0.1-5W. So, I presume you wonder how to get one of these into the signal path of a 100W rig? You use a directional coupler to tap a portion of the power (and you need to know the portion, but accurate determinations are fairly simple) and feed that tap through the attenuator and add the coupling loss (or that portion) to make a total.

In short, you have a 100W Source, a 100W Load, a 20 dB Directional coupler, a variable attenuator, an attenuator Load (how many miss this one?) and a detector. You can now read applied power at a 1W level instead of the 100W level. And you can measure the variation from that level with reference to your 100W reading to the resolution of the detector. Resolution or precision could run quite high. A measurements of change would also find high "relative" accuracy.

Relative accuracy means you do not need to know where you are, or where you started in absolute terms, merely how far apart they are. There is an interesting implication here in this subject. As we are interested in attenuation, any measurement of an attenuator is both "relatively" and "absolutely" accurate. This is one of Gary Peach's link pins to the absolute measure of received power.

Oops...sent that directly to Mike.
 I was told via e-mail that setting up a personal autopatch on 2 meters was
not allowed but can't find where it is disallowed in the FCC rules. Can
anybody clear this up for me?

            Thx,

                Mike

Hi there.

Some time ago, a mod was published about the battery drain problem on the Yaesu FT50 handheld radio. I believe it was two SMD chip resistors that required replacement.

Unfortunately, my hard drive crashed, and I lost the details. I would be most grateful if these details could be republished, as my FT50 has this problem.

Thanks in advance!

Regards.

I have an old ZEOS Notebook 386 that developed dead batteries when I did not keep them on trickle charge. I carefully cut one of the 2 open and found that the batteries were standard 1700 mah cells that can be be obtained from various nicad sources and soldered together. I can sometimes restore the batteries if not hard shorted by zapping them, but zapped batteries never perform well after zapping, and must be kept on constant trickle charge as you can see from my webpage at http://www.ultimatecharger.com

My old Kenwood TH-205AT won't remember the three user programmed frequencies when the power is turned off for more than a few hours. I've looked inside for an something like an internal lithium battery, but I don't see anything inside that looks like a battery. The PB-2 Ni-Cd rechargeable battery is fine. I don't have the manual on the rig. Any ideas?

I'll be in London for the next 10 days, and am packing my new Yaesu FT 817 along. I hope to be QRV from the hotel room, and from the park on the weekend (if I don't freeze to death ... g!).

I've printed the repeaters, freqs, tones, etc from the RSGB site, but am wondering which repeaters are the most active? Are there points of etiquette I should know before I key up on one? Is there any 6m activity on the repeaters?

Finally, is there anywhere in the west end (Mayfair) where one can find electronics parts (wire, connectors, etc) if the need arises?
I'm hoping to get a wire out and make some CW contacts on the HF bands too.

73 de Dennis KD1JT

Good Question. I think I'd like to talk about it....

I'm from Florida:{) Truth is, I'm not a ham. But, I am a distant cousin. I'd probably say that I'm at best an aberration or variant on the theme. I started as a toddler when my Dad, an electronics specialist, explained Ohm's law to me on a napkin in the local Jack-in-the-Box. Funny thing, we never played ball or what I always envisioned other Father-Son's doing but it was a bonding event & I enjoyed it.

I spent many years working for Gov't agencies in the communications field though I'd rather not discuss it. My degree is in technical communications. And, I've studied amateur radio for a few years out of pure, unadulterated curiosity. I guess that's the definition of a hobby. Anyways, I decided that I should get my liscense. Why the heck not?

I'm pretty old-fashioned and try my best to hold on to my idealism. That's why it's disappointing when folks lose their temper (or appear to in text) on a good NG. Even the age-old code vs. no-code discussion tends to be unnecessarily controversial. It's quite simple to me. CW is, to the best of my knowledge, the most basic form of radio communication in history as well as extremely presistent. Hell, even James T. Kirk remembers morse code from his, "days back in the Star Fleet Academy";{) So there it is. I'm a hams worst nightmare: a non-ham who knows code! Ha!Ha!Ha!

Respectfully,
Drink

3 memories?... I've 4-5 local repeaters that I've never bothered to enter
into my radios' memories... It's almost faster to simply type 'em in than
bothering with the mem-channels...

Help! I need to raise some cash for a new rig, so my 737 has to go.

This near mint condition (has some dust and fingerprints on it) Icom 737 operates SSB, CW, AM, and FM. It has the auto antenna tuner, dual vfos, split operation, band pass tuning, notch filter, 101 memory channels and much more. Output power is variable from 10 to 100 watts on SSB, CW, and FM and 10 to 40 watts on am. This is from a non-smoking environment. Comes with the original hand mic with up/down controls, power cable, operating manual and optional service manual. Will come packed in the original Icom boxes. I will ship for $625 anywhere in lower 48 states. You can check out my feedback rating on eBay under the user id "kabeezy".
 Thanks for reading this.

Sometime ago I bought a 42-page interesting military manual that contains 81 frames of instructional material on the military equivalent of the above units. It appears to be to train the "average soldier" to be able to hook up the rigs and properly tune them to receive and to tune the transmitter and amplifier without flattening the output tubes.

For those who need a refresher or who have come into amateur radio in the solid-state era this is an easy way to quickly get up to speed on using the equipment. It might just save some flattened 6146s and 811s or 572Bs!!! It certainly will help you become more comfortable with tuning the gear and operating it effectively.

I'm trying to recover some of my costs of purchasing the manual and at the same time sharing the information.

For $7.50 I'll send you in the US, via First Class Mail, in a padded envelope a good quality copy of the manual, including the one foldout page properly copied on 11x17 inch paper. If you're interested, please let me know right away. I hope to have all the copies ready to ship by the end of this week.

See a sample of the material at:
http://www.geocities.com/k6sde/KWM-2_Learning/KWM-2_Learning.html

or if that got cut off this should go to the same place:

KWM-2, 30L-1, 312B-5 Manual

***I apologize if this is a repeat of a post made a few days ago. My
ISP has had some problems with the newsgroup
servers and I never found the posts that I thought I made and have
received no queries to newsgroup posts. I have had
several people on some of the reflectors (lists) who want a copy so I'm
sure there must be others out there.****

How sad & pathetic, this is the way that Richard Kendrick N7NT treats
someone when they present a different opinion of his!!!!!!!!!

Amateurs who display such conduct as this are a disgrace to the
amateur radio community & radio hobby as a whole.

>an clip from the F-R-S web site:
>
>Smells of REACT? For your information the "www.F-R-S,org" site has NOTHING
>to do with REACT other than it's author is a member of REACT.

This sounds familiar! REACT steadfastly claims that it has never advocated Channel 1 for emergency purposes. (Even though we have waved the famous FRS media release in their faces, they still deny it).

So here we go again. Like the media releases from last summer, we get a denial that this has anything to do with REACT. Same story, different package. (With a bright green background.) And, like the REACT and PRSG sites, it's either difficult or impossible to locate the individuals working the controls behind the curtain.

And we still have the same problem with this site that was evident in the June and July media releases from REACT:

If you advocate Channel 1 Code 0 for emergencies, there will be nobody listening. You should use Code 1, which is the same on all FRS radios that have CTCSS. (Those that don't have CTCSS are fading away, and are not likely to be used for emergency purposes).

Folks, the bottom line is that this lulls the public into a false sense of security. The comparison of FRS-1 with CB-9 is very inappropriate. Until REACT members dedicate themselves to monitoring FRS-1, they should stay out of the picture.

Websites are easy. Media releases don't take a lot of work. Posting to NG's doesn't accomplish much. The real EFFORT is turning on your radio while at home or driving, and monitoring singing kids, cussing kids, and endless call tones, in the hope that you MAY hear an emergency. Without a CTCSS code, who's gonna keep the radio turned on?

REACT abandoned Channel 9 years before it should have. The organization moved to the "Travelers' assistance" channel on GMRS, which REACT uses for its own internal purposes. There are not many travelers using GMRS, plus there is no reliable Repeater Directory for the public. So REACT is safe--you can claim lots of monitoring hours on your web site, but you don't have to *do* anything!

Recently, REACT has been challenged on this at the National level, as well as in e-mail to the "teams". REACT knows that if it seeks another Presidential Service Award for it's 40th anniversary (as it did for the 20th), it is going to run into stiff opposition. Magazines like Popular Communications have been alerted to what's going on with REACT. The ARRL and SKYWARN have been cautioned about getting dragged too far into the mud through their individual agreements with REACT.

I'm calling a spade a spade, people. This sudden interest in FRS is a selfish move with the goal of getting some free publicity, just as happened last June when the media releases were reported by several magazines. REACT has dropped from a high of 70,000 dues-paying members to 4,000. REACT is in a desperate fight to survive. It outlived its purpose about 1994. GMRS (as an emergency frequency) fell on its face. The last hope for the REACT organization is to turn to FRS and stir up interest with the public.

The problem is that REACT wishes to dump a lot of publicity-seeking words onto the Internet, without taking a leadership position by announcing that 300 teams around the country (4000 members) are monitoring FRS-1 for emergency traffic. If you simply tell members of the public to organize themselves into neighborhood groups, who needs REACT?

You don't move a string by pushing it. You have to get OUT IN FRONT.

Hawkins, Leef, are you listening?

Cell phones do some transmitting on a periodic basis to keep themselves registered in the tower switches. On the subject of cancer, there is a good article in Network Magazine about the risks of cell phone use. After all the tests, there was (of course) no conclusive evidence showing any heating of the tissues in the bodies. Granted, these phones run at round 1.9GHz, but put out much less than a watt (like around 1/3 or less), and they linearly decrease the output power based on signal

strength from the tower. Frankly, I would be a bit more worried about
placing a 5W 33cm HT to my head.

TV and Radio Tower Pictures!

Ever wondered where the television and radio signals you receive are generated? Our site shows you original pictures from the transmitter towers on locations in The Netherlands, Germany, Belgium and the United Kingdom. For many sites a photograph of the antenna tower and its surroundings and a detailed close-up of the aerial system is provided.

only if they are on to receive calls - if turned completely off they won't do this until turned on to receive or to call out - takes a mere moment to reacquire a cell in this case...

either way, the last thing I need in my car is a phone

Well, it is obvious that you don't know how to click and peruse a web page.
Go ahead, try real hard!

Sounds like there's a lot of truth to the small market share causing the price to rise. But, how much can it really cost to make a radio that works on 220 instead of 6m? As for me, if I was putting a "chunk" of cash into a single radio I'd want it on the freqs that are widely used. Kinda like Microsoft. Sure, I think Bill Gates is gouging the market, but, everybody's writing for microsoft...

I don't live in London so can't give info on the best repeater, but remember that you'll be operating under the 'M/' prefix as this is the current series being issued.

I heard a US Amateur incorrectly using a 'G/' prefix recently, not that we're all that bothered, but there's probably someone who'll moan down that way.

Try not to get too cold in the park!

I've got a Diamond D130J discone antenna mounted 10 feet above my second floor roof. I did a test, and found out that that I'm only get reception up to 1.5 mile away using my icom W32A with 5w output. The antenna I used for transmission is a magnetic mount on my car top. The area is you typical residential area with no tall buildings in sight. Now I'm kind of dispointed.What are your experiences, suggestions? Thx.

Hi,

I have a remote weekend home. I'd like to connect my computer to the internet from there.

I've got a cell phone and a yagi antenna. I get a strong analog signal,

but no digital signal. This works great for talking, but it doesn't help me connect my computer to the internet.

If I was able to get a digital signal, I'd have no problems connecting my computer to my phone using the digital connection cable. I've used this in the city and it works great.

I was wondering if there's any way I can connect the cell phone to my computer's modem? My phone has a jack for a handsfree head set. I'm wondering if I could fabricate a cable that would connect this jack to my computer's modem.

Does anyone have any experience with this sort of thing? My cell phone is a Samsung 3500.

Thanks,

Ken

Sounds like something's broken... I can do almost as good with two FRS
radios....
Have you tried re-testing it with the original antenna?
Do you have an SWR meter?... Because the Icom 'expects' a little 7" (or
whatever) rubber-ducky, well.. ;) I'd be willing to bet that it might do as
well or better than the 'stock' magmount...

Let me clarify a little bit. I have a receiver connected to the discone at home and I drove away in my car to different distances and transmitted using the icom.

You have a serious problem somewhere. Either the antennas/feed line
have a problem or the radio has. I am not sure what kind of setup you
are using as one antenna is on the house and one is on the car. Unless
there is a srious location problem you should be able to use 2 radios
with 5 watts output for several miles. Assuming the antenna is up 25
feet at the house you should be able to work another station in a car at
over 5 miles.

With reception only about 1.5 miles, I'd definately wonder... what band is the radio and what type is it (mobile, HT)? Does it have an RF gain, if so, is it turned up all the way? I can't imagine such a short distance on a VHF rig unless your antenna is just really really poor... I use an MFJ dual band 6/2m antenna mounted about 18 feet from the ground, with my house on the east side of the antenna and I have gotten as far as 135 miles away...

Fellow ARDFers/T-Hunters,

I would like to remind one and all that tomorrow (MARCH 1) is the LAST day to receive a $30 registration fee discount for the 2001 United States ARDF Championships! If you have not registered yet, please do so soon! All registration forms must be postmarked NO LATER than March 1st to receive the discount. So fill yours out and drop it in the mail ASAP!

Once again, the 2001 USA Amateur Radio Direction Finding Championships take place in Albuquerque, New Mexico from July 31 - August 4! T-Hunters from across the US, as well as the world (T-Hunters from China and Australia plan to compete!) are making plans for this event, which is open to ANY T-Hunting enthusiast from anywhere in the world.

More information -- and printable registration forms -- can be obtained by visiting the 2001 USA ARDF website at:

http://groups.yahoo.com/group/abqardf/files/web/index.html

Spread the word, and register today! Don't forget about the discount we are offering up until tomorrow (March 1st)!

73,
Brian, N5ZGT
2001 USA ARDF Championships Core Planning member

Michael- There must be something wrong- I regularly hit a repeater over 20 miles away with my FT530 with its rubber duck, and hit a repeater about 75 miles away when I am on a roof-top Cushcraft dual band. I can count on 20-25 miles when I use a car top magmount (Larsen),except when I am down in the valley.

Bill-W4BSG

Like the other guy, I too was confused with your problem....
Let me see if I have it correct....
1.. You mounted a Diamond D130-J Discone on your house roof (10ft above)
2.. You connected a receiver to it, inside the house.
3.. You drove down the road in your car with your W32A (I had one of these H/H's a while ago too) and transmitted back to the house, using a magnetic mount antenna on the car and connected to the W32A..... Right???

And you are saying your maximum receive range for the D130-J is what...1.5 miles??? That if the car went further than 1.5 miles you either lost it or your reception went downhill (so to speak).....??? And you aren't living in an area without any larger structures (tall buildings or hills) that could block out radio transmissions...?

I hope I got it right.... Well I will at least try to base my reply on the above, hopeful, facts.....

I just recently put up a Diamond D130-J Discone, like about 2 weeks ago
and I am very happy with its performance. VERY.
I live in a single level house and my discone is barely above the apex of

the roof, well to be honest, it is slightly below it - I just ran out and looked. The tip of the stainless whip only just cuts the apex in height, yet I receive everything... and how!!!! I love it.
I wont bore you with my recent problem but I had a receiver that never really performed that well on V/UHF and I tried many homebrew antennas to improve its reception. I mean to say,, it shouldn't be that hard to receive on a scanner/receiver,, right!!!
My final desperate attempt was to buy this discone as they get good reviews and nobody really has a bad thing to say about them. It still didn't work... To cut things short... It was the receiver that was a tad deaf at V/UHF.
I bought another receiver the other day and all is well. Believe me the discone really does the job and well too. It receives repeaters up to 70 miles away in this hilly country that I live in. Anything within 20 miles is literally "in my face" => full strength.

If you aren't getting similar results with yours mounted, probably twice the height, then you have to have a fault somewhere....
Check...
1. That the Discone is assembled correctly - It was like putting a metallic spider together for me...
2. That it is mounted correctly - Make sure it is not touching anything else and is away from any solid objects.
3. That the coax line/connector is correctly soldered and correctly plugged into the discone, with NO shorts (short to earth etc) or breaks in it.
4. That the other end (at the receiver) is same as No.3
5. That the receiver is on the "correct" frequency and correct mode of reception => AM or FM etc.
6. That you have the correct power supply to the receiver.
7. That the receiver does NOT have a fault in it.
8. That if all above is" A1" then are you suffering the same on all frequencies, not just from your W32A in the car..

Yeah... I know it is a "basic" list of checks but the first thing you should check is always "the most obvious". It's amazing how many people bypass this simple checklist only to curse themselves later when they find one of the above to be the fault...

Michael - I too have had some points in my life when an antenna just gives up on me and it's VERY frustrating to find where, how and why.
Twice now in the past 2 years has my 16 ft Dualband Brainer antenna, all of a sudden, just died down to about half receive strength overnight and transmitting would reveal that I couldn't hit repeaters even 20 miles away.
That's when I start at the most simple checks. The first being an S.W.R meter which gave some real wild readings. Both times it was corrosion between the centre lead and the outside braiding at the antenna end, even though the connector was up inside the metal tubing attatched to the antenna base. It was water doing it.... After cleaning and resoldering it, I then wrapped an insulation tape around the connector and first few inches of coax and its been over 12 months now and no problems... yet.

It sounds like you definitely have a "fault" somewhere..... I suggest that it is somewhere in the above checklist....

Good luck.......

You can't really compare his setup to a good repeater, tho.... ;)

Does anyone have a set of FT-One extender boards and cable that they would be prepared to loan (I'll pay postage etc) or sell?

My Ft-one is not at all well and needs urgent attention.

Many thanks for reading this

Paul, G0odp

In the right neighborhood, I can get a message 1.5mi by yelling really hard.

>Do you have an SWR meter?...

That would be my first suggestion. I found that most of the CB HT's I used back in my CB days didn't care much for my big antennas. They were getting nearly full-scale readings on the SWR meter. It worked much better to roll down the window and lean out with the original antenna.

Of course, just using the right radio for the job let me get ome use out of those antennas, and keep the air conditioning working. :)

Hmm.. A guy at my work-place's wanting to "talk to people around the world" on the radio, and.. that's about all he knows about ham-radio.. We only got together after he saw my license-plate and asked about it, and our scheds really don't match well enough for us to get together much more than when passing in the hall, so... There a "ham-radio for dummies" type book or something that gives a really broad description without getting into TOO much detail to start with?.. Those study-manuals are somewhat limited and that ARRL Handbook (which's the closest thing I've got in my library to what he's wanting) is a bit much to start out with, I'd think...
And what about websites/pages? ARRL is pretty good, but it takes quite a bit of clicking to cover it all...

I know that there is the TSB 99-12-9 fix for the Ford fuel pump noise. But, a couple of months ago, maybe longer, it seems that I saw an article in one the monthy mags about a mod that could be done at the same time that the TSB was being complied with that made the fix even better. Have searched the net in vain and have gone back thru my mags trying to find it with no luck. Does anyone remember the mag and month. Seems the leads were wrapped around a core along with installing the filters. Can almost see the picture from the mag, but sure can't find it. Any help will be be appreciated.

K7SAM

At the suggestion of those who replied to my earlier msg(2m transmission range), I got on the roof and lowered the antenna for inspection. I checked all the connections for shorts and faults, everything was connected properly. As I was measuring across the frequency range using the SWR meter, I noticed a very strange thing. Around 50M, with antenna lowered and placed almost level, SWR reading is below 3, as soon as the antenna is erected the SWR jumps to above 8. Also if I rearranged the cable a little bit, the SWR would vary 2-3 times around 50M. The above does NOT happen in 2m band. No matter how I placed the antenna or the cable, I would get consistent SWR reading around 1.6 throughout the 2m band. So it does not look like a cable problem, does it? Also, with antenna erected,it is about 2-3 feet away from a chimney. Is the metal cover of the chimney affecting the antenna somehow? I'm perplexed. What do you guys think might be wrong? Thx.

I still think the prob's in the HT setup, not your 'base station'.. Otherwise, you'd not be hearing anything (besides static) at the house, unless someone were trasmitting within the same 1.5 mile distance from you or with quite a bit of power, which I atleast assume isn't a prob......

And have you tried the same test with the antenna that came with/on the HT yet? I'd bet you'll see very much of an improvement. Lots of people assume that because a longer wire (ie the taller magmount in this case) often seems to perform better for receiving, that the same will apply to transmitting.. Not quite so, tho..

To check if the radio is at fault, try transmitting through the discone and see what kind of range you get - see what repeaters you can access with it. I would suggest that if you are able to access repeaters which are further than 1.5 miles that the problem wouldn't be with the radio or the discone. The next thing to check would be the antenna that you have on the car - they have been known to play up, particularly when you are mobile. When I used to run a 2m HT in the car I used to operate a 5/8 on a mag mount and used to access some of the repeaters at distances of up to 100 km, so don't be to concerned with running an HT in your ca, nor of operating using a discone at home. I am currently running a UHF HT through a discone and I can talk to a mate approximately 30km away - and there are some decent hills in the way between us - and on same discone, I can also on the odd occaision access a 2m repeater at least 100km to the South of me (BIG hills in the way). The SWR situation is a bit on the weird side, my gut feeling is that the antenna is being effected by interaction with the metal on your chimney - more noticeable on the lower frequencies than the higher ones. My experience on VHF and UHF has shown that if possible it is better to get the antenna at least one wavelength (absolutely must be more than a half wavelength) away from the nearest metallic object.

Cheers

Matt

HAMFEST March 4, 2001 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB and SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - March 4, 2001

LINDENHURST, LI - NY

On March 4, 2001 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $18.00 each table. Tables at the door are $25.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. Current ARRL/VEC fee is $10.00, exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704-0356

E-mail GSBARC info@gsbarc.org or visit GSBARC online at

>
>either way, the last thing I need in my car is a phone
>

Absolutely correct......

The first things you need in your car are
*gasoline
*an inflated spare tire
*a charged battery

(rest snipped)

*and finally, the last thing: A cell phone, in case something in the above
list malfunctions.

I am currently the list manager for three ham radio related email lists. Please
take a look at them if you have a chance! They are:

2 meter all mode - a list dedicated to all modes of 2 meter radio, regardless
of where you are at. This can include FM repeaters or simplex, SSB, packet, CW,
etc... to join, send a BLANK email to 2mallmode-subscribe@egroups.com or visit
http://egrops.com/group/2mallmode.

6 meter all mode - the same as 2mallmode, but for 6 meters! To join, send a
BLANK email to 6mallmode-subscribe@egroups.com or visit
http://egrops.com/group/6mallmode.

New England Ham - An email reflector dedicated to hams operating in New
England. Any topic is fine, as long as it is related to New England ham radio!
to join, send a BLANK email to NewEnglandHam-subscribe@egroups.com or visit
http://egrops.com/group/NewEnglandHam.

```

Please advise if you have. I responded to an ad he had on QTH.COM (Listing #93878) in which he had SEVERAL rigs up for sale or trade. I made an offer on an FT-847 which he accepted. He asked me to go ahead and ship it, and gave an address of:

Bill Turner
599 Midland Ave.
Staten Island, NY 10306

I became a bit weary due to his vague and infrequent answers to my e-mails, so did a bit of investigating. Did a reverse address search on him and spoke with someone at that address on Staten Island who has NO IDEA who Bill Turner is. Searched the QRZ database and could only come up with one call that matched, and that was in New York City. No luck tracking down a phone # there either. Thank GOD I haven't sent my rig out yet. I'd like to hear from ANYONE who has dealt with this guy.

His email is Bturner1957@aol.com -- What REALLY worries me is that I made a vague reference of my employment in the law enforcement field and that he could call me on my cell phone in the squad. AOL allows you to check the status of e-mails you send to other AOL users, and I see he read it, but no response at all from him.

Thanx in advance...and Bill, if you're legit, let me know so we can get on with the deal, and apologies in advance if it turns out you are legit.

73~~~

I am a happily practicing heterosexual BD. You are correct in I did have to block your E-mail to stop propositions from you. My ISP couldn't care less about your fantasy world BD, who cares if you complained to them? They deal with crackpots like you all the time. You were ignored again! As to a forged post years ago in the ham newsgroup you claim is mine, prove it was me BD. You are in lala land as usual.You can't and it is just a feeble attempt to distract attention away from your Whine Because People Don't Do It Like BD Thinks They Should. Do a DEJA on yourself and 95% of your posts are a Whine Because People Don't Do It Like BD Thinks They Should. Were all those hundreds not your Whine Because People Don't Do It Like BD Thinks They Should BD?

Sorry BD the world doesn't revolve around you. HI HI!

Your pal and best friend

Glenn

repost from several mnths back..
I've also several others, a few from other people, that I'll post later..
I'll add to the below, tho.. You do know what cyber-stalking is, doncha
glenn?...

If I didn't know better, I'd swear you had a crush on me, glenn..
The way you keep following me around..
Now, wait a min.. I don't know better.. "In this twisted world we live in.."
I'm not your type, tho, glenn.. Sorry (yeah, right.. GTH glenn..)
Now, I know why you're attracted.. uniforms, hand-cuffs, and stuff like
that..
I'm not that kind, tho.. Only a topic-cop..

And for anyone who has no idea what your prob is, I'll include the end of
our little spat where I proved you wrong and you then resorted to
name-calling.. Ok, glenn?
It's appended to the end of this post..

I knew you couldn't continue the argument, but that you wouldn't ADMIT
defeat...
"poking the dog"... Yeah... I guess that's the best one can get from the
looser nowdays...

Re-read my reply to you and show how what you said is correct.. OK?
You weren't "prodding the dog.." You thought you were winning the argument.

If it's data what format MFM, NRZ,etc. Telemetry from a radiosonde. The scope sample isn't enough. I listen to the sound and it reminded me of RADAR.I spent a few years aboard a small frigate warmin my butt by a mil-receiver and heard alot of sigs like that.Get that cold op site up and running and all kinds of weird spurous noises blowin' out till that puppy warms up. I love the blue arcing from cracked insulation.

Then again with heavy winds wiping through transmission lines or power lines, I've heard intermittant hums like that; or a power transformer going south on a pole somewhere. It's great conditions for QRP.

There's not enough sample to really tell. You need acouple samples to see the framing.

First you say "As usual, I'm not going to play your games, glenn.. This will be my last reply to you for this yr.."

You know what a public newsgroup is don't you BD??? DUH!

Now back to Whine Because People Don't Do It Like BD Thinks They Should. Do with our star!

Take it away.....................BD!!!!!!!!

Plonk!

Glenn

BTW, you can have your last now Whine BD. I give you permission.

Keep in mind though, next time you make a public spectacle with your Whine
Because People Don't Do It Like BD Thinks They Should. Do I might comment to
such. Tough luck BD. Don't whine or IGNORE ME!!!

2BTW, why the cross post to rec.scanners BD, this was about your anal HI HI!
Desperate of bad advise form you buddy!

And do you foresee things getting as crowded as CB?
VFH and above is kept uncrowded by the relative short-distance
communications...
But what if most of the techs were to go general?

My Gosh...

What Hath I wrought? I am the guilty person (of General Class stature, of 13wpm for those who REALLY care) who said 'Hi Hi...' And all of this from that simple post?!?! Wow!

73~~~

Nope.... no gettin' around the 5wpm requirement. A doctor's slip, proven deafness, blindness, nor even a death certificate will get you credit for 5wpm. The days of code 'exemptions' are as gone as the 13 & 20 wpm exams.

You should know better than to just type Hi Hi in a ham group!

My God! Have you lost your senses my good man?

Hi Hi!

Glenn

KB7PKC also a 13 WPM General as if it means squat! ;-0

The antenna on my Nokia 2170 has a very poor mechanical design, it's busted
again, and the only way I can see to fix it uses conductive epoxy ($$$$$) to
glue the knurled brass internally threaded sleeve back into the magnesium
(zinc?) case, which is stripped. I'm wondering if anybody has any ideas on
how to hack an antenna adapter, or a high gain antenna into this thing. It

has no antenna port on it currently.

The frequency is 1850 to 1989 mHz, if that helps any.

At those frequencies, is an antenna really needed?

Reply via E-mail if you will, I don't frequent this newsgroup

I'm looking for signal reports from various locations on this anomalous
signal.

http://geocities.com/brojongazette/frontpage/bj0201.html

As of this morning, Saturday Feb 17, 2001, HAARP began doing testing with
greatly increased FULL power. The transmitter can now be heard all day long
on 3.39 MHz. Very early this morning about 3 AM, HAARP could be heard at
it's "old" normal signal strength. About 4 AM the signal changed in both its
pulse timing and inter-pulse spacing. At 4:30 AM the signal strength
suddenly increased tremendously.

Unlike previous mornings, there was no regular F-layer daytime fade
out when the sun rose here in California about 6:45 AM. I continued to

monitor during the daylight. I have never heard the HAARP signal during the daytime before. The sun now rises in Gakona Alaska about 10 AM PST. The received signal again increased from about S5 to S9 at 10:05 AM. With sunlight at both the transmitter and receiver there is no F-layer skip to bend the powerful signal around the planet. This means this is an extremely powerful direct groundwave signal. And I'm only receiving the leakage off the side lobes of the antenna array.

Greetings,
I purchased a Kenwood TS830S and I have a question about neutralizing the
finals when they have to be replaced since I haven't done this in years. I
know you are supposed to use a RF Volt meter (which I don't have)BUT I seem
to remember using another receiver to do this as well I think I also
remember using a field strength meter also. Is my memory going or can it be
done this way? If I'm right can anyone give me a run down on the process.
Any input would be appreciated and thanks.

Actually, 50% power transfer under these circumstances.

A load conjugately matched to the source offers maximum power transfer, not maximum efficency. In receiving applications, of course, maximum power transfer (into the receiver front end) is the goal.

As a previous poster noted, when the noise floor is dominated by atmospheric noise(as in HF reception), then poor antenna coupling lowers the signal and noise by similar amounts and doesn't degrade the signal to noise ratio. When the receiver noise figure dominates (as at UHF and above) then good antenna coupling is more important.

Al,

As an alternative, on 10 meters... the grid current should peak
when you dip the final. It is neutralized when that happens.

Jerry

I invite you to check out the email reflectors I run:
```

2 meter all mode - an email reflector for all aspects of 2 meter radio from FM simplex to FM repeater to SSB to packet and more! There is no focus on any particular region, so ham operators from around the world are invited! Visit http://egroups.com/group/2mallmode or email 2mallmode-subscribe@egroups.com

6 meter all mode - an email reflector for all aspects of 6 meter radio! Similar to the 2mallmode list! Visit http://egroups.com/group/6mallmode or email 6mallmode-subscribe@egroups.com

New England Hams - a list that focuses on the ham in New England! All topics of interest are welcome here - HF, VHF, UHF, CW, SSB, FM, AM, etc... Visit http://egroups.com/group/NewEnglandHam or email NewEnglandHam-subscribe@egroups.com

Hope to see you there!

```

My Kenwood TS 530S broke. I have no receive and the frequency display
is out. However, if I set the switch to check HV, it indicates the
usual 850 volts. Any ideas what might be wrong?

This suddenly happened while I was just using it as a receiver. I
haven't keyed the transmitter in months.

Alan

>I vote for
>sending all those crappy import radios to a smelter in Pennylvania.
>

Amen!

I recently reinstalled my 10 meter rig in the car and I have been monitoring 28.085 (AM mode) while driving around. It is astounding to hear how many truckers are using this as a "company" channel.

I hear RTTY and voice announcements being made, but it appears that the truck drivers are chatting while going down the road within one mile of each other. Therefore, it is difficult to jam them or to get their attention. They probably have their radios at full squelch.

The latest QST addresses this issue in a 2-page article. If hams are interested in defending 10 meters against intruders (and want to do it "by the book" as the ARRL recommends), it will take a lot of stations monitoring to document illegal activity and help locate it.

A couple of years ago, I nearly had two of the truckers in sight. They were coming toward me and the signals were getting quite strong. They stopped transmitting just before reaching my location. I was going to get the names of the company and write the president. (This has worked occasionally in the past. Typically, the company president confers with his legal department and then sends the supervisors into the yards to check for FCC Type Approval on the radios).

Now, a question.......do we need a central clearing house for information so it can be tabulated by computer to look for patterns?

QRM

Has anyone ever had any luck receiving raw video signals from news helicopters?
I understand they broadcast in the 2000 MHz range, so most receivers are not
equiped for that frequency. What receivers, antenna's, ect. is needed to
receive the news helicopters?

Thanks

Jim, scanning in Portland, Oregon and loving it.

C'Mon man.  Let's keep it clean.
  I don't care if we call it professionalism or manners or ethics or just
remembering what they taught toddler today but nobody really wants to hear
this kind of language or bickering.  The two faux pas's on a NG are:  1)
mass posting's of "XXX TEEN SEX SITE" and 2) needless bickering and
profanity.
  Hams have a reputation for being skilled technicians with a gift for
communication and I'm sure that this doesn't show it.
        Keep a thick skin and a good sense of humor.

Where you from, man? ;)
Most non-hams, that I've come accross, have no idea what ham-radio is (that
is, beyond the guy 'hunkered' over a telegraph-key most seem to imagine)
while most hams know we're just a reflection of the rest of society.. That's
especially so if they've ever listened to HF for any length of time...

There 7 channels (presently) starting just below 2000 MHz and they are 17 Mhz wide each.

The modulation is wide band FM video. The New Icom R-3 handheld recieve will receive the video; however, before you run out and buy one remember the airborne antennas are very directional circular pol yagis. So if you are not in the beam pattern...you get no picture. Some copters use vertical pol omni antennas. The
majority use logic tracking controlled yagis on the birds to dishes at 1000 feet on the tower as a receiver. Power is 10 watts output

How do you expect to get such attenuations when cable leakage is much more than that above audio frequencies.

Hi,

Can anyone tell me what this piece of radio equipment does?   It is an old
Marconi Fm/Am Signal Generator.
I'm not a radio buff - I'm just an 'audiophonic artist'. I found the generator
on a scrapheap, and was wondering if it could produce any interesting sounds -
in a artistic / musical context?

Please enlighten me!

Kenny

Hello,
      Thank you for reading
      this message.

Problem FT 101 E

We have a problem with our
FT 101 E tranceiver from Yaesu.
During recieve mode in USB & LSB the sound
output on the speaker is very weak.
On AM-mode the sound level is normal.
From one to another moment te level in SSB mode
sounds normal en go's slowly back to a minimum level.

This problem has taken place since we used a Hamcomm
interface on the jack for external speaker for receiving SSTV.

If you now this problem please mail us.

please info...........

PD0GBJ@AMSAT.ORG
or via packet
PD0GBJ@PI8DAZ

You could try rapping it with a variety of mallets, to see how it resonates.
:-)

Its intent is to generate radio frequency signals to allow for testing and
alignment of radio equipment. It really isn't intended to create sounds.

I'd be more prone to ask what do you want for it? I have plenty of radio
equipment that I could use it for.

Well it's only an old thing that got chucked in a skip full of junk. The model
number is TF995A/5 - and there is a date stamped on it - 1981.
I thought it could make some nice sinewaves or something. I design 'sound art'
installations, you see - for galleries and stuff.

Could it be used as an oscillator to create sweeping radio tones?
If not - it might well end up as a percussion implement!

Kenny

Not unless you start re-engineering it to produce frequencies that can be
heard by humans!

Trying to cable a TS-940 to a Heath SB200. ALC no problem but the tx ground line from the SB200 is a problem.
The din plug drawing is not clear, nor any explanation on how the TS-940 accomplishes the switching.

Can anyone explain the op[eration and which pin will trigger the sb-200 for tx or is an external circuit required ?

Thanks David VA3MRJ

I purchased (used) a RF concepts 2M amp (45in-160out) rfc 2-417.

I used it with a yeasu dual band (VHF/UHF) but it seems to be attenuating the UHF receive considerably.

Has anyone one else experienced this, is it normal ? is there a fix ?

Higher the better but get the ladder line to at least 40', also add about 25' of wire to each end of it, and replace the pl259 to ladder line connector with a 4:1 balun and you should be ready to go !

Ken

You need to get a elmer (mentor) some older ham with lots of experience.

You may have a antenna problem as you can not cut down a bottom loaded CB antenna and expect it to work on 2M. Also if your not following proper protocol and etiquette when calling, could be your being ignored. Maybe as simple as not having the split set on the HT.

We all learn from each other, but getting started is the worse, and without the help of someone in your area, the experience may be frustrating.

The recommendations of finding a club are the best, but more than that latch on to someone in the club who is willing to act as a mentor for you.

To find a club, listen to the local repeaters on your HT look up the identifier (call sign) in QRZ.com this will give you a idea of who is sponsoring the repeaters in your area. From there you should be able to contact the club or person and get the ball rolling.

Don't worry we were all there once and have plenty of war stories to tell !

Good luck hope to hear you on the bands !

I would look very closely at the yeasu 8100.
It will do a lot for you !
its fairly EZ to figure out how to work.

small + a removable face plate !

I do everything from used it as a repeater for my HT when im running
around the neighborhood to working an occasional satellite contact. not
to mention its a great mobile rig !

I don't think you get what I was getting at.. ;) I've no idea what
percentage of the "ham community" the US amateurs make up, but if we're a
pretty small part of it, well.. there just wouldn't be as much money in 220
radios as with 2meter and 440 for the radio-makers...

I am looking for information on any and all nets that are conducted on FM and
SSB on 2 meters and 6 meters. They can be on repeaters or simplex. Please
provide the following info:

```
Time (with time zone and any time change due to daylight savings time)
Day of the week (or daily)
Frequency (with offset and PL if applicable)
QTH of net or repeater, club or call of sponsor, webpage link, grid square, any
other important info

Thanks for your help. This info will be posted on my website, shown below.

Hi Jim,

Funny you should mention this unit.  I was all set to purchase one and I opened
my big mouth to some other hams on a local repeater, asking their opinion on
it.  I heard more bad than good.
```

Cited issues were display problems when keying up and lousy support from Yaesu
after returning the units 3 times for warranty service to no avail of getting
the problem fixed.

Other hams, like yourself, have nothing but praise for the unit.

I am thoroughly confused on what to buy. I am considering the Kenwood TM-G707A
for a simple inexpensive radio. I realize it is not a true dual band but many
people tell me they use the features afforded by true dualbanders when they
first get them and then seldomly use them.

What to buy?????

Are there commercial bands that are VERY close to the 220Mc band?
The fact that 2m and 440 border on 2 widely used commercial/public-service
bands where there's a huge market might have something to do with the
out-of-proportion higher pricing of 220 gear.  It's that pricing and the
general lack of activity (in many areas) that makes 220 gear a bit of an
'odd duck'.

That's why it's often a waste of time to ask more than one person if you're
looking for "that's the one to get" answers... You're bound to get a
different opinion from each group/person you ask...
Instead, "take in" all the responces, ask plenty of why's, and make YOUR OWN
decision...

Because people don't want to follow 5000 links to other sites - they want to see all the net listings on one site... actually, I can't say that I've found ANY site that lists nets from around the country... maybe a couple 6m SSB net listings have nets from around the country, but most of the net listings I've found for 6m FM and 2m FM or SSB have only been listings of a couple local repeaters or groups, not a nationwide listing.

Next question, Mr "I have nothing positive to say"?

The Texas State Government is trying to make life hard for amateur radio operators. Here is one of several bills they have thrown at us recently:

By Hardcastle   H.B. No. 1492
77R6141 JAT-D

A BILL TO BE ENTITLED

AN ACT

relating to painting, marking, and lighting requirements for certain antenna structures.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:

SECTION 1. This Act may be called the LeClair-Jennings Act.

SECTION 2. Subchapter B, Chapter 21, Transportation Code, is amended by adding Section 21.069 to read as follows:

Sec. 21.069. PAINTING, MARKING, AND LIGHTING OF ANTENNA STRUCTURES. (a) The department shall adopt rules to establish painting, marking, lighting, and other visibility requirements for antenna structures that are at least 50 feet but not more than 200 feet in height above ground level.

(b) The rules adopted under this section shall be similar to the rules for antenna structures more than 200 feet in height above ground level under 47 C.F.R. Part 17, Subpart C, and its subsequent amendments.

(c) In this section, "antenna structure" includes the radiating or receiving system, its supporting structures, and any appurtenances mounted on the radiating or receiving system or its supporting structures.

SECTION 3. This Act takes effect September 1, 2001.

His address is:
Richard Hardcastle
Capitol Phone (512) 463-0526
District Phone (940)553-3829
e-mail: rick.hardcastle@house.state.tx.us

I have already written Mr. Hardcastle a letter informing him that this Bill is unneccessary, as these requirements are already addressed in FCC Regulations, specifically, Part 17.21.

All amateur radio operators who live in Texas should write to Mr. Hardcastle to express your opposition to this Bill.

73,
Paul N0JAA

Isn't the 220-222 Mhz portion used for telemetry now? Or is it GMRS? I can't remember.

I recently discovered, however, that I still have my old Kenwood TH21-BT 220-Mhz HT. Needs a new battery pack, though. If I can find one, I'll fire up that little radio and see if it still works. There are two 1.25-meter repeaters in the Houston area.

Blue? Why blue? That color is very hard for pilots to see. I suspect the city leaders did not think before enacting this ordinance.

>it was enacted originally to stop the prolifertaion of new Cell towers, but
>cuaght us Hams as well...

So is the Bill in Texas. But because it did not specify what kind of radio towers, all towers would have been subject to the proposed legislation.

FWIW all "pre-exsisting structures" were exempted a big rush in tower building ensued to beat the enactment date!!!

Can't say that I blame them!

BTW, a couple of local ham radio clubs in Houston started a letter-writing campaign. Mr. Hardcastle was inundated with letters from ham radio operators. Yesterday, he sent out a form letter stating that amateur radio operators will be exempted from the proposed legislation.

In my letter, I pointed out to him that FCC regulations already address this situation and that his Bill would be redundant, and that the Bill would be too prohibitive.

Greetings...

I have 'just missed' several of the above radios at a real good price. If you have one of these to sell at a good price, please e-mail me! Desk mic would be a plus with whatever rig you have to sell. I might even consider an FT-847 or an Icom IC-746 for the right price. Also looking for an MFJ 989C tuner for a decent price. Nothing over $175 for the tuner, please. Will negotiate. Prefer a seller that will take PayPal.com for a good tuner (doesn't HAVE to be a 989C) that has coax 1 and coax 2 bypass...

As I was reading the SWR and impedance of my antenna on my MFJ-259B, I start to wonder,

1. Does SWR even matter for reception? Now correct me if I'm wrong, since most radios have 50ohm impedance, as long as I got 50ohm impedance at a frequency on my antenna, I would get the best signal on that frequency regardless of what the SWR is at that frequency, right?

2. My magnetic 2m mobile antenna on my car is not really connected to the car body as a ground(it's insulated by the magnet and paint), how can it utilize the car body as a ground plane? Thx.

1. No. SWR will degrade the signal strength. A tuned or resonant antenna will delever the highest signal level to the coax. Impedance (match or mismatch) will affect the transfer of that signal from the antenna to the coax. The closer they match the better the signal will transfer and less loss there will be.
(hey ... this would be a great spot for a RF amplifier ... hint .. hint .. wink .. wink)

2. You have a ground connection thru the coax shield and power cable. Also there is some capacitive coupling due to the size of the base and closeness of the metal body. Works like a "thru the glass" mounted antenna.

SWR does matter for reception. That is why most quality receivers have "preselectors". These attempt to "tune" the antenna. If you "have" 50 ohm impedance, you have a match. The problem is that this occurs at one frequency or specific harmonics

> 2. My magnetic 2m mobile antenna on my car is not really connected to the

Your mag mount may not be directly connected to the car body, but the negative power lead to the battery is, in turn the shield of the coax is, and there is the capacitive coupling through the mag mount to the body.

The negative lead to the battery is tied by a large braid to the chassis of the vehicle. In essence the entire chassis IS a reference ground.

Michael wrote:
> 1. Does SWR even matter for reception?

Depends on what you mean by "matter". SWR reduces the available signal but it reduces the accompanying noise by the same amount. Most modern receivers have a wide enough dynamic range that SWR on receive doesn't much matter.

The capacitive coupling impedance to ground is low so it really is AC connected to the car body through that capacitance.

The SWR will have some effect on the reception, The only thing is that you have to measuer it from the antenna back to the receiver. Difficult for most to do as you can't normally put power at the antenna end of the coax and feed it back to the input of a receiver without burning out the receiver. The recievers probably don't have a 50 ohm input over most of the range anyway. Sometimes if a good preamp is used and adjusted for the lowest noise figuer (what you really want) it won't be 50 ohms anyway. Many times with moder receivers they will have so much gain that the mismatch will not be noticed by most hams.

The megnetic antenna base should from a capacitance coupling with the car body. If the base is big enough you get enough coupling the losses in the system are low enough as not to effect things very much. One of the main effects I have noticed is that at highway speeds some magnets don't seem to be strong enough to hold the base in place and the receive signal seem to have a lot of noise in it on a 2 meter FM setup.

1. The impedance seen by the reciever will not be 50 ohm if the SWR is not 1. It will vary along the length of the coax. You will still get a signal but it will be stronger if you get the swr down. Better still, forget SWR and tune antenna for best signal.

2, The magnet is one plate, the car body the other , and the paint the dialectric of a two-plate capacitor. The signal passes through this capacitor.

I can understand generals-n-above typing "HI HI" here, but why would a
tech?...
It's a shorter way of indicating humor with CW, and after getting into the
habit of using it on HF, it might seem the natural way to indicate such,
even when typing,  but HAHA or ;) is just as easily typed here, otherwise..

If you have a hearing problem, you can get an exception to the code
requirement. I am not sure of the actual process. I'd contact your local club
for complete info, or maybe the ARRL.

I can understand a net newbie complaining about somebody typing "HI HI" instead of YOUR preferred "HA HA" by why would a seasoned net pro?

Who would have guessed the Whiner of All Who Don't Do It Like BD Does It would be complaining about this?

HI HI!

BTW HI HI is easier than HAHA if you only have one hand or type with one finger. Less travel and such......but I am sure BD can straighten us all out on one handed stuff too. What a pro!!!

As you know , the input impedance of the load must match the output
impedance
of the source for 100% of the power to be transferred.
A high SWR affects reception as well as transmission, SWR is usually lowest
at the resonant frequency the antenna is tuned for.
Magnet mount antennas use capacitive and inductive coupling similar to a
thru-glass mount.
Neither of these antennas are very efficient for power transfer.
Top-loaded antennas see more of the signal before being attenuated by the
loading coil, this is why i dont like base-loaded antennas which attenuate
the
entire signal before sending it to the radio.

100% of the power is never transferred. Did you mean 100% of the
power available for transfer? :-)

Sorry.... there is NO EXEMPTION for the 5wpm exam and NEVER has been...
There USED to be exemptions for the 13 and 20wpm exams (which no longer
exist).

Have you tried the various free software programs for CW practice out? Many
allow you to change the pitch of the tone, if tone-deafness is a part of the
problem... (be sure to tell the Volunteer examiners this when you test).
You may need to 'Farnsworth' the dits &dahs more.... more spacing and faster
characters.... try a character speed of 15-18wpm with the text sent at an
overall speed of 5 wpm for learning. This too is something you can't get on
a tape... only on software or by finding someone willing to spend the time
with you to coach and tutor you in code....try a local club for more info

too, can't hurt!

As a VE, I've watched 8-85 year old folks pass code tests... as well as blind folks, retarded folks, one fella who was almost deaf, and one fella who was afflicted with Cerebral Palsy.... Believe me... you can handle it if you get a handle on it.

You still trolling for some male-companionship, are you, glenn?...
IOW, you not found any, huh?
As for using one hand.. I normally do, and still have no trouble at all with typing HAHA...
I simply press the shift key with my thumb and type HAHA with my small and bird-fingers...
Maybe your smaller fem-hands have something to do with your observation?...

I've the same type of prob... It took hrs of listening to be able to "hear" a letter instead of a bunch of dots-n-dashes.. because I couldn't start out trying to listen for each one individually like most seem to do.. After yrs of working in a very loud factory, trying to 'hear' the difference between a dit and a dot (or simple stuff like trying to 'tune out' individual voices in a croud, etc), well..... But after listening to a letter sent in CW many times, it starts "sounding like" that letter without having even to stop and think about it.. Sorta like being able to hear each note in rock-music (and "playing it by ear") as some people can..
You do have the option of even bypassing the new welfare-level requirements, tho... Simply blame your "disabilities" for not being able to accomplish what others HAVE accomplished with the same...

Why would you assume something like that. Do you fantasuze about men on the net often?

> > "Glenn" <glenn.hansen@usa.net> wrote in message news:d8Xj6.441281
> >
> > BTW HI HI is easier than HAHA if you only have one hand or type with one
> > finger. Less travel and such......

Gosh BD, you never quote all of the message you respond to. You always leave out the part showing you to be a little old woman telling everyone how BD thinks ham radio and the world should be. Why is that BD? If you respond to part of a post why are you unable to respond to it all? Why did you leave out where I said:

"I can understand a net newbie complaining about somebody typing "HI HI" instead of YOUR preferred "HA HA" by why would a seasoned net pro?
Who would have guessed the Whiner of All Who Don't Do It Like BD Does It would be complaining about this?"

Those two sentences say it all. Well almost all, we did skip your homophobic side.

Now tell us all again the world according to BD.

Your Pal

Glenn

As usual, I'm not going to play your games, glenn.. This will be my last
reply to you for this yr..
Anyone can use Dejanews and find your searches for male-companionship in the
other amateur-radio groups, where-as they wont find anything like that from
me.. And how original can you get, glenn? I complained to your isp (and
mentioned it in the ng several mnths back, which's also available thru
dejanews, I'm sure) about you propositioning me, and several others also
posted about you, glenn... Want me to start reposting it all again, glenn?

You're also still simply upset about me making you look like a baffoon with
your claimd several mnths back, I guess, glenn.. And I can/will also repost
that...

All right guys,. i've got my old Alinco DR-119 mobile rig here, set up in the house, 1/4 wave groundplane out the 2nd story window. Everything I hear on it (even the S9+30 repeater four miles away) has this weird white noise static type crap all over it. Sounds like white noise, but lower pitched (not as much high freq's.) What causes this? Intermod or what? i had it in storage for a year or two and broke it out....and this pops up. Is this fixable (e.g. by tweaking a pot or anything) or did i break the sucker? Alinco techs who can help me out get +5 karma. :)
actually, ANYONE who can help me out gets +5 karma.
reply via email to brojamesNOSPAM@ductape.net.
you know what to do with the NOSPAM part.

Hi,

Wonder if anyone on here can help me with a manual for a Marconi Atalanta marine communications receiver. I used one years ago 'in anger' during a stint as a ship's wireless operator in the merchant navy and I've recently acquired one for the shack!

Thanks,

John
GW3VVC

Hallo

I have a/m unit, but two question so please if you have more info please
share it with me ... !

1. does all units have CTCSS encoder / decoder (I have only encoder or I
dont know how to activate dec.!)
2. Programmable Scan Modes !?!?!? what does it mean and how it supposed to
work ?

regards

mail to : boyscout@eunet.yu

You obviously haven't driven through the rural areas of New York,
Pennsylvania, Illinois, Ohio, West Virginia and any other of the large
number of states in the Northeast then, as horse drawn carriages are
still to be found in these areas - in enough numbers, in fact, to
prompt highway officials to post warning signs alerting motorists of
their presence...

Is English a second language for you? READ the message. It says that there's only ONE code test now, for 5 WPM. By extension, that would indicate to any normal, thinking human being that there is no longer a 13 or 20 WPM requirement. BTW, the 13 WPM requirement USED to be for the GENERAL, not Advanced (which no longer exists) license...

wrong... any holder of an advanced class license may continue to renew it and
hold an advanced class license. What cannot be done is issuance of a NEW
advanced class license... Several friends of mine are going to keep their Adv.
licenses just because of the impending rarity of them...

Hi Folks:

I want to sell my HW 101. I just don't have the time for rag chewing and QSL hunting anymore. I thought I had enough time, but I am more involved with amateur rocketry now and need the time for building tracking transmitters on the VHF/UHF bands.

The 101 is in good condition, works on all bands, 80-10 and may need some tuneup, but I haven't had many problems with it. It was modified by the previous owners by the addition of a power switch on the inside of the upper case, a push button on, push off, to replace a failed original pot switch.

This unit is a workhorse not a pristine vanity piece. And it has "character" in the form of a leg missing on the CW filter switch. The power supply is decent, and the power cable is a rebuild.

Does anyone out there have any desire to own this unit? Please reply by email to cscholl@izzy.net

Thanks

Curtis Scholl

>Has the archaic road test requirement been removed from driver's
>license testing yet?

Not that I support the dropping of the code requirement (I'm currently learning CW so I can pass the test) , but people still drive on the road every day, thus a road test is appropriate. People don't use CW every day on ham radio... why isn't there a test for Packet or ATV? People don't use those every day, but why not test us on it? How'd you like it if you were required to put an ATV station on the air in order to upgrade your license?

First, make sure that the power supply is clean.

Second, make certain that your groundplane is properly connected to the coax.

It would be helpful to substitute power supplies, and then substitute antennas
(or hook up the rig in your car for test purposes).

Just a thought.
The idea behind Ham Radio is to be able to provide emergency communications.
If you can't even send/receive code what good is that(yes I am a no code
tech) Having a packet or even a TV station up wouldn't be the best use of
band space in an emergency. (Although it could provide alot of info really
quickly.

Hi All.

Just to say that Mako JA3HHT has released his Alpha test versions of his new
SSTV software called MM-SSTV. I have it on my download page if you are
interested in having a play :-).

http://www.btinternet.com/~g3vfp

Cheers,

Dave G3VFP

Apologies if this is not appropriate for this newsgroup.

I have a 2001 Toyota Avalon XLS with the antenna in the rear widow. I live in an area with lots of interference and was wondering if there was such a thing as a signal booster that I could install to improve reception.

Please email me direct if you know of such a thing.

Thanks in advance,

Doug

Greetings...
I've had a few bites, but nothing concrete yet. Still looking for offers.

Up for trade is a beautiful Yaesu FT-920 with TXCO board and FM board installed. I am the original owner of this rig, and bought it in late November, 2000 from AES Milwaukee. Includes original box and manuals in perfect shape!

Looking to trade for another 'Big Rig'...in particular a Kenwood TS-870S, Kenwood TS-950SD, or perhaps an Icom IC-756. For the right deal I'll throw in the matching Yaesu MD-100A8C desk microphone, also bought new in November.

Reason for trade? I just like playing with new equipment! Would prefer an 'in-person' trade. I am within driving distance of Chicago, Milwaukee, Madison, WI, or perhaps even Twin Cities area if you want to meet half way. Will listen to offers from anywhere, however. E-mail w/ offers.

73 es gud dx de N9LXX~~~

1st off, the code test requires (after June) ONLY 1 minute of solid copy out of 5 minutes sent... a 20% passing grade... It is the most basic form and simplest of all communication methods, requiring the least amount of gear... and your ability to turn on & off a radio wave and decipher its meaning.

> Having a packet or even a TV station up wouldn't be the best use of

Both of these modes require software and a computer for both stations to work each other... if the ATV repeater's tower is laying in the dirt, your VHF/UHF simplex ATV isn't going to relay much info very far without other stations doing the work for you. Agreed that more info could be passed in less time, but using these modes, far more depends on having a backbone of reliable stations as middlemen.... in my area packet is a shadow of it's former self... just node hopping across the county can be hard. Used to be a breeze to send 'email' across the country, but the 'backbone' isn't there like it was a few years back.

I would not reccomend using CW in an emergency when other modes are available and faster... in some far fetched case it may serve as the only option... I would hope a CW op was there in that case.

I am new to amateur radio, so if this is a newbyish question, that's why: There seem to be lots of mobile and handheld transcievers, of one, two or three bands, that cover 2 meters, 70 cm., and above. They all seem to skip 1.25 meters. Why? Does 222-225 mhz have cooties, or what?

john

>http://egroups.com/group/NewEnglandHam

Not a day passes that I can't scan the band and hear someone out there using CW. Granted, I don't use CW often, very rarely in fact. By that logic, does that mean that the person who drives once or twice a month or even once or twice a YEAR doesn't have to take a road test to get their license just because they won't be on the road that often?

I get tired of hearing all these crybabies boo-hooing about the code requirement. Christ, just learn the damned CW and be done with it. Nobody held a gun to anybody's head and told them they had to be involved in amateur radio. Nobody held a gun to any Tech operator's head and told him he HAD to upgrade. If you want to join the HF club, then you have to pay the dues, and that means learning CW at a rate of 5 friggin words per minute. BOO HOO the mean old FCC is threatening me with imminent death and dismemberment if I don't become a General Class operator, and they're MAKING me learn CW! BOO-HOO!!!! Grow up, be a man and just learn the code. What damage has been done? What harm is incurred upon you? BOO-HOO!!! It's too much WORK! BOO-HOO-HOO!!!

Why don't they make you take a packet test, or ATV test? Because, you idiot, these modes are handled by machine for the most part, and not decoded by a human operator. And before you remind me of the fact that there are methods of electronically encoding and decoding CW, I'll ask you exactly how many of the operators you PERSONALLY know actually utilize these devices. Yeah, that's what I thought. Hell, I've got one of them myself, have had it for three years now, and have never even bothered to wire it to a radio.

When I started my training in network technology, I had to learn about Token Ring networks, even though "nobody uses them." I had to learn about the seven layers of transport, even though I would never actually USE that information. When I went to college and earned my degree in Computer Graphcis, I had to learn pencil and paper drafting, even though "nobody does it any more." When I was in the military and was in tech school for meteorology, I had to learn Rawinsonde, even though "only a few locations" used it. When I was in high school, I had to pick a foreign language, even though I had NO intention of travelling to any French, Spanish, or German speaking country.
People, no matter what you do in life, there are going to be "archaic" and "needless" requirements. Regardless of whether or not you think it's a waste of time or effort, the ADULT thing to do is just go ahead

and fulfill those requirements. It's not going to kill you to learn
code....

BOO-HOO!!!!

220 does seem to be an under-utilized band. My understanding is that
it was mostly used as for packet backbones - and maybe still is. If
you look, you'll find a fair number of 220 handhelds, but they are not
as common as 2 meter and 70cm rigs.

>

What I mean is every operator doesn't use CW every day. Obviously phone is the most used mode so why pick CW, out of all the other modes, to require it to be learned... most of the operators I know don't use CW, even those that are general or above...

>> why
>>isn't there a test for Packet or ATV?
>
>there are some didgital mode questions in the question pools...
>

Yes, but there isn't a requirement to know how to actually do anything with those modes. All you have to do is memorize answers to pass the written test. Can you imagine if you walked into a VE session and there was a 2m rig, a computer and a packet modem and you were told to get those items on the air... if you are like me, you'd be lost because I never have used packet... so why test on modes that aren't used every day?

No, that's not "THE idea".. it's ONE idea.. I don't do ANY emergency
communications with my equipment. It's a hobby for me, not an emergency radio
station.

That's not what I am saying... I am fairly confident that every ham operator, at one time, worked nothing but phone. All other modes came later. Why test on an optional mode? If you're gonna test on CW, you should have to test on Packet, AMTOR, SSTV/ATV, Satelite, EME, etc... and I don't mean questions on the written test, I mean actual hands on performance... what makes CW so special?

Someone mentions less equipment, but you still need extra equipment over your basic radio.

Then again, CW isn't required to get a license, only to upgrade, so I guess there is some argument for it... but to go above general, you should have to be proficient in some other modes as well, to balance the scales...

In any case, I am learning the code and if I get off of my ass and really crack down, I will be ready to upgrade by next month.

Doesn't the lack of radios have something to do with 220 not being available
in other countries?
I was once told that by an older ham, anyway... I've never bothered getting
a radio for it, but he's always tried to get more people to use it, has even
set up several repeaters in the area, etc.. just to do his small part to
keep from loosing the band someday, but.. Who knows.. I've never heard
anyone on it at all when scanning...

The 220 amateur band is only here in the US. The rest of the world does not allocate that band to hams. Therefore the profit margin is not there to make zillions of em.

Now, granted the FCC has eliminated the code requirement for the higher licenses, and you still have to take the code test for the General or the full Technician licenses. 5 words per minute, I think just about anyone can learn that.

And yes, many operators still use Morse code on the HF bands. And I DID take my code test to get the original Novice license before there was a no-code Novice. I do know my code, although I must admit I haven't had much opportunity to practice it lately.

Be that as it may, even if the code requirement is completely eliminated (I hope it is NOT), that is no excuse for someone to discount code. And don't use that as an excuse to not learn Morse Code; it won't wash! It is still a useful mode, and can get through when other modes can't.

One question: what is the FCC going to do with the remaining 2x2 calls in the Advanced class callsign pool? Will they be used for Extra class? Or will the remainder simply not be issued?

Good question... I would hope that they issue them to Extra class
licensees - would prefer to not see them issued to General Class...

Doesn't sound reasonable to me. After all, NORMAL VHF users wouldn't
expect to try to work DX with a VHF rig. Sure, it's possible, but
most VHFers are content to use them for local, short-range
communications. You'd think that there would be a large enough market
of licensed Amateurs here in the US and in those countries that DO
allow operations in the 1.25 meter band that there would be a decent
selection of radios to choose from...

I tried to send this direct just after the original posting. This morning it was returned as undeliverable.

It seems as though from the responses here that many have short memories or have not been around hamming and the 222 MHz band in particular. So I thought I'd go ahead and post this.

=============================

In Japan and much of the rest of the world there are not the ham bands in the 220 MHz region. Thus there's a very small market and demand for the rigs. In addition the US band has lost 2 MHz from 220 to 222 not long ago, again decreasing the attractiveness of the now narrowed band.

As a result few manufacturers make gear for that band due to the small market and no demand in the home market. And we all have the advantage of a band with similar propagation to 2 meters with much less congestion.

I don't think I unplugged the cables when I did the filters.

I'd try to lift the board and solder the 4 pins without unplugging.
But, if you have to, the plugs all line up at re-assembly time.
(They've been in that position long enough to resist shifting position.)

INTRODUCTION

Hello again,
my name is Vladimir and my HAM callsign is YZ7REA.
This is my second addressing to the general HAM population worldwide in regards to this project. For those of you that are familiar with the project goal I can say that I'm not gonna bore you too much. But on the other hand I'll give a "short" brief about this project for those that don't know whatta heck I'm talking about.

"TM-V7 WIRELESS REMOTE"... Sounds interesting? Well it sure is!

And it's simple too! For all of you that are familiar with this KENWOOD mobile radio and own/would like to own one, this project will open a whole new view. The goal of this project is to separate the detachable front panel from the radio and establish the digital communication between them at distances of several miles or even more. Why? For many reasons. If you live in a heavily populated area and have problems with TVI, live in an area where the density of HAMs is big or you just wanna be "on a top of a hill" and be able to make contacts at larger distances without using a lot of power or spending a lot of money on directional antennas, rotators and tracking/positioning systems this project will give you all that you need.

DISCLAIMER

Before I go further with explaining how the system will work I have to say that this project will NOT be in compliance with laws in some states or countries. Respect that as you respect the HAM code that prevents you from transmitting outside the boundaries of amateur bands. First of all let me tell you that I won't be selling this system to anyone nor will I sell schematic diagrams or any PCB's etc. This is my idea and I want to share it with HAMs worldwide. So, what you choose to do with it is your own business. All I ask of you is that you mention my name and callsign if and when you post any info about this project on/in discussion forums, publications magazines etc. Second, if any of you should choose to use my idea for commercial purposes I ask that you write me an e-mail notifying me about that. Third and the last, I'm not going to responsible if any of you choose to use this system even if it means breaking the law in their country/state.

TECHNICAL STUFF

I'm working on the system whenever I have spare time on my hands (and that ain't often). So, I'll keep you informed as the project develops.

1. General info

According to the KENWOOD TM-V7 service manual the four pins that you can see when you remove the front panel (LCD/control unit) are:

```
-----
[ o ] pin 4 - 9.6V
[ o ] pin 3 - GND
[ o ] pin 2 - Data out
[ o ] pin 1 - Data in
-----
```

After measurement with an oscilloscope and volt meter I found this data to be TRUE. What you should know is that data communication is asynchronous with speed of 3125 bps (3K2). The control unit checks to see if the panel is connected to the radio every 0.5 seconds and if it misses two counts it assumes the panel is taken off and shuts off the radio. So, this means that you need a FULL-DUPLEX link to be able to connect these two together. The easiest (I'm not saying the best) way is to use pair of full-duplex radios on 900MHz, 23cm, 13cm or any other band that has a "amateur digital communications" slice of the spectrum in it. Of course you have to be sure to use the band that is legal for this stuff e.g.: packet radio link freq. I'm using a 3cm ATV FM transmitter with 5 sub carriers on each side and no video "carrier". You can use any carrier from 5-8.28 MHz. You'll need to relay the following signals from the CONTROL PANEL to the radio:

1. PTT, UP and DOWN button control*
2. MICROPHONE
3. PANEL DATA OUT (3125 bps)
4. DATA TERMINAL TX
   (connection from PC, packet modem, SB etc. max. 9K6)
5. AUX (used for remote switching of PA's etc.)

You'll need to receive the following signals from the radio:

1. VHF RX AUDIO
2. UHF RX AUDIO
3. PANEL DATA IN (3125 bps)
4. DATA TERMINAL RX
   (connection to PC, packet modem, SB etc. max. 9K6)
5. AUX (used for remote switching indication etc.)

* Three button control via a single wire/carrier can be achieved by using the 3 different tones. Something like CTCSS, but they can be any frequency even hearable from couple of hundred Hz up to couple of KHz. By using a PLL DETECTOR on the other side you can precisely determine which button/key has been pressed.

2. Transmitter(s)

You can use many solutions from cross-band (example 23/13cm) to in-band full-duplex radios. I leave this to you to decide. As I said I will be using 3cm amateur microwave radios, both for PANEL and RADIO side of the link. Small antennas, little power, huge gain, simplicity of construction, great directivity and the most important thing good frequency separation in free space at antennas just couple of feet apart are why I decided to use this band for my project. As little as 10mW and a 36" dish will cover the distance of more than 15 miles if line-of-site is present.

3. Receiver(s)

Commercial LNB's, SAT dishes and SAT receivers with small mods can be used.

4. MODULATORS/DEMODULATORS

This really depends on the type of radio that you're planning to use, but bear this in mind. All the signals you need to relay are in fact NBFM signals. This means that you DON't have to use WBFM sound carriers like I did. There are certainly much better solutions than mine but this one, as I said before, was the easiest one for me since I already had some equipment that I wasn't using.

5. COSTS

This is also very relative, but if you use some old uW equipment for 3cm like I did it comes very cheap to have such a system. All taken in consideration the total cost for this system shouldn't exceed $150.

5. LIMITATIONS

Laws that prohibit this type of data transfer, line-of-site is a must, very bad weather like heavy rain, snow thick fog etc. can downgrade the system reliability. More than one TM-V7 WIRELESS REMOTE system at the same frequency in each other signal path can probably interfere with each other (I haven't tried this). And probably more...

6. BENEFITS

Just think about it for a sec!

Well I'll rap it up for now. Feel free to ask any questions regarding the system, but please don't ask for any schematics 'couse I still haven't drawn them yet. They're all in my head for now. I'll probably put more info on my web page later on once my system is up and running and monitored for some time.

****

I'd like to thank KENWOOD for "helping" me with this project and directing me to the nearest KENWOOD dealer to spend $40 for the Service Manual. Also thanks to KENWOOD technical support who told me that if they gave me the DFK-3C for this project they'd go bankrupt. :) I know that they get all kinds of weird requests every day, but I also know that every Tom, Dick and Harry don't make something like this and share it with fellow HAMs all around the globe.

****

As for me... No medals please! :) I'm proud to be a HAM!

Your HAM friend from YU-land
YZ7REA Vladimir

No! No! No! Big brother can see you through the cameras disguised as
spiders
on the wall! Just kidding.

Actually... That burst contains a powerful subliminal message. Hypnotizing
you
into calling this secret 800 number where you register (if you have a
touchtone phone)
your name, time and frequency you herd the signal.

Or it could be the pesky Russian "Woodpecker" signals transmitting their
deadly, earth quake
causing scalar EM waves!

-LOL

Greetings...

Up for trade is a beautiful Yaesu FT-920 with TXCO board and FM board installed. I am the original owner of this rig, and bought it in late November, 2000 from AES Milwaukee. Includes original box and manuals in perfect shape!

Looking to trade for another 'Big Rig'...in particular a Kenwood TS-870S, Kenwood TS-950SD, or perhaps an Icom IC-756. For the right deal I'll throw in the matching Yaesu MD-100A8C desk microphone, also bought new in November.

Reason for trade? I just like playing with new equipment! Would prefer an 'in-person' trade. I am within driving distance of Chicago, Milwaukee, Madison, WI, or perhaps even Twin Cities area if you want to meet half way. Will listen to offers from anywhere, however. E-mail w/ offers.

73 es gud dx de N9LXX~~~

R. Blaine Fox

Xref: supernews.google.com rec.radio.amateur:952

I am looking for other IC-V68 owners to help me. I recently bought one and I thought that it had the optional UT-86 board installed, to allow for all PL tones. I can not get into any repeaters with PL tones. I have selected the PL tx tone by hitting FUNC-8 and turned on the tones with FUNC-1, but to no avail. If the UT-86 board wasn't installed, would I be able to select tones? How can I tell if the board's been installed?

Any help from experienced users of this HT would be appretitated. Thanks!

My nicad seems to have died for the FT-470.

Does anyone know of a source for a new one?

TIA

FS The 270G3 in decent/ average condition. No holes or dents.Nice sounding
Jensen Speaker too. I was going to eventually have it repainted and regrilled
but I have no A4 so decided to part with it. first $285 shipped UPS. Thanks

I dug out my old 3200A, and discovered that the display is mostly
unreadable - missing segments - but all seem to be functional. Any ideas?

I'd also love to have a manual for it - or even a "cheat sheet" for the
vfo's and functions.

Don't you think that if we were interested in getting such off of ebay, that
we'd have already looked there?... That IS why they have the ability to
browse and search thru/for the different items for auction, you know?...

>>
>> QRM

Yep. I've worked through such repeaters numerous times. Operators using 2-meter
handhelds can access a repeater which connects them to 10 meters.

One of these was the W1OJ (Orange Juice) repeater. I don't recall the others.

Good idea posting your auction to the group. Many of us don't frequent E-bay
or the other auction houses but might find something being auctioned to our
liking. I picked up a great receiver due to a fine gentleman posting his
auction to the newsgroup..

Good luck in your auction.

Glenn

Did the FA in his subject line confuse you BD? It means FOR AUCTION. See BD, the word FOR starts with the letter F and the word AUCTION starts with the letter A. Put them together and you have FA which stands for FOR AUCTION. For many years now FA in the Subject line of a USENET message means it is a post containing an announcement about something FOR AUCTION. See how that works? Simple isn't it? No harder than not reading any messages that contain FA (means FOR AUCTION) in the Subject line. You can even set up a message rule in Outlook Express that will eliminate you from ever going through the agony of being FORCED to read a FA message again. If you need help setting it up let me know. I will be more than happy to assist you with this project.

Your Pal,

Glenn

Greetings...I know what the connections at the mic connector on the
FT900 need to be, what I can't figure out is what is the pin
configuration "inside" the mic base, one thru six! Thanks....

Hi guys.

Just to say that JE3HHT Mako's latest RTTY software release of MMTTY Ver
1.61E is now available for download from my U.K site.

http://www.btinternet.com/~g3vfp

Best Regards,

Dave G3VFP.

I have a beautiful condition 475 scope except it doesn't work and I don't have
a maint. manual - yet.

If you have a manual maybe you could offer a suggestion to what is the problem
to my scope.

Voltages missing:
+5

+15
-15
Incorrect Voltages
+50 V is 12.3 V
+110 V is 90 V
Ungregulated +50 V is +66 V

The internal fuse F1318 is ok
Of course, the mail line fuse is ok.

The only lights that will come on are the uncal lights on the front of the scope.

It's obviously missing some primary voltage.

Any ideas?

Thanks,
WA4QGA

I got my license almost ten years ago....haven't touched a radio in three years. What's radio like these days? Especially lookin to talk to Arkansas hams. I'm 21 now and have some time to play with it

again....still got the old Alinco 119 rig. hee hee. how many hours i
burned up on that on 146.58 in North Carolina.....
also, i lost my license. how would i go about getting it renewed?

Hello Jim, I'm not familiar with archaic code, but the Morse code is
still a requirement in the USA and Canada.  Go ahead and learn it
because you now get some ROI, but don't plan on using it at 5wpm.
That's frowned on.

73, Brian/N0iMD

uhmm....  Why ask here when you can simply turn the radio on and/or find a
local club?...

Licenses can now be renewed at the FCC website (free) or through W5YI (fee)
or by visiting on of your local VE groups and have them help you with the
paperwork.
You may also be interested to know that you can now 'choose' your callsign
via the Vanity Call application program (started a coupla' yrs ago).

Licensing has been restructured as well in the last year...Tech, General &
Extra are now the only license upgrades available and 5wpm is the top code
speed required... you may want to look into an upgrade!

It's getting there. There's only one code test now, and that's 5 WPM for the
class of licenses that require it.

No, but we've removed archaic, horse-drawn carriages and I, for one, will
remove my gasoline engine when I see that hydrogen fuel cells have been
perfected.

Hi,

Tomorrow night I'm up for my tech license. I'm positive I'll pass,
but am unsure about equipment. I have a Uniden HR2510 which works
fine, but I will not be licensed for it yet after this outting - next
time yes, this time no. Anyway, I have the 10M rig, but need
something for vhf/uhf. Any ideas for good first radios - ht and
mobile - would be helpful.

TIA

Steve

No, I wish it was that simple. But, I agree that is a good one to check. I have even checked the 115/230 switch for proper operation. I know that simple things like that can bite hard...

I've been all over the thing. It's not hard to work on because all transistors and ICs plug in. I've checked lots of transistors for diode status, i.e. Base to Emitter and Base to Collector, etc. So far, so good but no cookie.

I believe once I can see a schematic of the power supply, it shouldn't be too difficult to trace all of the voltages to a common source.

Thanks for the thought.

David

Yes,

But do they still require 13 and 20 WPM for advanced and extra?
Hopefully, they will do away the code requirement all together at the next ITU meeting.
Code should be an elective mode.

I'm just a newbie...wannabee actually, and I was hoping I might get a bit of guidance from some with far more experience than myself. My goal is to acquire a license which gives me full tx access to the HF amateur frequencies. In Canada, where I live, this requires demonstrating 12 wpm ability in sending and recieving morse code.

After poking about on the net for a while, I have starting to teach myself using the Koch approach and a software program called MorseCat. I've set the farnsworth speed to 20 wpm and the overall transmission speed to 15 wpm and have progressed through the first 5 characters over the first week. My intent is to progress through the remaining characters over the next month or two, then increase my copying speed to 20 wpm over the following month.

I'm then hoping to start working on the sending side, reaching 15 wpm in a month or so, and finally taking my test. My

intention is to be an active CW participant, not to simply
meet the minimum requirements for certification.

Does this plan make sense? Is 4 months (1/2 hr per day)
a reasonable time to expect 20 wpm capabiity? The Koch
approach seemed to make the most sense to me.. is there
another method which you would recomend.

It has become clear to me that achieving this goal is going
to take considerable effort and commitment. I am prepared
to do that but just want to make sure that I am going
about it in the most efficient way.

In anticipation of the most likely response:
  The local Amateur Radio Club holds a single course each year
(Oct-> March). No others are available. So, my options
are: teach myself, or wait till a year from next March
to take my exam.

They won't do anything until a 3rd offense. Had the same happen to me. E-Bay
did zip because it was his first offense.

They'll send him a warning, but I emailed the other guy that posted negative feedback, so this loser didn't pay for 2 items that he bid on in a row, then he went and bid on a 3rd item, identical to the 1st item (which he ended up paying $20 less for). He also has 2 bid cancellations. Hopefully ebay will look at all of this and kick the loser off.

>Metre

Depends on where you are from. Here in the good 'ole US of A, it's Meter. We also spell other words differently, like Color instead of Colour. You brits just love the letter "U".. :)

I was wondering if anyone could tell me what I need to look for in an attenuator. I need to bring a 2m rig from transmitting around 14 watts down to 5 watts. I have seen attenuators for sale that say they attenuate up to 30 db's, etc, but what is this in watts?

Does anyone know anywhere that I can buy an attenuator to do what I described
above? Any help would be appretiated. Thanks!

I would think that if you stick with your prescribed regimen below, you'll
be testing successfully before the 4 months is up.... sooner if you change
the 30 minutes/once a day to 30 minutes/twice a day.........Good Luck!

Rugged.... works OK... I've had one for 11 yrs, no problems, never guyed,
mounted on the roof in a windy area.... Good Value for the $ spent.

```

I have a Lunar Electronics 2m amp, model 2M10-80P and had a question that I hope someone may be able to answer - what is the minimum drive required is to get some output from this amp? I might need to lower my 2m radio output to 5 watts to drive a transverter, but I need to be able to key up the amp when I need a little extra output.

I also have another question. At my current 14 watts out from my radio, I am getting about 60 watts out of the amp even though it is supposed to do 80. Could it be putting out a lower output because I am driving it too much?

Any help is appretitated!

Yes ... maybe. Here in the states, back in 1992, we had 3 levels of code proficiency at 5, 13, and 20 wpm. I passed the five in January, and passed the 20 in June. I was extremely active on the air (CW only) in the intervening months, and was studying for the general, advanced and extra class theory.

>It has become clear to me that achieving this goal is going

It's a hobby, not a race, so don't sweat it too much. They don't give any extra points for getting it done quickly. Everyone learns the code in their own way, in their own time. Setting a goal that you find unattainable might discourage you from perservering.

I've worked Amateur Extra class hams at 7 wpm, and Technicians at 30 wpm. There's no correlation between license class and operating ability.

>In anticipation of the most likely response:
> The local Amateur Radio Club holds a single course each year
>(Oct-> March). No others are available. So, my options

Do what you can, and if you need to do more, you'll have a whole year of operating to enjoy before worrying about another deadline!

good luck and 73

Dennis KD1JT

Remind me never to deal with you. You're right, it IS a dumb question!

The same thing that's bad when somebody assures you they are going to buy something and will send you the money right away. And you then tell somebody with money in hand that you've already found a buyer and a REAL buyer goes away disappointed.

Why not use some of the cheap FRS radios? I bought a pair of $20 each (WIRED brand) 14 channel HTs that operate on 4 AAA cells apiece. Long battery life and work fine with reasonable range.

Radio Shack has some $9.99 each FRS radios on sale right now but I suspect the range is quite limited.

That way you'll be LEGAL rather than operating illegally.

Sure, they aren't "credit card sized" but a small pouch on a reasonable size dog should hold them fine. Besides it'd be a lot cheaper to lose a $20 radio if he decides to ignore you and take off for parts unknown, only to return a few hours later looking as though he spent his time running through the brush.

What is your word worth George? A bid is your word that you will purchase
something for a price YOU set. This is really sad.

What is wrong is that the guy had the winning bid on a D-104 for $45, didn't
pay the guy selling it, then bid on another D-104 and won for $25. Once you've
won an auction, you're obliged to pay for it. If the auction wasn't over yet
```

and he found it for cheaper, that is a different story, although that still is poor bidding habits. I am inclined not to accept bids from someone who cancels thier bids.

I have 2 NEW, unused Magnacraft W120X, SPDT Coaxial Relays (12VDC
operation). Photos upon request. Cost me $110 each, I don't need these 2.
Units are panel mount, RG58C/U 12" long leads with stripped wire (50 ohm). I
will sell for $70 each or both for $125 plus shipping

Nah...it's forced on us at birth like a lot of other things.

I dream of becoming a citizen of the UK rather than a subject as I am
now.

30 dBs is 1/1000th of the power input.
20 dBs is 1/100th.
10 dBs is 1/10th.

14 watts down to 5 watts is 4.5 dBs

Don't buy a very expensive variable attenuator unless you want to vary the power in small precise steps over a large number of dBs. And in any case there is no such thing as step-attenuator which will handle 14 watts input.

Get a few high wattage resistors and make a 4.5 dB fixed-value attenuator. In principle you need only three resistors but you have to get rid of 9 watts inside the attenuator and so a nunber of two watt resistors would do.

The basic 50-ohm, 4.5 dB attenuator needs two 13-ohm resistors and one 91-ohm resistor connected as a T-network.

But make one of the 13-ohm resistors by connecting four 51-ohm resistors in parallel. Make the 91-ohm resistor by connecting two 180-ohm resistors in parallel (or two 47-ohm resistors in series). The remaining 13-ohm resistor is at the output end of the attenuator.

The hardest job will be finding non-inductive resistors at 144 MHz.

For design of T and Pi attenuators and matching pads download program

MATCHPAD from website below. Not zipped up. Download in a few seconds. Run
immediately. User friendly.

The callbook shows you in Round Rock so there should be plenty of activity around you. What repeater are you trying to hit, what is the frequency, do you know the offset and is that programmed, and does it require a subaudible and if so, is that programmed? Lot's of questions, huh?

> Remind me never to deal with you. You're right, it IS a dumb question!

Sorry Guys, I didn't want to get anyone mad and I was told the only dumb question is the one you don't ask. I never went to an auction site and just thought that the guy made a bid and while the bidding was still going on he with drew his bid because he found it cheaper. If he had the high bid when it ended I agree he should stand by his bid.
Forgive me for asking a dumb question and trying to learn.
George

     4 months seems aggressive, but not overly so.  1/2 per day is
a long stretch.  I'd suggest several 10-15 minute sessions per day,
accumulating 30-45 minutes per day.  20 wpm can be a tough spot to
reach.  Expect plateaus around 10 and 15 wpm that may be tough to
break.  When you hit these plateaus, a day's break from the regimen
may be indicated.

Or if there's a drive control on the rig why not just turn it down a bit ?
Peculiar rig if it hasn't some form of output level control.

Unsoldered the original bat and replaced with a radio shack generic 3 volt
lithium bat.  Had to carefully solder to the replacement but all went OK.  Now
the left side display lamps are not working.
Oh Well!! I can live without them but I will probably have to dig in and
replace them also.  I think they are 12V grain of wheat bulbs....

In article <zIHe6.80973$8V6.10539664@typhoon.tampabay.rr.com>,

>Peculiar rig if it hasn't some form of output level control.

It does, but I was hoping to avoid that. I want to continue to use my 2m rig as normal and use the transverter at the same time... I have been told that the transverter can be made to accept up to 8 watts. I will probably lower the output to 8 watts and hope that's enough to drive the amp, which is supposed to give 80 watts with 10 in.

A friend of mine has a micro 2AT - doesn't transmit.... He had loaned it to a friend, and it came back inoperative. No manual available.

What should the settings of the DIP switch that's visible when the battery is removed be?

Thanks for info.

Subject: WTT: 6m HT for 220 mhz or 440 mhz radio
Message-ID: <20010204151533.22776.00000725@ng-cq1.aol.com>
Xref: supernews.google.com rec.radio.amateur:937

I have a Cherokee AH-50 6m HT with accessories that I would like to trade for a MOBILE 220 mhz or 440 mhz rig. The AH-50 is in excellent shape, hardly used. It is an FM only HT that covers 50 - 54 mhz at 5 watts output. Included with it is the power cord to charge the battery, Cherokee hand mike, DA-27 adapter to allow you to charge the battery and use the radio at the same time and a brand new battery, charged once and never used. This radio has all the "bells and whistles" that any 2m HT would have except the DTMF keypad. There is a programable step, PL tones, 5 memory slots and more. I can email pictures if you are interested.

I am only interested in a working 220 mhz or 440 mhz MOBILE radio. Brand new this radio plus accessories is valued at over $325! Please email direct if interested!

Why would it be illegal? I've seen remote-controlled cars operated on 6meters (I think that was the band, anyway)... There a difference between a dog and a car, or would a remote-controlled via 6meters dog be ok? ;)
As for FRS.. It doesn't have anywhere near the range of 2meters when in the woods with hills, trees, etc.. And the batteries, atleast on my radios (also radio-shack) have yet to last days (with no transmitting) like the Alinco 2meter radio does. Much less, even, when using rechargeables

(which's built into the Alinco)..
Thanks!

If you're an amateur and have to ask why it would be illegal then I guess all those crabby old men who are complaining about the appliance operator licenses being doled out are right.

You should read the regulations and KNOW what's legal and what isn't.

I just received my HAM Tecnician Licence, and looking for a Mobile Unit to
install in my car.

Other than hamradio.com...... what other websites are there??? I could only
find the one by guessing.

Other websites where I can get a mobile/handheld would be appreciated.

Thanks
Bill Muirhead

Welcome to the hobby! Try the following websites:

www.eham.net
www.qrz.com
www.qth.com

And that's just a start. You'll find many interesting links at any of the above. The first site (www.eham.net) is of particular good use to the new ham, as they have a 'product reviews' section, which consists of unbiased opinions of about every radio imaginable. I consult it every time I'm contemplating the purchase of a new (or used) rig. All of the above sites also include 'classified ad' sections, in which you can find good gear at a decent price, if ya keep yours eyes open!

Again, welcome to the wonderful world of Ham Radio, es 73 de N9LXX~~~

Also look up Ham Radio Outlet, Amateur Electronics Supply (AES) and Texas Towers. A great deal on a dual-band mobile is the Kenwood TM-G707A at $299.95. It does 50 watts on 144 and 35 on 440....Eddie

These frequencies belong to other services such as police, fire, etc. There is no authority to do this by any agency, even the FBI, DEA and similar agencies have hundreds (if not thousands) of frequencies in many bands to pick from if they wanted this type of setup. Who the broadcasts are meant for remains unknown.

Steve

Patience is the key. Learn prices, features, common problems of several older rigs. Ask around, check out prices on eBay.
OR:
Don't try to keep up with the big boys. When I got back in radio a couple of years ago, I went QRP. Rigs run from $50 up. My OHR-100 40 meter rig -- variable crystal receive filter, 5 watts out -- cost me $50 from a mail list (QRP-L). I can get a QSO just about any time of the day or night. I've even worked Spain on 40 with it.
Yup, it's CW! CW is fun if you give it a chance. There are also cheapo digital modes like PSK31. Don't limit yourself to flapping your gums at a mike! 72 & GL

>
>
>

It has to do with IF and the scanner's local oscillator. If the person wanting to detect the scanner know's the scanner's IF frequency, then it is a simple matter to add or subtract the received IF frequency to determine the actual frequency the scanner is tuned to.

Even if the scanner is very well shielded, a small amount of the IF can still leak out.

Folks,

I have a Kenwood TS-440s. I also have a YK-88CN CW filter I would like to install in it.

The instruction manual is very `terse' about the procedure for doing this on page 27.

In 6.1 (2) it says: "Remove the seven screws securing the IF unit to the chassis."

In 6.1 (3) it says: "Install the crystal in the appropriate location in the IF unit...."

However, when you remove the top, the IF unit is also a maze of harnesses and wires. The manual says nothing about them. Do they have to be removed to remove the IF unit?

In short, has anyone installed an optional CW or SSB filter in this rig, and able to recall what the procedure was in reality, and what pitfalls lurk for the uninitiated??? (Rig works fine now, I would like to keep it that way (;-)

Would appreciate any savvy advice...

You mean these bursts trigger the scanner somehow so that the number of scanners,
at
that exact second, on that frequency can be known? Sounds like a lot of expense
and
trouble in exchange for very little potentially useless information. What portion
of
the scanner circuitry could possibly be monitored miles away during reception of a
signal?

NO.

You do mysterious things then look for how much interest is generated in, for
example, r.r.scanner, a.r.scanner, a.r.amateur, r.r.amatuer. Then you say
"well for every person in these groups who is talking about our test signals,
there are probably 20 people that heard them but didn't say anything about them
in these forums. Therefore, since we counted 52 'me too' posts in these
groups, there must be 140 people listening."

It is simple people.

I paid $100.00 for my first rig (a Tempo One that was probably older than I was), but I didn't care.It worked andworked just fine. You just have to shop carefully and be patient. The deals are out there, but they don't usually volunteer to be found.

You can usually find monoband QRP rigs for HF... that might be your best bet for a cheap priced rig - just get one for one of the busier HF bands like 20 or 40 meters.

Well........ I'd bet a new car is out of the question too! But, who says you gotta' buy a NEW rig. There's TONS of good used HF rigs on the market that'll do CW/SSB/AM/digital.... even a few for under $500 that might have FM or the WARC bands. Don't be afraid of a good deal on a tube rig either... they're great for learning on, easy to fix (most), and cheap! I got great service out of an old Drake for 8 yrs before selling it (for more than I paid).

As for the Outlaw CB... be realistic when you compare prices... $250 for a SINGLE band AM/FM/SSB/CW radio (don't forget to add on the $$ for the amp to talk across town and the $$ for the 'turbo-tune') <GRIN> ...That's already half the price of a new 9 band HF rig.

I have a wav file of it. What's the best way for others to access it? post it
here or send it to those who request it?

Will do. I will post a new message to the relevant NG's with the link. I hope to
have it done today or tomorrow. Thx for the reply. If I have any problems
loading it on the web site, I'll give you a shout.

Steve

Thanks, John. I've heard great things about the 8100, and I've been considering both it and the FT90R. I know the 90R has a seven-character alpha-numeric display and not just the frequency. Do you know if the 8100 also includes alpha-numeric? I'd rather have the repeater callsign or the channel name in the display instead of the frequency if at all possible.

In my experience it's the crappy speakers.

I manage computer systems a few blocks from the Empire State Building
and line-of-sight of the antenna mast, which, for people unfamilair
with New York, is where many TV and other antennas are located. I
frequently get stray audio coming from the speakers in new computer
systems. I throw out the original speakers and replace them with a
model that I know works. These speakers cost me $15 and I buy several
pairs at a time. These arfe no-name speakers.

You might try a name-brand speaker system, call the vendor if they
pick up RF, and if all else fails send them back.

Good luck

If you just looking to get on HF, and don't need a fancy rig, either a monoband QRP rig (MFJ sells several) or maybe a 10M rig. There are several 10M mobile rigs that run abotu 25 watts out there. I use a radio shack HTX-10 and have been talking all over the world out of my car with a hamstick on the trunk. Bad part about 10M is that is usually dies shortly after sunset. But it is a blast none the less. Not much help, but some...
Good luck and hope to see ya on the bands.

Well if you are interested in getting your ham license, I sugest next time you goto radio shack, buy the Technician book,the code tapes,and the general book. Don't spend the money on a reciever if you are going to get you ticket. Instead save the $250 you have, add a few more while you study and buy you a old HF rig. Something like a TS-520. Those sell used for about $300-$400. If you are not sure about the ticket, but want a reciever, make sure it has SSB. alomost any general coverage reciever will pick up every thing between 1.8 and 30 MHZ.

```
 But they run new about $500 and up.  As for model numbers, im not farmiliar
with the older model recievers.  Sorry im not much more help, but I figured any
will help.  Have fun in the hobby.

>Cell Phones cause CANCER stupid!

So do the new Icom quad band HT's.   i carried a HTX-202 at school.  Bulky and
ugly, but i never had a problem calling home if i needed to.  Usually the front
office would let you use the phone for an emergency.  If it was raining, walk
anyways.  Its just rain.  If you don't want to ,then you should have watched
the weather instead of MTV in the morning.

Don't waste the money on the tech or general books. All the questions
and answers to the exams are on the ARRL web site. If you can't
memorize the answers,  a book isn't going to help. There is no excuse
for not only passing, but not gettting 100% when all the questions and
the answers are publically available.  Save the money for the books
for a rig.

There are a few options. Find yourself an elmer. Barring that, you can always
buy a used CB radio and convert it for 10-meter HF operation.

Memorize the question-pool just enough to pass, then gain the knowledge thru
actual experience (which you can't do till getting the upgrade).. That's
what I did, anyway... ;)

Have one up now.Worked South Korea last night on it running 100 watts, thru a
big pile up.My RST was 58.My dipole wouldn't cut it, but the vertical did.Its
up 20 feet, and the dipole is up 30.I'm sure the diploe is oreinted wrong for
Korea though.
  As for tuning it for 10 meters.I did this to two of them.Both worked out the
same.I raised the tuning rings up about 3/4 of the way, maybe a bit more.They
both cover most all of 10 , also all of 12 with a very low swr.They also worked
well on 15 meters.Odd but the first one did 15meter with a 1.3 swr, but the one
I have up now is about 2.1.In case you are wondering, the first one was broken
in a storm.I have also used both of them on 17 meters with a tuner, with good
results.Some may dissagree, but this has been my experience with this
antenna.And boy was I glad to get the HL5 last night.I have also compared it in
a recent 10 meter contest, and it made a good showing of its self.
Good Luck 73 Rob

What was I hearing? In Grapevine (mid-DFW) Texas, the signal was mostly
covered up with static (the 'meter' didn't move at all, so I assume it
wasn't nearby), but I could clearly hear contacts being made between a guy
in Germany and New York (and some other places in the US) on what I'm pretty
sure they id'd as 10meters... Sounded like a regular net, but I'm not too
sure about that.
I was sitting in the car listening during lunch-break at about noon, btw.
Thanks.
PS. I figure it was some sort of repeater.. By "what," I probably mean
"who"... But who knows.. ;)

>a family to do?Go back to being a outlaw CB'er?

Don't give up. There are lots of good used HF rigs for under $300,
and many for under $200. Yep, some are junk, so it pays to get advice
before you plunk down any $$$.

I've seen some good solid state rigs in that range ... recently
someone listed a Yaesu FT757GX for $275.

In tube rigs you'll see Kenwoods (TS120, TS130, TS520, TS530); Yaesu
FT101's of all sorts. There are many old TenTecs floating around at
reasonable prices. I've often seen Heathkit HW100, 101, 102 for under
$150.

I bought my first rig in 1992, a near mint Kenwood TS520SE, added the
external VFO, the external speaker, a 500hz CW filter, and an antenna
tuner. I built a dipole, and ran that station for a couple of years
with no problems. Entire cost was around $600. You don't need all
the accessories though when you first start.

Keep lookin' and good luck on the ticket.

73 de Dennis

Greetings...

Up for trade this time is a BEAUTIFUL, MINT Ten Tec Jupiter...Yup, the one EVERYONE is looking for! If you are not familiar, this is the same rig as the Ten Tec Pegasus, but has the front panel on the radio, for you ops that don't like computer controlled rigs. You can control this rig either by PC or the front panel. This rig was new in 11/2000.

I am looking to trade for another mid/high range HF rig. Such as a TS-940SAT or a TS-950SD. Maybe a TS-570SG???

I am really looking for a trade only. I will include the remote encoder/VFO for the right trade.

If interested, please contact me. My wife is having a baby tomorrow (02/02/01) so I might be a bit delayed in contacting you, although I have my cell phone in which I can access my AOL e-mail.

I would PREFER a 'semi-local' trade...I am within driving distance of Chicago, Madison, WI, or the Twin Cities...However, I will listen to trade offers from 'wherever...'???

73, es gud dx de N9LXX~~~

I recently got my first HF radio... an Icom IC730. I paid $250.00 for it. I saw this same radio offered on epay, I mean ebay, for only $300. I should add that it is a very fine radio. It covers 10, 12, 15,17, 20, 30, 40, and 75-80 am, usb, lsb, and cw. For the price, what more could you ask for.
The guy I bought mine from even through in a few mobile antennas, some coax (about 150') and a vibroplex bug that's about 50 years old (!!). I took this radio and coax, and strung some wires up for 10, 20, 75-80, put a tuner in and have work every area of the US on just about every band with no trouble.
The point is, if you look around, you can find a good used radio for a reasonable price... even on ebay.

And try to realize it might be awhile before most of those "bells and whistles" on the newer (more expensive) radios will make much sense to you...
Or another way of looking at it.. I'm also into astronomy and always recommend people start out with a very basic scope and then upgrade to one of those newer computer-controlled things after they learn to find their way around without it.. Besides just the good feeling of knowing you have the knowledge, you might need it some day when a kid asks you to show him something with his "non-techo" scope.. Same with radios, to an extent...

"JWheeler" <kd5bcu@yahoo.com> wrote in message news:3a79beed_1@corp.newsfeeds.com...

Sounds like remote controlled hf operation to me. K9ZK did it around here 15 years ago.

I just got my ticket (only no code for now, but hey it took 25 years of
procrastinating). I have an Alinco J 190 2mtr fm handheld that I've used for
rx only until now. I still haven't made my first contact because I get no
reply when trying a qso. I use it in the car with feed line hooked to a tram
mobile deck lid mount antenna. Trimmed it for 146.00 but dont have a uhf swr
meter. Cant make contact if using stock rubber antenna either.
It is tx'ing according to the display meter on the face and the red tx light
comes on. Have it on full pwr (5 watts) and live close to repeater.
Any suggestions? Bummer finally getting my ticket and cant use it!
Thanks,
Ken

Have you programmed the proper transmitter offset for the particular
repeater?

Did you check to find out if the local repeater has a PL tone?.....
If it requires a PL tone and you don't have it programmed in your HT, 100
watts and a good antenna won't get you into the repeater.

Do you have the 'offset' programmed properly for the repeater you're
attempting to access?
As a rule it's 600khz, + or - .... not always, but generally, any
repeaters above 147 use (+) offsets and those below (-)

If you're very close to the repeater (few miles), the rubber duck SHOULD be
enough, from inside the house.

Thanks for suggestions, I'll check with some local groups and look into this
further. Plus scour over the manual again.

Nobody has been able to identify for sure what this thing is.

The previous discussions have led me to post this weird radio
transmission on a web site so all can give a listen. It is here:

http://ocfreq.homestead.com/

There is also a discussion board.

I am putting together a webpage that will list as many 2m FM nets as I can find
information for. If you have a nightly or weekly net in your area, either on
repeaters or on simplex, please EMAIL the following information to me:

Time (and time zone!), Day of the week (or weekly), Frequency with offset and
PL (if applicable), Name of the net or club supporting the net, grid square and
town the repeater or net control is in (if known).

Check the offset (tx to rx shift) and the pl tone if used. compare it with the repeater listing
for that machine
Second choice go back to the place you took the exam for tech. and ask one of the V.E. what's wrong.
Third choice take it back to the store and see if the sales person know anything.

This guy bid on one of my auctions, won, then didn't reply to my emails. I ended up selling the item to the next highest bidder. Before I posted negative feedback, i noticed that someone else posted negative feedback about him that same day. Apparently he bid on one of their items and didn't respond. After that, he went and bid on an identical item that the other seller was selling, but for $20 less! He also has 2 bid retractions.

DO NOT ALLOW HIM TO BID ON ANY OF YOUR AUCTIONS. DO NOT SELL ANYTHING OR BUY ANYTHING FROM HIM!

I am about to test for my general ticket and get my first HF rig together.I have a old but like new heathkit 101,and would like to put up a 10- 40 band vertical.I am thinking about getting the hustler 4-btv,it fits into my very limited budget and will get me on the air.Please let me know what you think about this antenna and setup.All help and advice most welcome.
Thanks,
Soon to be general (James)

Well guys i am the very proud owner of a old but like new mint condition
Heathkit 101.I called my uncle who lives many states from me who has been a ham
since the early 50's.He gave the the the rig free,is so happy about me getting
my Genearl ticket he is even paying for the shipping.I got a Heathkit 101,power
supply,antenna tuner,key mike,the works.My uncle built the rig himself.It's
great to have family and hams helping other hams.
Thanks,
James

Wont Ebay "go after" people like that for you?

Maybe I'm thinking of another site, but I sure seem to remember some "pretty
strong language" against such practices there.

I located the memory battery which is in the control head. The battery has a
tab which is soldered to the board and the tab on the battery appears to be
tack welded. If someone has replaced one of these batteries I would appreciate
some info., ie. is the battery available at Rat Shack or should I ordr from

Alinco and is the solder tab all that is required to remove the bat.

THX

Check out this 'fire waiting to happen'.......
 http://page.auctions.yahoo.com/auction/48826912

Notice the SO Cord for power... looks like #12/3 conductor...doubt it's #10.... and through that's gotta come at LEAST 40 Amps (assuming 100% efficiency), probably more like 55 or so. (assuming the 'Bird-Watts' is right!)

I'll bet that guys neighbors for about a mile around will be happy to see it go!

I have a "Semi-Home Brewed" 2m 5 ele yagi that I will give away to anyone who
can pick it up in Newport, RI. It really doesn't come apart easily and I will
be moving soon, so I have decided not to take it with me. It works fine,
although it could probably use a little firming up. I converted a Radio Shack 6
ele FM receiving antenna to make this. If you go to my web page at
http://www.riradiobuff.com, you can see the antenna. Any questions, please

Subject: Sale! 100Watt to 1400watt HF80-15M Amplifiers
Message-ID: <20010128084251.00554.00001781@ng-fq1.aol.com>
Xref: supernews.google.com rec.radio.amateur:813

Hello, I have alot of 80-15 meter amplifiers for sale, after the closing of a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable power output, and have a 25DB receive pre-amplifier)

KLV 100 watt unit: $89.99
KLV 300 watt unit: $175.00
KLV 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

KLV 600 watt: $399.99
KLV 800 watt: $435.99
KLV 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

KLV 300 watt: $599.99
KLV 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justindepolis1@aol.com
Quantity pricing available, and prices can be negotiable, thanks, and 73's.

I need your advice on what type of radio to buy.I would like to buy a receiver that I can listen to Hams talk,SSB and CW and also i love to listen to shortwave.At the present i have a cheap radio shack shrotwave radio that i can only pickup the big stations with.I would like to get my General Ham ticket sometime in the futrue.What type of radio should i look for? a general coverage ham receiver or a DX 398 type shortwave radio?Will the DX 398 receive all the HF ham bands?I only have about $250 to spend,what advice do you have?
Thanks for your help,
James

```

I'm a 46 year old extra class ham (since 1992) looking for an elmer to help get me started in building. I'm located about 5 miles from ARRL HQ.

My interest (today) lies mainly in building QRP CW tranciever kits. I realize that today's kits have excellent instructions, detailed PC boards, and are easily assembled by anyone who knows which end of the iron is hot ... but I don't ... grin!

I'd like to build a Oak Hills Research Norcal 40A for 30 meters, as well as their watt meter and digital freq display. Pretty ambitious for a guy with NO building experience (outside of dipole antennas, and connectors ... g!).

I could use a lesson or two in soldering techiniques (no surface mount stuff, yet), desoldering (now THAT might come in handy ... grin!), winding toroids, equipping a workbench (tools and instruments), and the like. Just enough to get me going, I'll take it from there. If I pick up some theory along the way, all the better, but building a kit doesn't require you know how it works (!).

I'd be more than happy to travel to your QTH if getting around is a problem. I'd pay for any phone calls. Hell, I'd even buy ya lunch! Anyone got a Saturday or Sunday (or two) free?

Thanks,

Dennis KD1JT

Wouldn't one post with "I got some crap on Ebay" be much more appropriate
than the numerous FA ads you're posting to a group that's not even for
trade/sale items?...

... "FA:" is a "standard way" to post auction items, so that one can set their
spam/junk filters to "reject" & not display any posts starting with FA:, if one
desires & doesn't want to ever see auction posts on a newsgroup. Auction
posts starting other ways, like "I got some stuff on ebay" is not a good idea
as it would "get around" the filters.....

Why is it that OR "FA"?
Why not combine both with single "FA: got some crap on Ebay" in an
appropriate ng work, as I suggested?...

Thank you for pointing this out. ALWAYS put "FA" at the beginning of
the subject line. For the exact reason that was mentioned. It helps
those of us that are not interested to filter it out.. People that
put something else other than "FA" will probably get dumped on
for posting misleading advertisements..

Just my Opinion

Bob

Gentlemen,(Ladies),
I am looking for a wire to work 10-80M. I can easily install the DX-CC as Inverted Vee with the center at 30' & the ends at 8' . The G5RV will not be so easy. Is the DX-CC an acceptable alternative to the G5RV?

Any input would be great

73

Better Yet, do not post it.. It's not like everybody does not know how
to access ebay. and it is much easier to use their Search engin than
to read a bunch of auction drivel in an inappropriate News Group..

Just My Opinion..

Bob

Time to get rid of this rig to make room and $ for new equiptment. The
chipswitch was installed by a local shop, (www.chipswitch.com) The radio
works perfectly, and is a 9.5/10 for cosmetic appearance. There is a
small chip out of the upper right hand corner, and light marks where the
bracket goes, it's perfect other than that.

Comes in the box with mic, mounting bracket, power cord, mic clip,
manual, and the programmng manual for the chipswitch.

Asking $180 plus $12 shipping.

Remove the coax from the near end of the feedline and the G5RV is no better and no worse than any other random length dipole with twin feedline of random length all the way back to the shack.

To help make your choice download in a few seconds program VARNEY from website below. Not zipped up. Run immediately.

It will be found that the most efficient all-band HF antenna for 80m etc is a high dipole, resonant somewhere in the vicinity of 80m, in or out of the band doesn't matter, fed with 600-ohm openwire line all the way. Then choke balun plus simple tuner.

Howdy from Texas,
I have just finished cataloging the tubes from the estate of a local ham, now SK. There are more than 300 types and more than 1500 tubes total. You can view the list here, www.ditdit.com .

Anyone with suggestions on the best source of technical information for the
extra theory? Ideally, something online but if I have to spend the money,
what books are the best? I have some basic electronic understanding. Just
need to bone up on the formulae and some of the more esoteric aspects of
amateur radio.

Thanks,

I have a question I'm hoping this group can help me out with. First, I'll
apologize in advance. I don't frequent this newsgroup, and I wouldn't
normally just join and throw a question out to the collective, but I've
scoured deja.com and any FAQ on the subject, and I think I've exhausted my

internet resources without an answer to this problem.

I have a strong background in computers and electronics, and have a computer & networking business on the side of my regular employment. A year or so ago I built a computer for my Sister, who lives in Orlando, Florida, very close to the two big airports there. Shortly after she set this machine up, she started hearing "voices" coming from the speakers. Well to make a long story short, it appears the computer (I'm guessing the sound card) is receiving radio broadcasts from the nearby airports, circling aircraft, and possibly also CB radio. I think I understand how this can happen, especially since most sound cards have crystals on them, but I've never heard of this happening before, and I would think there would be something in place to prevent it.

Has anyone ever encountered this before, and is there any way to prevent or block it from happening? If I change the sound card to another brand or model, could that help, or most likely make no difference?

If it matters, the sound card is a Creative Labs Soundblaster AWE64 (Model CT4520), and the computer is an AMD K6-II 350mhz system, based on a SOYO motherboard.

I look forward to your suggestions,
thanks in advance,

Scott

If the speakers are amplified, its possibly getting into them
directly. Shielded speaker wire, RF chokes, etc could possibly
cure it.

I am giving away my 2m 5 ele yagi to anyone who can pick it up in Newport, RI.
I made this antenna from a 6 ele FM receving antenna. It works great, but I
will be moving soon and it would not be practical to take the antenna with me.
It does not disassemble easily and although it is not real big, it would take
up too much room and probably would be bent up in the moving truck. There's a
picture of it on my webpage. If you're interested, email me!

Two excellent souces are the ARRL Extra Class LIcense Manual ($12.00 order from http://www.arrl.org) and the Gordon West Extra Class study guide (I think about $12.00 but I was about get one for $.07 - and it was the CURRENT revision!), available at Radio Shack. As noted above, check around various 'Shack stores, sometimes they'll put it in the clearance table and you can get a steal on them.

Online - very many test generating sites, which gives you the opportunity to practice the test, but the two books above not only give you the information you should KNOW, they also give you the ENTIRE question pool AND answers...

Best of luck!

The standard AWE64 cannot drive speakers directly so needs external
powered speakers. I agree that ferrite rings should be knotted onto
all leads entering the speakersas close to the speaker as possible. I
doubt very much that the soundcard is picking up the RF.

Here is a link to the Sunnyvale VEC ARC website which has links to
many/all of the testing sites on the web.

http://www.amateur-radio.org/exams.htm

The West Valley site randomizes the answers so you aren't caught in a
trap of memorizing the answer without understanding the question.

Hi folks,

Well, after about 6 years and now with a brand new Saturn. I've finally decided it's time to replace my old Kenwood TM-732A with a new dual-band mobile radio, and I'm turning to this august forum for suggestions.

I liked the 732's features, but its reliability was pretty horrendous for me (2 VHF PAs, a blown VHF and UHF front-end, bown AM AGC to name but a few problems). I'd like a radio with dual VFOs and simultaneous receive, CTCSS and good RX frequency coverage and one that is remotely mountable. I don't really need much more in terms of features, but reliability and wide frequency coverage are pretty well must-haves, since I also like to monitor aircraft frequencies and the local PD in the 476MHz band as well as the usual ham bands.

If anyone can give me a suggestion or two of either something to look into or stay away from, I'd be most grateful. Also, are there any good amateur radio retailers in the 5 boroughs of NYC? I just moved down here from Toronto last fall, and I've yet to locate a good retail shop where I can get some good advice and twiddle the knobs before buying.

Thanks to any and all. If replying by e-mail, please reply to pjd at panix dot com and not the address in the reply-to. I'll check back here as often as time allows as well.

Cheers and 73 de
Peter Dougherty

The ARRL site has the entire question pool for all classes including
Extra.  Click on Licensing, the Exams, then Exam Question Pools.
Although the old days of actually knowing theory are over, I know some
people still want to learn but if his only goal is to upgrade, he may
as well just memorize the questions and answers.  No way anyone should
fail an Amateur exam when the questions and answers are posted
publicly.  No need to buy an books.

Dual Band of 2 m and 70 cm? Look at the Yaesu 8100R. Add the dual-receiver CTCSS decoder.

Neat rig. Got two. Work great! They can cross-band repeat for use in emergency situations, too.

Well, as of today, I am a new ham. passed the Tech, then the general. I
damn near choked on the 5 wpm code 'cuz it gave me time fer my mind to
wander between letters. Guess that's what I get for learning to copy at 13
wpm. BTW, I failed the Extra by one point. All in all it was a good day....

Good idea..... used to do that with every sign I'd see, license plates, and even sometimes with the newspaper... any practice is good practice.

This web page with the same applet works better on my machine.

http://homepage.mac.com/k6mam/MorsePractice/MorsePractice.html

Better yet follow the directions and download the .jar file to your machine and pick up a copy of the SUN java runtime environment and use it locally. It allows you to save your place and not have to highlight all the characters every time you start. Using this applet I was able to pass my element 1 after two weeks. This is a very fine tool and has everything you need including instructions on the Koch method. The price is right as well! Thanks to Martin Minow for the development.

Not as boring and you find you are spending a whole lot of time practicing
without really trying.

Just don't pay attention to that dit dah crap if its still around. Such
nonsense. They sound the same ones just longer than the other.

Why'd you wait till you could pass it at 13wpm to take it at 5wpm?...
AND.. Why did you not try the written-test again if you missed by only 1?...
That's how I passed the "pre-welfare" general, btw.. I failed on the first
try by 1 or 2 questions and then passed on the 2nd attempt...

Another is short-hand.. ;)
I learned "note-hand" (an abbreviated version taught for easier note-taking in class) which makes it much easier to keep up. I admit I still have a hard time deciphering what it was that I wrote down, but.. getting it wrote down's easier.. ;)

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206594067

As of this message, the price is only $61! Get it while it's hot!

This auction is for a Yaesu FT-415 2 meter HT. The HT has all the "usual bells and whistles" that any other HT has, PLUS PL decode (an optional board for this radio) - great for finding the PL tone of a repeater. There's a total of 38 memory channels, a call channel and dual VFO's. The tx/rx range has been increased to approximately 136 - 172 mhz +/- a few mhz, which will allow you to monitor your local public safety frequencies. There is a fairly new battery, bought in August. It is a 1800 mAh battery, giving superior operating time. The condition of the radio is about a 7.5 out of a 10 with various scratches a little bit of fading on the markings, but not much. The only known problem is that the mike jack doesn't work. You can still hook up an external speaker and from what I understand, the mike jack can be fixed. Includes a wall charge and car charger!

RADIO FLEA MARKET in BEETSTERZWAAG.

The flea market takes place to - 26 May 2001. Do you look for an exotic transistor kit or a super recipient, fixed and do manufacture kit... or do meet of radio friends? Dan comes Saturday 26 May to the Friese radio market into Beetsterzwaag!

Many thousand visitors come each year from the entire Netherlands and Europe to this radio flea market spectacle, approx. 100 dealers, with most diverse articles, like senders - recevers - power supplies - antennas - software - hardware and literature.

Additionally of businessmen in the place also a flea market with many attraction organized for large and small. There is unfortunately no sales desks free on the radio flea market more, but you can reserve suburb, announce, for the year 2002. Is possible also by telephone & email, contact on to take with the executive committee. Down are these addresses.

How does one find Beetsterzwaag? From direction Apeldoorn = > Zwolle = > Meppel = >
Heerenveen = > Drachten, departure after Gorredijk Tijnje comes departure (28) Beetsterzwaag.

From direction Bremen = > Groningen = > Drachten = > Heerenveen, departure after Drachten Haven comes departure (28) Beetsterzwaag.

On 2mtr, 145,650 Digi Meppel and 145,700 Digi Joure can one to instruct leave themselves. Inlet is from 09:00 to 16:00 MESZ, into which Cafeteria one also boarded into this time.

This whole is organized of VERON FRIESE WOUDEN. Cordially Welcome in
Friesland on the FRM!

Contact people, are:

Actually I learned code back in the early 70's. Used to monitor marine cw
as well as ham cw on my old SX-28 boat anchor. I had no ambitions to be a
ham, however, since my main interest was SWL'ing, chasing Radio Uganda and
such. I used to be able to read some good fists at 20+ wpm, and I have
degraded somewhat. Anyway, recent events (kids outta the house) and
advancing age have brought me here...

>AND.. Why did you not try the written-test again if you missed by only 1?...

The VE's offered me a re-test, but I could see that some of them were
squirming sorta like little kids when they gotta go potty. I could tell
that they had been there for a long time and were hungry/tired/hadda go
potty. I'll go back next month, after I actually study the extra questions ;^)

Q.

You might try making yourself some letterhead, and requesting engineering
samples for evaluation for your new product. If the chip seems meets your
needs, you _might_ need 20,000 or so for the production run.

Do you need a divide by 64/256 switchable or would one or the other do?
Also, are these for home projects? Novatech has a pile of old (now obsolete) equivalent to the SAB1165. The actual part is the U264B from Telefunken and is /64.

These are spec'd only to 1GHz, but they can be pushed. I am sure I have a few-- maybe ten or so of faster /64.

Subject: FA: ONLY 8 HRS LEFT! Yaesu FT-415 2 meter HT w/"PL" DECODE!
Message-ID: <20010114145643.25851.00001352@ng-mk1.aol.com>
Xref: supernews.google.com rec.radio.amateur:666

The price as of this message is only $78! It's gonna be a steal!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206594067

This auction is for a Yaesu FT-415 2 meter HT. The HT has all the "usual bells and whistles" that any other HT has, PLUS PL decode (an optional board for this radio) - great for finding the PL tone of a repeater. There's a total of 38 memory channels, a call channel and dual VFO's. The tx/rx range has been increased to approximately 136 - 172 mhz +/- a few mhz, which will allow you to monitor your local public safety frequencies. There is a fairly new battery, bought in August. It is a 1800 mAh battery, giving superior operating time. The condition of the radio is about a 7.5 out of a 10 with various scratches a little bit of fading on the markings, but not much. The only known problem is that the mike jack doesn't work. You can still hook up an external speaker and from what I understand, the mike jack can be fixed. Includes a wall charge and car charger!

I would appreciate any comments about the two manufacturers in regards to
the quality, durability etc of their products.  I'm looking for a dual band
radio and wondering which way to go.
Thanks,

Stumbled over a new website that looks pretty good. Has stuff on ham radio,
antique radio, broadcasting, frequencies, utility monitoring and other
shortwave monitoring. Hope this info helps if you like to read about radio.

The only choice you offer is between Yaesu and Icom... I prefer Yaesu. I've never really needed service on any of their equipment I own, but on an HT I still have, I broke a small part that holds the battery on...... After a mailed request, in which I included a check and a short letter, they sent back four replacement parts AND my check, thanking me for my confidence in their product. They sure got my vote!

I was wondering if anyone know of someplace on the net where I could get a copy of the manual for the Standard Horzion Eclipse+ marine radio, or if someone had one that they could copy for me. I know it's not an amateur radio, but I can't seem to find any newsgroups for marine radios...

Unit is in very good condition.
Works well, no blemishes or scratches.

It does not contain the BS-8 Pan-display adapter.
There is no manual, but the moniter is very intuitive to operate and manuals are readily available.

$195.00 plus shipping from 97006

Or I would consider a trade for an older HF rig or a newer 2 Meter mobile or 440 MHz mobile. Perhaps an ADI-600 HT?

Thanks,
Rick

My best advice is to not restrict your search to one manufacturer or another
but rather to compare specific models.  You'll find that all the major
manufacturers have some very good models (Icom's 746, Yaesu's VX5) and some
not-so-good models (Icom's Z1A, Yaesu's 757).  I think you'll also find that
the service is comparable between manufacturers as well.  If you know
roughly what features and performance you need in a dual-band radio then it
might be best to pick the models from various manufacturers that closely
meet those needs and then solicit opinions about those rigs.

Hi! I'm a newbie to packet, and I'm working on a project. I'm trying to get my HP48 calculator to remotely log onto my Linux computer to check my e-mail from anywhere within a 2 or 3 mile radius. I have everything set up except for the TNCs. Here's my problem. I need to set up both TNC's so that whatever I type gets sent to the serial port (ONLY what I type, nothing else), and ONLY what is received is printed on the screen. I'm using a KPC-3 and a KAM. I've turned Monitor mode On, and I typed in K to put it in CQ mode. Here's what I get:

```
#I want to send "123abc"

KI0PX>CQ: <UI>
123abc
```

The first line is what I want to get rid of. It's causing all sorts of problems, because the computer interprets everything literally. How could I set up the TNCs to do this? Anybody out there a Kantronics guru?

I hope my question makes sense. I basically want to use the TNC in its most basic form, but I don't know how to do that.
Thanks for the help and 73!
-Ben Moss, KI0PX
I hate to ask this, but it would be nice if you could reply to benm@cyberspace.org (I'm cross-posting, so I want to make sure I see all replies). Thanks!

THen you need to turn monitor mode off. That is what is printing the traced packets.

Yes, but if I do that, then I won't be able to hear the other station
that is transmitting! I need two computers to communicate to each
other *directly*, with nothing else. What the KAM gets from the
computer, it transmits on the air. What the KAM hears on the air, it
sends to the computer... nothing else.
Thanks anyway!

Then you must first use the CONNECT command from one of the ends.

Rob

Any friends of G6CQF who might not yet know, please be advised that he sadly died, unexpectedly, yesterday (15/01/01).

"G6" was well known within the radio and TV broadcast industry, as well as the hi-fi, video, and consumer electronics industry and will be sadly missed for his professional attitude and general in-depth knowledge on all things electronic.

For more info, please email timom@breathemail.net

Please forgive the posting of this to various forums - G6CQF had a widespread circle of friends in the UK and abroad - some of whom would not yet be aware of his passing.

T..

If you want to get a subscription to QST, you have to join the ARRL.
Only product reviews are available online, and to access that part of
the website you still have to be a member. You can buy QST on CD-ROM
going all the way back to the beginning from the ARRL. Otherwise you
have to buy the magazine at a news stand (not all of them carry it) or
Ham radio shop.

G6CQF is a radio call sign, how can a call sign pass away?

I suppose it's a small consolation that there is no mention of "silent key",
a small step for man, a giant leap for amateur radio...................

How about MR R TOMALSKI 18 FITCH COURT LABURNUM ROAD N MITCHAM
SURREY, CR4 2ND is he still about now his radio station is dead?

G8ASO

Hi,

If you would like to connect to the UK (and world) packet cluster network
you can telnet to:-

gb7ujs.shacknet.nu 7373 (for port 7373)

or if you prefer the IP numbers

212.56.64.198:7373

There si also a neat java telnet application on my website that will allow
you to connect directly within MicroSoft Internet Explorer.

Check out my website for some stuff for sale also.

73 and enjoy de Bob G4UJS

I�m looking for "Code3 Gold Plus" interface schematic, or for some
internet site where I can find it.
I think its name is "Hoka IF5 interface".

Thanx from sunny Spain.

Once you connect to the Linux Station, it will see
*** CONNECTED to <callsign here>

Then you can type whatever you want and it will see it as you type it line by line.

I'm was working on software that will interface with my home TNC via HF and download my email to me while I'm on the road, but since I got the Nokia Data Suite and PCS Dataconnect, I just connect using my laptop. Plus I can surf the net from my vehicle on long trips (when my wife drives, of course)

Now I just write packet terminal software. Small hobby.

In the modulator circuit, the input capacitor blocks dc from the stage that is the source of rf. The resistor and the input waveform establish the bias on the base of the transistor. The capacitor across the primary of the transformer tunes it: it makes the statement 'rf transformer primary tuned to fc' true.

In the demodulator, the diode doesn't remove the dc component; to the extent there is one, it creates it by rectifying the rf input. There are two ways of looking at what the diode does: you can say that it rectifies the rf waveform, and produces a slower changing voltage across the capacitor that corresponds to the modulation or strength of the rf input; or you could say that its non-linearity causes the rf wave to intermodulate with its sidebands, and the result is the original modulating signal.

Hi!
I have FT530 B4 version
I cant modify it..I need to receive above 440.000 MHz but this radio work
only between 130 - 174MHz and 430-440 MHz
I allready desoldered jumper 13, radio DOES reset (erase all memories) but
up/down arrows reset doesnt work!
Radio model is 3C102424
One my friend have B4 version HACKED, but i (he also) dont know HOW!!!
please help me....looking for this stuff allmost 2 year...i like this
radio...please help me!
Thanks!

Hello!

Anybody have any information on where to get a VFO signal to drive a Tempo One digital display? Is there a usable signal available at the external VFO jack?

If you have instructions for this unit or else have this unit in use, please let me know privately.

73,
Paul

Another solution's to look for ham-radio clubs in your area and buy everything used (they're usually not advertised anywhere, so you have to look).. Some individual will often have what you're wanting.. And much cheaper than new..

Jerry,

Congrats and welcome! As for "local," okay, regional dealers, there's also Associated Radio in the Kansas City area.
That being said, I usually buy from either Radio City or AES. The various hamfests around here (the Des Moines club's meet is usually in the spring, Hamfest Iowa in October and Cedar Valley (CR club) in August) are also good sources of gear.

Paul

For Sale Just a few left.
Several Kenwood TK860K and Gs
These were just removed from a police dept. and replaced with all TK880s.
Some are less than 5 months old and all are less than 2 years. old.
All come complete with mic, power cord and new mounting bracket and hardware.
All in good condition and working fine.

TK860 K go for $200 each
TK860 G go for $250 each

Several available, inquire for quanitity pricing,

Email Steve at srich@home.com
or call weekdays at 800-431-2929

John & Norma Adamson <josttech@mediaone.net>

Hello,

Thank you for writing in to day with your input on our categories.

Please understand that we hear from our members on a daily basis on how they feel our categories should be set up as we all any new features they feel would be an asset to the eBay site. We appreciate your willingness to share your thoughts and ideas with us.

We have noted your Consumer Electronics Category Suggestion and will look into the possibility of including it in future category implementations.

Again, thank you for your suggestion and we hope to hear from you again in the future. Have a great day! :)

Regards,

Sheena
eBay Customer Support

Subject: Other find item questions
Item:
Message: Who put Commercial Radios under: "Everything Else:Office Equipment:Commercial Radios"?????

Why was it moved some place else at all?????

Does someone at Ebay think this is cute or what?

Commercial Radio belongs back where it was under Consumer Electronics.

Please put it back as it is just wrong!

Thanks and I hope someone really reads this.

Have a great day.

I was reading this in another news group and hear the signal described -

Some very mysterious transmissions seem to have started about 2 weeks ago. This mysterious interference consists of short, 1 second bursts of data packets described as "vibrating noise". While there are no reports yet from other areas of the country, it is very possible that it can turn up anywhere at any time. It is most prominent in the North Eastern area of the country, particularly around the NY, NJ, CT (Hudson Valley) region, and has been noticed by many radio enthusiasts residing in Orange County NY. The most notable frequencies are 40.55 and 169.765 during the day (10 am - 3 pm is prime time), but occur everywhere and anywhere between 30 and 400 MHz - 24 hours a day, seven days a week. The data burst noise appears to change frequency for no reason, landing on frequencies allocated to specific police, fire, and ambulance services for a few seconds, then continue on to other frequencies only to return again a little while later. It always sounds exactly the same every time. These mystery signals also seem to transcend through the AM, FM, and WFM modes. All the usual suspects such as paging, radio stations, cable TV and satellite, links, telephone and utility lines have been eliminated as the source. The interference is equally present in urban and rural areas alike. Nobody can peg the origin - the signal is everywhere... but nowhere.

Anybody know what it is?

Go ahead and give a listen to the frequencies listed above, you will definitely hear it within a few minutes of plugging in those two frequencies. I receive it loud and clear on my base scanner and it only has the little stock antenna attached!

It's definitely there. Sharp signal, data transmission, and then it drops.
33.480 is another good freq. I wonder how far away it can be heard. Post
your town and county if you hear it and lets see just how big an area this
covers, anyone up for the challenge?

Does anyone have any experience with using an Imax 2000 on 10 meters? It seems
designed for CB, but there are tuning rings, so I assume it can be tuned for
10m...

In good condition, some wear on 'Yaesu lettering' on base of microphone. First
$125.00 via PayPal gets it. Works perfect. I just got it in the mail today,
but am trading my FT-767GX/CAT so have no need for it now.

Also for sale a set of 'hamstick' antennas made by Valor. I have the 15, 20,
40, and 80 meter sticks, complete with whip and Heavy Duty spring. First
$90.00 via PayPal gets 'em.

73, as always~~~

Good condition with some minor scuffs from normal usage. All keypad #'s still fully readable. 41 memories. Includes Hi-Capacity battery pack, drop-in charger, and manual (I know it's around here somewhere...perhaps even the box!) Works perfectly and priced right. First $135 via PayPal gets it.

73, es gud dx de N9LXX~~~

Isn't there some kind of "hush-hush" government radio and/or radar operation going on on eastern Long Island? I think someone once told me it was near Montauk Point, after we had been experiencing some anomalies coming from that direction at Camp Edwards/Otis AFB here in Massachusetts.

Sounds like spread spectrum data transmission to me.  It randomly
selects 'open' frequencies in a pre-programed format.  Probably some
Government BS again.

At 12 volts DC, the radio WILL put out 5 watts of transmit power. But the only way to get that is to have either a 12V battery pack, or purchase the adapter from Cherokee to run off of the car battery.

Incidentally, 13.8VDC is really 12VDC. The 13.8V is merely the charging voltage for the battery.

Does anyone know where I might find an inexpensive 6-meter SSB radio? I really want to get on 6 meters, but I don't have a lot of money to spend on a radio. I would consider a kit that has to be put together, or even a radio that needs a little work. I don't need bells and whistles. Maybe even one of those old crystal-controlled Heathkit radios would work.

I'll agree with that! I had a Drake TR-3 that performed very well with minimal maintenance. Most significant thing I had to do to it was install new tubes in the final and realign it. The older Drakes can take a lot of abuse, which makes them a good choice for a beginner.

You need to wrap aluminum foil around your head to hear it.

Sheesh, a data signal, vibrating, everywhere but nowhere.

I have a bridge for sale and am open to all offers of cash. It has a data
signal on it too.

ROFLMAO

Glenn

There are many illegal keyclowns from rec.radio.cb tying to discredit N8WWM because I point out the law and report illegal operators. I invite you all to do a search on deja.com of N8WWM and see the past postings going back before Christmas to see what kind of person N8WWM really is. Thank You.

Can't hear it in San Jose California.

My 1st wild ass guess: A foreign military satellite drifts out of position to a spot over the US East Coast.... Satellite thinks it is at home and tries to communicate with ground stations....

I don't believe even the black parts of the US government would use frequencies allocated to local police & fire services. That makes the transmission foreign. Spies want their burst transmissions hidden. So, I figure it is not spies, because of the obvious patterns and heavy use that you are monitoring. The only other thing I can think of is Foreign Naval Vessels in the Atlantic. However, I would not expect the highband or UHF transmissions to go very far inland, and direction finders or beam antennas would have localized it to the East by now. So, I exclude Foreign Navies. All that leaves is satellites.

Idea 2: Actual transmission is on legitimate government or military frequencies, but your radio seems to pick it up on public service frequencies due to receiver flaws.

Yes, we have been hearing strange signals here in southeastern Massachussetts. We have had our scanner set to the same local area police channels for about 10 years and have never heard this mysterious noise. The weird signals started in early December 2000 and sound a lot like morse code only much faster. The signal lasts only about 3 seconds at a time.

Maybe I haven't done enough DXing but the data traffic I hear when

I am scanning the shortwave frequencies is more of a screaching or chirping sound. This new and mysterious sound on the VHF scanner is much different

JOHN in Massachussetts

I've got a very wild idea if all the guys hearing it are in the same general area. Cable TV systems use sweeping equipment that cover this entire spectrum. Normally its a rapidly triggered sweep, rapid enough to not interfere with the video being delivered.

My understanding of some of the modern equipment, is that the tech in the field can zoom in on certain frequencies by remote-controlling the sweep transmitter for different rates, etc.

This could explain increased activity at certain frequencies if they are trying to troubleshoot something at that particular point in the passband.

But, on the logical side, if you don't have any other evidence of cable leakage at the normal cable TV carrier frequencies, there's no reason why the sweep should be leaking out of the system.

With the use of fiber optic linking, some cable companies are covering upwards of 100 miles radius from a single headend.

Check to see if you hear any of the video carriers, and if so, that might be the answer.

>I don't believe even the black parts of the US government would use
>frequencies allocated to local police & fire services.

mostly not. but when I was in the ASA we used the 6m ham band quite often, a
shred allocation of course so we were perfectly within our rights as per the
NTIA

I bought that accessory. It also supposedly allows you to plug the charger into
the accessory and run it plugged into a regular outlet. I've also purchased a
new battery. After talking to Cherokee, it sounded like I had a bad battery...

Can anyone assist with the VHF and UHF mods for the FT736.
I have followed the procedure by G0HEG, but cannot complete sucessfully.
Can these mods been done via a CAT interface?

Any advice and assistance greatly appreciated.

Thnks
Maz

rec.radio.amateur:803

Well, if thesignals are so clear and easy to predict and receive, why
don't you guys with really good rigs and directional/adjustable
antennas triangulate on the signal and pinpoint a transmitter
location? That way someone can physically go out and check the
location. That would surely answer the questions with regards to "who"
is transmitting.

BEGINNING IN FEBRUARY, I AM GOING TO BEGIN ATTENDING CLASSES IN AN EFFORT TO OBTAIN A TECHNICIAN CLASS HAM LICENSE. I DONT KNOW A LOT OF TECNICAL TYPE THINGS SUCH AS RADIO WAVE PROPAGATION ANDELECTRICAL PRINCIPLES, ETC. BUT I DO LOVE THE RADIO COMMUNICATIONS HOBBY VERY MUCH. COULD ANY ONE GIVE ME ANY POINTERS AS TO WHAT TO CONCENTRATE ON IN REGARDS TO ATTENDING THESE CLASSES AND HOPEFULLY GETTING MY TECHNICIAN HAM LICENSE?
THANK YOU !

To start with, as a friendly pointer, please don't type in caps as that is
considered rude (it is the typed equivalent of shouting) but perhaps more
importantly is more difficult to read than normally capitalized text.

Work on understanding the sample questions...not just memorizing the answers. All those questions are directly from the same pool that the actual test questions will come from. Make sure that you not only memorize the appropriate formulas, but understand how and why they work The only real memorization part that might stick you is the section on band limits, because they may seem arbitrary and follow no easy rules of logic as to who is allowed to transmit on what mode and where.

Good luck and 73 :)

Simply memorize the answers with Ham-University or some-such similar prog, pass the test, and THEN take those classes a few times... (Junior-colleges also sometimes offer classses somewhat related to this..)
That is if you're like me... I learn by doing, and had no chance at all of learning that stuff from books only. Just don't become a typical Technician.. Most of 'em went from CB's simply for the extended range and do nothing for what's supposed to be a technical/public-service hobby...
BTW, After a few yrs of being a ham, I've forgotten all the memorized answers, but can usually pass all the tests with actual knowledge... from experience...

Dear all,

This might be slightly off topic, although this was the closest newsgroup I could find so I hope you guys don't mind this. I'm trying to find out about legality of institutional use of cell phone jammer. I have been told FCC bans any device that is meant for malicious intereference with authorized communication device. I am almost certain that individuals are not allowed to operate them and I'm pretty sure

schools aren't allowed either. For somereason our school have them and
we can't use cellphones. If it isn't legal can someone provide me with
the FCC statue regarding this?   The FCC statue would be a great help
in fighting against schools as if they are in violation of FCC law
they'd have to stop using it, which means we can use cellphones.

JC

>
> Yes, it is your right and you should fight to keep it!
>

    I believe so. I should fight for it. School might have the right to write out
all
this crap in their policy book, but they have no right to violate FCC rule in
order to
enforce it.

>
>
>
> Deliberate interference should not be tolerated in any form, I am agreeing with
you.

    If they are allowed to do this, we students should be allowed to eat whatever
we are
pleased to in the classroom and interrupt the class as how we plese.

>
>

The blocker means that student that walks to school can't call home without waiting
in looong line at pay phone to arrange a pickup when you discover its raining outside
really hard.

You may want to check and make sure they are using a jammer before taking any action.

I've been in buildings where mine wouldn't work, but never considered there
possibly being a jammer there.. ;)
Cell-phones should automatically refuse to function once instead a school,
tho...
Same with pagers, walkmans, etc..

The key word here is HOBBY. Are these folks breaking any rules and regs? no.
Do you actually have any proof to back that hams that once were CBers do
nothing compared to others? I didn't think so. It is nice to hear that same
old bigotted lie is alive an well in ham radio. Sounds the same now as it
did 3o years ago.

> BTW, After a few yrs of being a ham, I've forgotten all the memorized
> answers, but can usually pass all the tests with actual knowledge... from
> experience...

That is certainly what hands on experience does for you. Aren't you
concerned that you only usually can rather than always can pass the test?
Most Doctors, Lawyers and auto drivers would fail their licensing tests if
they had to taken them over again years later.

Again. it's a hobby. Pull that giant stick out. It has made you grumpy!

Glenn

That goes without saying, and unfortunately phones have little to do with it.

Additionally, I suspect he has one of the 1+ GHz phones and is running into either too much rebar in the walls or just plain poor coverage. The grand digital systems leave much to be desired. A lot of blank areas, poor reception inside buildings, and other such. Maybe we can get him to study a bit of radio fundamentals? At least his reading might improve....

You would think that a kid who walked to school would be prepared enough to keep
rain gear
in their locker.

Greetings!

     Up for trade this time is a BEAUTIFUL Yaesu FT-767GX! This is a wonderful
HF rig with space for 3 additional VHF band modules (no band modules included).
 This rig does it all! Only rig I've EVER seen that has a digital SWR and
Power Output meter! Neat feature! Also, BUILT-IN AC Power Supply, built in
tuner, and ALL the bells and whistles! Putting this up for TRADE ONLY!
Interested in possibly a Kenwood TS-940SAT w/ options, or what do you have?!?!
Make me an offer! Would also consider the Ten-Tec Pegasus with keypad and Desk
Mic. Would prefer an 'in-person' trade. I am in Beloit, WI...well within
driving distance of Chicago, Milwaukee, or the Twin Cities area, but again,
will consider all trade offers! I do have the original box and manual with
this rig...

73, es gud dx de N9LXX~~~

R. Blaine Fox

You know this whole discussion makes more sense if JC were a girl.  There
isn't a lot of sense in being 14 and female if you can't be a snot.

Dick

Hello to all,

I am seeking advice on equipment selection for a beginner. I am an =
experienced (25 yr.) technician, with knowledge of tube & modern =
electronics. I look to set up a home station for my father (a beginner =
also), and I am particularly interested in Heathkit "SB" gear (like the =
looks and serviceability). Advice on whether this is a good choice is =
also appreciated.

Can you experienced fellows give me advice on what pieces of gear I =
should buy? Antenna setups suggested?
Perhaps in three "levels" : First, a "basic setup". Second, a =
well-equipped station. Third, an "Ultimate" setup.

Thanks for reading!

Regards,

A.P.

There is an email reflector for hams in the New England area now on Egroups!
The focus of the reflector is for New England related ham topics, but all hams
are invited. If you wish to join, please do one of the following:

1. Send a BLANK email to newenglandham-subscribe@egroups.com
2. Visit http://egroups.com/group/newenglandham
```

```
Hope to see you on the list!

Richard,

I tend to agree. While he/she may have a valid "legal" point, I can't help but notice how *badly* kids are treated these days. You know, the "necessary" car at 16, money to buy huge amps for their stereos, pagers, cell phones, more money to "slam" their cars, put funky lights underneath them, hydraulics. I mean, what's 20 grand these days? My, my, how badly they are treated! I hope we never have another depression to contend with. What would they do without all those "necessities"? To see the most recent generations deprived of such would scare me to death. Really! How would they react to having to WALK to school or (HORRORS!) ride a school bus, do without a cell phone, or a phone altogether. Tragic.

The sad thing is, that the abundance of "things" and electronic media has helped in the decline of education. I mean, when it seems that everything is just *there* for the picking, why does one need an education? For the kids coming up today, they have no concept of hardship or the inability to get a decent job. It's all out there, right? They have never really had to work for anything--not all, but most. Parents just hand out money and goods. Instead of coming home from school, and feeding the chickens, gathering eggs, slopping the hogs, watering livestock, many come home to an empty house, a pop-in pizza, and Nintendo. Anything the kids do is OK, and don't the teacher DARE try to keep order or respond to impertinence. It would seem that the rules require that if a teacher comes under attack, he/she must stand there and not dare defend him/herself. I'm glad that I didn't do what I started to do for a career: English teacher. I wouldn't have lasted long in today's environment! The first time a kid attempted to smack me, he'd better have filed a flight plan, cuz he'd be going for a short "flight"! LOL! So my career choice (railroad) was the better one!

Cell phones in school? I may be missing something, but I don't see the need for kids to have them at school. Again, the person *may* have a legal gripe against the school. However, I wonder if it is a matter of resolving a legitimate gripe, OR just a way of one-upping "authority".

Jerry

> You would think that a kid who walked to school would be prepared enough to keep rain gear
> in their locker.

Just a note on this. I walked to school for the majority of the twelve years. Square footage was to much of a priority for books ect. to allow for extra stuff.

First of all ignore all this Mud slinging. You won't hear this on the radio.
then 1)Find a class. 2) find a Ham in your area willing to show you the
ropes. From the sound of it you have this covered already. 3) Study the
technical stuff 4) practice your code. 5)No matter what anyone says enjoy
the hobby for what it is
Good luck and hope to see you out there

Looking for a working used (or new, should I be so lucky) but decent handheld or mobile VHF low band two-way radio, age is not important. Frequencies I will be needing are around 44MHz, minimum two channels, prefer five to ten. I work for a small-town police department (can furnish proof upon request) and am looking for a radio to have in my personal vehicle while working details, etc. Please email me if you have any equipment available that would fit the bill.

I recently got a Cherokee AH-50 HT as a gift and I have a question. I have hooked it up to an external antenna and SWR/Power meter and it only shows 1.5 watts out on high mode.. I thought it was 5 watts out, or is that only if you have it plugged in? I am running it off of the battery.

Still Looking for the perfect trade! Thanx to all who have responded thus far!

Greetings!

Up for trade this time is a BEAUTIFUL Yaesu FT-767GX! This is a wonderful HF rig with space for 3 additional VHF band modules (no band modules included). This rig does it all! Only rig I've EVER seen that has a digital SWR and Power Output meter! Neat feature! Also, BUILT-IN AC Power Supply, built in tuner, and ALL the bells and whistles! Putting this up for TRADE ONLY! Interested in possibly a Kenwood TS-940SAT w/ options, or what do you have?!?! Make me an offer! Would also consider the Ten-Tec Pegasus with keypad and Desk Mic. Would prefer an 'in-person' trade. I am in Beloit, WI...well within driving distance of Chicago, Milwaukee, or the Twin Cities area, but again, will consider all trade offers! I do have the original box and manual with this rig...

Try running it at 13.8VDC, & into a 50 ohm dummy load (not an antenna) to check for output. This is how the mfgr specs the output. Also double check that your watt meter is rated for 50-54Mhz readings......

I don't have any way to hook it up to 13.8VDC. The only plug is on the battery and is only for charging the battery - you can't operate it off of DC this way without a special adapter that both charges and provides power to transmit and the radio itself has no jack for an external power source. The meter is a 6m SWR/Power meter.. I don't have a dummy load, so I can't do that part... I am sure that the 5w is for 13.8VDC, but it's strange that the manual doesn't state that - it states that it's 5w at 12VDC...

Is there a power setting on the radio? Some of them run at lower power when
on battery to extend life automatically nowadays. You may (or may not) be
able to adjust this.

You could atleast wait till you've something worth bothering with before
posting that ad...
Besides.. When you do (that is assuming you ever do, I suppose) get
something worth looking at and decide to repost the link, well.. who's going
to bother?...
Like yelling wolf or something..

Yup - and it's set to High, which is supposed to be 5w... aren't there any
other AH-50 users out there?!

FS: Icom IC-2800H Dual Band Mobile Transceiver with box and all accessories. MARS/CAP modded. Works and looks great. Sell For $450 plus shipping

GENERAL SPECIFICATIONS:
Dimensions (projections not included): Controller: 140(W) x 70(H) x 34(D) mm or 5-1/2"(W) x 2-3/4"(H) x 1-11/32"(D); Main Unit :140(W) x 40(H) x 165.8(D) mm or 5-1/2"(W) x 1-9/16"(H) x 6-17/32"(D)
Frequency Coverage (MHz): (VHF) Tx: 144-148, Rx: 118-174*; (UHF) Rx/Tx: 430-450** [*Guaranteed 144-148; **Guaranteed 440-450]
Mode: FM, AM (RX only; 118-135.995MHz)
Memory Channels: 232 (inc. 12 scan edges, 10 log, 10 repeater and 2 call)
Tuning Steps: 5, 10, 12.5, 15, 20, 25, 30 and 50kHz
Frequency Stability: �10 ppm (-10�C to +60�C;)
Power Supply Requirement: 13.8 V DC �15% (negative ground)
Current Drain (VHF/UHF; at 13.8 V DC): Transmit Max Power: 12.0A / 11.0A; Receive Standby: 1.2 A; Receive Max Audio: 1.8 A
Antenna Connector: SO-239 (50)
DATA Connector: Mini DIN 6-pin
External VIDEO Input: PHONO [RCA (75)]
Weight (approximate): Controller: 290 g/10.2 oz; Main Unit: 1.15 kg/2 lb, 9 oz

TRANSMITTER SPECIFICATIONS:
Modulation System: Variable reactance
Output Power (VHF/UHF): High* 50 W/35 W; Mid-H* 20 W (approx); Mid-L 10 W (approx); Low 5 W (approx)
Spurious Emissions: -60 dB
Microphone Connector: 8-pin modular (600)

RECEIVER SPECIFICATIONS:
Receive System: Double conversion super heterodyne
Intermediate Frequencies: 1st 15.65MHz (VHF), 46.05MHz (UHF); 2nd 450kHz (common)

Sensitivity: 0.16�V typical (at 12dB SINAD)
SQL Sensitivity: Less than 0.13�V (at threshold)
Selectivity: Wide: More than 12kHz/-6 dB, less than 28kHz/-60 dB; Narrow: (Europe/Italy VHF only) More than 6kHz/-6 dB, less than 18kHz/-60 dB
Spurious And Image Rejection Ratio: More than 60 dB
Intermodulation Rejection Ratio: More than 60 dB
Audio Output Power (at 13.8 V DC): More than 2.4 W at 10% distortion with an 8 load
External SP1 Connector: 2-conductor 3.5(d) mm (1/8")/ 8
External SP2 Connector: 2-conductor 3.5(d) mm (1/8")/ 8

I passed my Technician test last Sunday and now it is time to look for equipment. I am handiacapped by the fact that there, apparently, are no (as in none) ham stores in the state of Iowa. So the question is: Where do you all do your mail order business?

PS: I know about Radio City near Minneapolis.

Is there any way to hook up a Kenwood TS-430S to a Computer??

I know this is possible with the TS-440S

The ACC connector on the back of the 430S has some sort of frequency output..

One of the things I would like to do is read the frequency/band into my logging program.

If anybody knows how to do this or of it is at all possible let me know!!

THANKS!!

Using the postcard template in Microsoft Publisher 97 does a great job of creating qsl cards.

Hello Ezat -- try these:
http://hfradio.org/wb8rcr/QSLMaker.html

http://www.qsl.net/vk4wss/software.htm

I have used MS Power Point.
Also used my 35mm camera to photograph a local interest site -- then use
Avery transparent labels for my call and a large Avery label on the back
for QSL info see:
http://qrz.com/database?callsign=ac6v

Good QSLing

Try WB8RCRs QSLmaker.  You can get it at:

http://hfradio.org/wb8rcr/QSLMaker.html

It works pretty well, and it's free.

Xref: supernews.google.com rec.radio.amateur:565

When: Friday, January 5th. Noon.

Channel: Ch-1, Code 0

Places:
Grandfather Mountain. Bill from Gastonia will be on the mountain at noon with the Radio Shack Mobile and a GMRS radio.

Pilot Mountain. John from the Salisbury area will travel to the parking lot atop the mountain. His equipment will include a scanner hooked to an 8-element Yagi. In addition to FRS, the station on Pilot Mountain will have CB-15. (Some of the participants are hams and some are not. That's why coordination is via CB and cell phone).

Others are encouraged to participate as their work schedule allows. The WX forecast is for clear skies and moderate temperatures. It does not require any special equipment to join in. Besides your FRS, it is helpful to have a state roadmap and a compass. This allows you to calculate the approximate bearing to the test stations and to be sure that you have a clear view to the horizon in those directions.

As an alternative to having a compass, you can get approximate bearings using the road map as a guide. (Or, if you have an analog wrist watch, turn it so the hour hand points to the sun; then the numeral "6" will be on the north side of the watch face.)

If you participate, please report results here--even if you only heard the test stations and were not able to contact them. Thanks.

I have noticed strong radio interference at 11.990 thru 12.100, and
again at 13.380 thru 13.500. Its the same type of signal at both
frequencies. Anyone know what this is?

> Years ago, I had a little long-haired Chihuahua that drove me crazy with
her barking when she was in the back-yard. I went to Radio Shack and bought

the cheapest R\C car they had. Took it apart and used only the motor\batt and it's very small receiver PCB. Mounted the thing on her collar and put a small strip of soft plastic on the motor shaft. When I wanted to get her attention, I pressed the Xmitter button, the motor spun for as long as I held the button down. The little flap of plastic would spin like hell, making a slapping sound as it hit her collar. Never failed to get her attention! She would walk around all bug-eyed for a couple of minutes trying to figure out what happened. It got to the point that when she barked, she would crouch down and squint her eyes, waiting for the "buzz". My Wife made me take it off. Said it was torture! LOL

Hello there,

My callsign is YZ7REA and my name is Vladimir. I need your help. Could you tell me if you have a KENWOOD TM-V7A service manual and are you willing to participate in a project concerning this radio along with me? What is it about? Ok, first thing's first. I'll give you a brief description of what I'm planning to do with my radio and if you can give me a hand I'll tell you more... I'm planning to take off the detachable front panel from my radio and keep it at home, while taking my radio to a remote location (my cottage in the mountains) and link 'em together. I'm planning to use a 1.3 GHz full duplex link for this. I know this can be done, 'cause I've done similar experiments in the past, but...What I don't know is what kind of data is running via the connector on the radio/front panel. One contact is +V and the other is probably GND. What about the 2 pins remaining? DATA/CLK, one or two way data? I need this part of the service manual or the complete manual in order to figure this out... Can you help? What's in it for you? We'll not much, but the fact that this crazy idea might actually work, is quite enough. And if it does I'll make sure to mention who gave me a hand. I'll even send you the complete schematics needed for this project, if you like. What about it? Will you help me? Thanks in advance...

PS I've posted this message to couple of mail reflectors, please do not get mad if you read it more than once... No strings attached, if you wanna help it's your free will.

YZ7REA Vladimir

Hi All,

I have several items for sale. Please E-Mail all questions or responses. I have provided suggested prices, but I have no idea if they are fair. Please, if they are not, just make me an offer, I may just accept it. All prices are PLUS SHIPPING COSTS. All items are in working condition, unless otherwise noted. I would consider trading for computer equipment, especailly a late model, above pentium 233 laptop computer, in good working order. Let me know what you have. Thanx for looking.

qty 2. H01WCF4DB5AN 900 mhz MTX9000 series. This radio looks like the MT2000 or HT1000 radio. I know it does conventional and Trunking, but I don't know which type of trunking. They come with antennas and Batteries. They Both have 6 button front display housings, but one of the housings has a broken flex connector, so either the housing needs to be replaced, or the flex itself if available. Looking for $200.00 each.

I have a H01UCC6DB3AN, this is an 800 mhz version of the above, in a plane case, no display or buttons. It also comes with a battery and antenna. This unit also does conventional and trunking, but again, I don't know what type of trunking. Looking for $150.00.

1 HHN4009. This is a Syntor or Syntor X MDC status box. Looking for $40.00.

1 HMN 1015A Syntor Microphone. Looking for $20.00.

1 DES Keyloader with battery, model number T3020 AX, $250.00.

1 DC/RF Alignment meter, made by motorola, but I can't find a model or part number. It looks to be in pristine shape, but I don't have the probe. Looking for $50.00

1 Bird Wattmeter,with N connectors and with 2 slugs, 50W and 250W I believe but will check if need be. This wattmeter also has the RF sample output to connect it to a service monitor. The part number I found was 4275-000. Looking for $350.00.

1 NOS, NTN5578A. this is a leather holster for a Saber radio, comes with the shoulder strap. Looking for $50.00

1 NTN 6128B Speaker Mic for a Saber series radio. This is the easy on and off thunb screw, no screwdriver needed to put the mic on or off the radio.

1 NTN 5866E. I don't know more about this right now. Make an offer

1 HMN 9725D, GP300 and 350 Speaker Mic. Looking for $40.00

1 TKN8531B Keyloader cable, for unknown radio. Looking for $75.00

1 N1274A VHF mobile RF amp, 1 to 7 watts in, about 60 watts out. Perfect to

get that portable into mobile output territory. Looking for $75.00

1 NLN 8858 MX series quick charger. Looking for $50.00

1 Henry VHF RF amp. I have the paperwork for it. I am unsure of the output, but it is around 100 watts or more, and with sufficient cooling, according to the manual, it can be run continuously, like in Repeater service. Looking for $150.00

1 Standard VHF portable, model number HX440V, with battery and charger. I even have an extra charger I think. I am looking for $200.00 for the whole package.

Harbor Industries VHF Mobile Duplexer. Looking for $75.00

1 VHF Progress line reciever, part number PL19E500872G. Looking for $50.00

1 Master charger, quick charger that accepts different cups to charge different batteries. I have the Saber and STX, and I believe the MT1000 adaptor cups. I am looking for $100.00 for the charger and the cups.

I am looking to buy a Kenwood TS-570DG. I saw Burghardt.com sells them for just under a $1000.

Does anybody know a place where they are cheaper than $998 ??

A good, simple QSL card program is called QSLMaker. You can find it at http://hfradio.com/wb8rcr.

It won't make award winning QSL cards, but it will make simple, easy to print cards.

Greetings...

I have up for trade an Icom IC-726 HF plus 6 meter all mode rig. Why buy an all mode 6 meter rig for Big Bucks when you can buy the Full Package for less?!?! This rig is truly beatiful! I think you'd be hard pressed to find a mark or blemish anywhere! This rig has been modified by the previous owner for MARS/CAP operation. I've never received anything but WONDERFUL audio reports from this rig!!! Comes complete with stock microphone, manual, and original box and packaging. Looking to trade for a bit 'beefier' HF rig. 6 Meters is not important, as my 'primary rig' is a Yaesu FT-920. What do you have for trade? Any and all offers considered!

73, es gud dx de N9LXX~~~

I am happy ownerof a icom 706 (the latest version 440) any ways...I do a lot of mobil repeater work and the stock mic does NOT have DTMF capabilities, I purchased the DTMF mic from my local Ham outlet and everyone I speak to says it sounds terrible compared to the stock mic.I actually like the ergonomics of the stock mic better also, but need to have the DTMF functions. Has anyone run into this?? Is there any modifications I can do to the mic to help with the audio quality?

What card stock can be used to make a 4 per page print of 3.5 x 5.5 inch QSLs from standard page size stock with the wb8rcr program?

Seems wasteful to print less than 4 per page (landscape).

Preferably a laser-perfed card, ready to tear.

Im thinking of building a multiband quad antenna. Looking for arm suggestions
along with anything I can learn. Thanks Lew KlNDV

If you live within driving distance, consider your local dealer. If he is 20 bucks higher, well, he might be helpful, and when you need a piece of coax in a couple of months, he might still be in business to sell it to you. Beyond that, call Texas Towers, Austin Amateur Radio Supply, HRO, and AES. There is very little markup in these rigs. All of the prices will be within a buck or two of each other.

If it's a MX-350S...it's a programmable "PROM". It's not so hard to find the blank PROMS....but finding someone (a Motorola MSS) that still HAS a programmer for it will be a challenge. For quite sometime you could get some companies to supply and "blow" the PROM for you, for a price. You send them your list of TX and RX frequencies and presto. Be advised that the PROM can handle up to 48 channels in banks of 12 each.....Eddie

Subject: FRS Test at Pilot Mountain (Results)
Message-ID: <20010106054021.12964.00000082@ng-bd1.aol.com>
Xref: supernews.google.com rec.radio.amateur:586

I arrived at the Ranger Station about 11 AM and picked up a map of the park. Then I drove to the summit, which is about 2400 feet above sea level, and 1000 feet above the valley floor.

Pilot Mountain has been used for tens of thousands of years as a lookout point because it rises abruptly as an isolated peak with a 360 degree view to the horizon. The summit is about 1/4 mile long and 1/10 mile wide. There is a secondary tower called The Pinnacle, but it is closed to the public to protect wildlife. The spot is a favorite with rock climbers because of the height of the vertical granite faces on the mountain, and there were four groups of climbers during my 2-hour stay in the parking lot.

It had been cloudy on my drive from Raleigh to Siler City, through Greensboro and Winston-Salem. However, as I reached the peak, the clouds were swept away by a cold front and the sky was a bright blue. I could see Grandfather Mountain in the distance (75 miles away).

I was amazed at the amount of FRS traffic I was hearing while waiting for Bill to get into position. There was a group adjusting or installing HVAC equipment. There were some families and one day care center using FRS. There was activity on each of the first four channels. I made a few contacts with stations out to ten miles.

I was sitting in the car reading when Bill called me at 11:45 AM. I picked him up on the Motorola T6300 inside the car and the signal was very clear. We ran several tests: My handheld to his mobile. My handheld to his handheld. My GMRS to his mobile. Everything was astounding! Bill did not do a lot of outside-the-vehicle tests because of the 70 MPH (measured) wind speed at his location. He had to maneuver his truck into various positions just to get the door open. (Shortly after our tests, they closed the road to the summit of Grandfather because of high winds.)

When Bill descended to a lower level (to get a hamburger at the Nature Center's snack bar), the signals disappeared very quickly. The implication of FRS in emergency situations is: Have your emergency in a high, clear place. Otherwise, you're out of luck with an FRS rescue.

I remained atop Pilot Mountain until 1 PM. I made a few more contacts, including a nice chat with a ham operator at Fancy Gap, VA who uses Channel 3 as an intercom with his daughter who lives in Mt. Airy, NC. From his location (several thousand feet above the valley), he can talk a LONG way.

Thinking about Bill's hamburger made me hungry, so I eventually went down the mountain and drove to the town of Pilot Mountain. (Hardee's STAR BURGER, all the way, in case you're wondering). Then I drove to Hanging Rock State Park and hiked a couple of miles on one of the trails. It lead to a rock outcropping at 2200 feet and I turned on the FRS. Several stations were readable, but I did not make any contacts. However, I spoke with a buddy on the 146.88 machine in Raleigh and another on 147.255 in Asheboro.

It was such pretty weather that I hung around until they started closing the park. It was a great day in the mountains, and I really enjoyed playing with the radios. Special thanks to Bill for helping with the test! He and I agree that there will be another. On a day with less wind.   :)

Respectfully submitted,
QRM2000

I need some help. Could anyone send me addresses of places where I can buy seconhand or brand new equipment. I am mostly interested in England, Belgium, Holland, Germany. I will go for a trip to England and I would like to buy radio abroad, becouse radioes in Poland are very expensive.

Thank you,

Arek from Poland

Why not just a wire-antenna embedded in the collar?
The Alinco CJ-something 2meter radio I have on my dog's collar seems to
recieve my HT's signal very well over mucho long distances (pretty close to
a mile, I think, but I'm just guessing), and its' antenna's only about 2-3"
long.
Can't say such good things about transmitting with it, but since the dog's
not licensed yet, that's not really a prob...

Hey folks,

Well, I hate to admit it, but last year I had to miss Dayton due to a wedding, and reserving lodging for 2001 just slipped my mind until it was too late.

I've spent over 4 hours on the phone this week trying, with no luck thus far, to find something reasonably close-by the airport (WX permitting, I will be flying a Cessna in from NY for the show).

If any of you kind souls know that you won't be able to make the Hamvention this year, or have a spare reservation, I would be extremely grateful if I could take it over for my wife and myself. I'm not looking for anything fancy, and will take pretty much anything, however closeness to the international airport is kind of important.

Sincere thanks and 73 to all.

Cheers, |The Second Edition of my book

I have a Toshiba Color Laptop, 486/dx33 with floppy, PCMCIA 56K modem, external mouse, battery nominal, case, charger, some manuals. The only thing wrong with unit is battery will not lock in place. Photos upon request.

I am looking for an FT-50...But will consider other trades or cash

I also have more laptop/computer stuff for sale

http://home.cfl.rr.com/mcguyver/forsale.htm

E-mail me for any further information, photos or payment info
mcguyver@cfl.rr.com

Hello All,

I am trying to decide on a new rig right now.

I saw that the TS-570D(G) has a computer interface. Is it possible to run PSK31 through that interface or do I still need something like a rigblaster or another Microphone interface.

I am asking this because my new computer only has ONE (1) comport, and if I still need the Microphone interface for PSK31 and other digi modes I can not hook up this radio to my computer to do logging etc. etc.

Any help is appreciated.

THANKS!

MFJ 1030BX HF Preselector. Works great. $25 delivered contiguous US.

Great to perk up the higher frequency bands on that all band receiver!

Take a look at:

http://www.geocities.com/k6sde/MFJ_Pre/MFJ_Preselect.html

Thanks,
K6SDE

Hello, I have alot of 80-10 meter amplifiers for sale, after the closing of a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable power output, and have a 20DB receive pre-amplifier)

KLV 100 watt unit: $89.99
KLV 300 watt unit: $175.00
KLV 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

KLV 600 watt: $399.99
KLV 800 watt: $435.99
KLV 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

KLV 300 watt: $599.99
KLV 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justindepolis1@aol.com You can also check out my web site for more information:
http://www.geocities.com/ham2way2000/index.html
Quantity pricing available, and prices can be negotiable, thanks, and 73's.

Hello,

I am looking for some CAT software for my FT-847. I have come across the "SuperControl" and "TRX-Manager" software and am looking for others. Are there any "free" verisons out there that you would recommend? Any you would suggest I avoid?

Thanks you and 73!

Jason

Subject: FA: Regency Crystal Scanner w/EXTRA CRYSTALS!
Message-ID: <20010108113553.15901.00000706@ng-df1.aol.com>
Xref: supernews.google.com rec.radio.amateur:606

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206595335

This auction is for a Regency Monitoradio/Scanner, model ACT-R 10 H/L/U. Physical condition is a 9 out of a 10. This is a crystal controlled scanner with 10 channels. It has red lights that flash from left to right to indicate which channel is being scanned. There are two included antennas that screw into the top of the scanner and there are two jacks for antennas - one for VHF and one for UHF. The installed crystals work - they are frequencies used in my area. I can't guarentee how many of the others work with this scanner. Currently installed in the radio are the following crystals: 154.280, 155.100, 155.070, 155.610, 146.940, 146.580, 154.890, 460.425. Also included are: 155.790, 460.320, 158.250, 146.850, 146.250, 453.525, 156.090, 147.300, 146.550, 158.895, 146.070, 147.190, 153.995, 155.835, 154.995, 159.030, 453.925, 158.970, 122.700, 154.010.

Subject: FA: Yaesu FT-415 2 meter HT w/PL DECODE!
Message-ID: <20010108113510.15901.00000705@ng-df1.aol.com>
Xref: supernews.google.com rec.radio.amateur:607

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206594067

This auction is for a Yaesu FT-415 2 meter HT. The HT has all the "usual bells
and whistles" that any other HT has, PLUS PL decode (an optional board for this
radio) - great for finding the PL tone of a repeater. There's a total of 38
memory channels, a call channel and dual VFO's. The tx/rx range has been
increased to approximately 136 - 172 mhz +/- a few mhz, which will allow you to
monitor your local public safety frequencies. There is a fairly new battery,
bought in August. It is a 1800 mAh battery, giving superior operating time. The
condition of the radio is about a 7.5 out of a 10 with various scratches a
little bit of fading on the markings, but not much. The only known problem is
that the mike jack doesn't work. You can still hook up an external speaker and
from what I understand, the mike jack can be fixed. Includes a wall charge and
car charger!

I need to find a source for some new feet for my RX. The originals were cylindrical, 1 5/16" dia., 1 1/8" tall, drilled center hole to accommodate a 10-32 screw, and a counter sunk area 1/2" in dia. to allow the head of the screw to be recessed. These feet were originally a brittle plastic (kinda like Bakelite) with a somewhere between a flat and satin black finish. I am looking for replacement feet that are either machined aluminum that could be powder coated or a nylon-like plastic that can be machined and has the requisite (or close) black color. Any referrals out there? Please reply to this message by deleting "no spam" from the email address.
Thanks es 73,
Chris

>Seems wasteful to print less than 4 per page (landscape).

There's paper out there that is perferated for 2 cards per sheet for post cards... I didn't say that QSLMaker was the best program, but it certianly is easy to use..

I recently bought a Heathkit HD-1410 keyer.

Now I need the component layout and maintenance/troubleshooting sections
of the manual.

Can anyone out there make a copy and send it to me either by e-mail
or by snail mail.   I'd be glad to pay for any expenses incurred.

Thank you.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206594067

This auction is for a Yaesu FT-415 2 meter HT. The HT has all the "usual bells and whistles" that any other HT has, PLUS PL decode (an optional board for this radio) - great for finding the PL tone of a repeater. There's a total of 38 memory channels, a call channel and dual VFO's. The tx/rx range has been increased to approximately 136 - 172 mhz +/- a few mhz, which will allow you to monitor your local public safety frequencies. There is a fairly new battery, bought in August. It is a 1800 mAh battery, giving superior operating time. The condition of the radio is about a 7.5 out of a 10 with various scratches a little bit of fading on the markings, but not much. The only known problem is that the mike jack doesn't work. You can still hook up an external speaker and from what I understand, the mike jack can be fixed. Includes a wall charge and car charger!

I have bought cabling for PSK31 use with my Yaesu FT920. However, I have some problems with it...
The PTT function is working, when transmitting from the program (DX4Win) the radio is in Transmit mode.
The receiving is working, I have no problems reading other qsos going on...
The problem is that it seems like almost noone else can hear my signal when I am transmitting. I tested with a friend who lives 5 km away, he could receive my transmission, but that's the only progress I have made. Could someone give some ideas what could be the problem. I have tried answering many many CQ CQ, but I never get a response.

I bought the cables from Bux Commco if someone has specific knowledge about this version. There is a "Coarse TX Level" "screw" on the box, but I am unsure whether I should change it or not, it was tested "on the air" before shipping to me...

/Jan

Will a magmount antenna radiate efficiently sitting on an aluminum(non magnetic) roof.   The roof is large enough to provide ground plane(about 9' by 16'). Obviously, the antenna will be just sitting there & will not be secure

73

Mike

Please respond to BunnyHop56@aol.com -- I'm placing the ad for a friend.

A Silent Key's equipment to be sold. It's all in excellent condition.

Pyramid PS-26KX power supply $50;
Yaesu G-450XL rotor and controller (w/ cable) $200;
Kenwood TH-79a 144/440 HT with accessories $200;
Yaesu MD-1 desk mike $60;
20 foot 3-leg steel tower $50;
13 element 2-meter beam antenna (w/coax) $80;
Radio Shack PRO-2048 scanner $75.

Antenna, rotor and tower you must take down.

Prices are negotiable. Equipment is located in NORTHERN New York.

My 2000 Gallant has a small open compartment just under the AC controls in the dash. It is just about the perfect size for a 2 meter ham radio I'm going to install. The main problem is that I can not figure out how to take out the tray that is in this slot. I'm sure that I will have to take off part to the front dash but I'm not sure where to start. I also have to remove this tray in such a way that I can reinstall it when I turn the car in. Does any one have any suggestions?

I also intend to use a through the glass type antenna but am not sure if the rear window will work. Is there any way to tell from looking the glass and its label to tell if the glass has be tinted with any conductive material which will prevent the use of a through the glass antenna?

Thanks
Dwight Hebert

Due to a recent berievment in the family, I have a load of radio (and
miscellaneous
electronic) gear to sell.
We live in Maidstone, Kent and any equipment can be viewed/tried before
purchase.
A 10% contribution will be made to charity for each purchase.

I am compiling an online catalogue at the moment, which can be viewed at
http://www.bstard.com/dadradio

Regards,

Paul Waldren.

You aren't friends with a friend of a stereo-installer or something
similar?...
There's usually someone around with the iq to do such things.. Especially if
you're a member of a ham-club....
IOW, Did you even bother to ask anyone before posting here? ;)

Is this on a Mobile Home roof?  If so, simply attach a small length of wire
to the base of the antenna somewhere and attach it to the roof.  Most roofs
are covered with compounds that would render the capacitive coupling of the
mag-mount ineffective or non-existent.

Be careful of small compartments if that 2m rig will run much power (more than 5 or so watts).... it needs AIR to cool it's heat sink, whether fan cooled or convection cooled, or the finals won't last long.

Through-glass antennas aren't much better than using a rubber duck from inside the vehicle....I'd definitely look at other options if at all possible.

I know nothing of Gallants and their ashtrays or removal thereof, but haven't come across one yet that can't be removed.

Bull...  I've noticed no difference at all with my ability to 'hit'
repeaters compared to people with holes drilled in their cars for
antenna's...
I'd like to see an HT do as well, also......

Subject: FA: Yaesu FT-415 2 meter HT w/"PL" DECODE!
Message-ID: <20010111123812.10987.00000526@ng-xa1.aol.com>
Xref: supernews.google.com rec.radio.amateur:630

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1206594067

This auction is for a Yaesu FT-415 2 meter HT. The HT has all the "usual bells and whistles" that any other HT has, PLUS PL decode (an optional board for this radio) - great for finding the PL tone of a repeater. There's a total of 38 memory channels, a call channel and dual VFO's. The tx/rx range has been increased to approximately 136 - 172 mhz +/- a few mhz, which will allow you to monitor your local public safety frequencies. There is a fairly new battery, bought in August. It is a 1800 mAh battery, giving superior operating time. The condition of the radio is about a 7.5 out of a 10 with various scratches a little bit of fading on the markings, but not much. The only known problem is that the mike jack doesn't work. You can still hook up an external speaker and from what I understand, the mike jack can be fixed. Includes a wall charge and car charger!

two years old........"
    The problem will be economics. You can Buy a 202 on ebay or a hamfest for LESS than the cost of the Labor alone someone would charge you to fix it. Just about any place you find to send it to will get between $60-90 labor Plus parts & shipping for any repair, & with new modern 5W 2M HT's selling for $99

- 159, and used ones going for $50-99 bucks, I doubt it would be worth it.
It's kind of like today's 4 head HiFi VCR's that are on sale everywhere for $88 bucks or less, after the warranty is up, repair shops still get $50-70 labor plus parts, & most people just go buy a new one..........

I just checked ebay, & found many good condition working 202's selling/sold for much less than $100. That may be the way to go, & you would even have your extra batteries clip, & charger...all for less than the cost of a repair on your broken one!!

true. If one is dead set on having it repaired (sentimental reasons???) it's well known that the RS HTX HT's were made by the MAXON co. They share quite a bit of architecture and parts with the MAXON GMRS and Bus. band HT's...

>It's kind of like today's 4 head HiFi VCR's that are on sale everywhere for
>$88 bucks or less,

you get what you pay for here. I've yet to see one of these sub $100 wonders give anywhere near the picture and sound that my $165+ Sharp decks (daisy chained to dub) do. And I've seen a lot of them in my day...

last time I wanted to use a mag-mount on my trailer roof, I nailed an
old piece of galvanized sheet metal (about 2 ft square) up first. Solved
2 problems (mounting and grounding) at once.

That's a shame. It's a good radio.
```

I have one for sale. It's part of an estate I'm handling. This one is in excellent condition, and consists of radio, battery, rubber duck, and original instruction manual. I was going to take it to a hamfest and mark it $75.

I also have an Alinco DR-1200T, which is a 45 watt 2-meter mobile rig. It comes with instruction manual and service manual. I have not set a price yet, but it definitely would be under $100.

If either of these will get you "back on the air", let's see if we can make a deal.

Subject: HF Amplifiers 80-15M Sale~!
Message-ID: <20010112050553.05476.00001278@ng-cl1.aol.com>
Xref: supernews.google.com rec.radio.amateur:637

Hello, I have alot of KLV Series 80-15 meter amplifiers for sale, after the closing of a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable power output, and have a 25DB receive pre-amplifier)

KLV 300 watt unit: $175.00
KLV 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

KLV 600 watt: $399.99
KLV 800 watt: $435.99
KLV 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

KLV 300 watt: $599.99

KLV 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justindepolis1@aol.com These units are not intended, nor designed to be used on the 11-meter (CB) band, if you ask, you will be denied service, all can be used on 10 meters with slight modification. You can also check out my web site for more information:
http://www.geocities.com/ham2way2000/index.html
Quantity pricing available, and prices can be negotiable, thanks, and 73's.

Hi
If you still really want to fix it look at radioshack.ca. and
check with their service department
The 202 is still available in some stores, and you can still buy extended
warranty, so they must have some way of repairing them.
As everyone else mentions it will probably cost more than a new radio
although Canadian $ are probably about 60 cents US.

In a message dated 1/12/2001 1:39:19 AM Eastern Standard Time,
cnn1@ix.netcom.com writes:

>Anyone going to be attending the inauguration, and, if so, in what capacity?
>Will you be using FRS there?

Hi, Gary. According to an internal memo written by a member of the Bush transition team, George W's folks are bringing the radios they use on the ranch. At the risk of incurring the wrath of the Secret Service, here are the technical specs:

Frequency: Channel 35
MODE: AM
CTCSS: None
Roger Beep: On
Echo: On (When a Texan drawls into an echo mike, it has an a tendency to scramble the transmission, which improves privacy)

Code Words:
"Dave Made" = Please increase power
"Cut the limiter" = Please speak louder
"Freeband" = There is interference from another station. Switch to the *private* channel
"The Skip's in" = The President has a long-distance telephone call.
"Pin that guy's coax" = We have spotted a threat to the President. Take care of

it immediately!
"West Wing It" = Somebody's watching. Start looking "presidential" like they do on television.
"Switch from the beam to the vertical" = Please bring the President some Viagra.

Note: After reading, please shred, burn, or swallow this document.

I might be interested in whichever one he doesn't take. I have 2 kids
studying for their ticket, and only one old beat-up HTX-202 to share
between the 3 of us - and it usually stays mounted to the handlebars of
my bike.

Don't know about fun and fast but one tip I can give you is to learn to copy by hand writting rather than printing. Before I became a ham I heard one ham tell another he wished he had learned by using hand writing as he found printing took too long especially at faster speeds. I used that tip and never regretted it.

Any mods for this old timer? I've tried the 205/215 mods on it but no
luck. How do you reset the rig anyway? Any info is appreciated.

....a while back I took some lumps for suggesting against buying Radio Shack
ham stuff (HTs inparticular)... they've got a history of exactly the above.

The first message is good advice for those just starting to learn morse... if you can learn it AND do all your copy by writing in script V.S. printing, you'll find that copy at higher speeds (as you reach those speeds) will be easier.

In answer to the second message....
Time-wise, if you spend 20 minutes, 2 - 3 times daily, EVERYDAY (note the emphasis!) you should be able to pass a 5wpm code exam in a lil' over 2 weeks, maybe 3. (Seems to be about the norm for what I've seen as a VE). I've heard the excuses before about 'not having the time'... but I doubt there's many folks who can't find 20 minutes, twice a day, to devote to code for a few weeks (breaks @ work, get to work a few minutes early, park, and practice in the car, get up a lil' earlier & practice before leaving for work/school, skip a TV program, etc, etc....) If you WANT HF privileges, you'll FIND the time, if not, you won't.

As for "fun".... I and many others I've helped reach 5wpm have all used the Gordon West 5wpm learning tapes. He's kinda' corny on the tapes, but some of the corny jokes and puns help the lessons stick in your head longer.

Another point is to write (or print) small. It takes less time to
write small letters and by writing 2 lines in the paper space allotted
for one line, I've found that I can increase my hand copy speed
substantially...

Hi all,

If anyones after accessory plugs, bits and pieces for PRM80 series radios,
pop me an email.
ezyt@optushome.com.au
Worked for a Large Simoco Distributor (ex distributors) as a senior radio
tech. (cant stand another look @ a prm80 series apart from the 8041's.
Excellent radios)

Have a stack of simoco mics, microphones, accessory plugs, few other things
like remote brackets etc etc etc. Basically all brand new in plastic/boxes.
Sorry no radios. Sold them all. Just stuff thats sitting in the garage doing

nothing,, so if anyones interested in purchasing anything , just email and shouldnt be a problem posting stuff or just come pick up.

Regards,

Ezat

Noise can come from the power supply/computer and the monitor. Some monitors can be extremely noisy and one resolution and quite at another.

First, make sure everything, radios, computer, monitor, etc. are well grounded.

Turn off the monitor only and see if there is a change. If so, try changing resolutions.

Take a hunk of coax with a couple of inches of center conductor exposed and use it with your radio as a "sniffer" to see if you can find an especially noisy cable/power cord.

Put several ferrite chokes on any cable/power cord that appears to be noisy.

Was this the one with the membrane keyboard? I always hated that thing! But it was good for running packet back then, along with the TI-99 and the Commodore 64.
I do remember the kit version, although it has been quite a while since I have seen one.

You might check at some of the used electronics stores and the local flea markets.
Do they have flea markets in the UK?

Paul.

find the source of the rfi...
use al-foil / flat coke can etc to help isolate the source
then ya gotta work out a way to sheild the offending component (or paying
the $35 4 a new p.c. p/s) :)

Hello all,,
Ive sold a fair bit already, but heres whats left..
The following gear has all been tested and working. Well the stuff that i could test. =)

1. 5 x Brand New Simoco Microphones (Black Colour) in boxes
2. 1 x Ok Condition Phillips microphone
3. 5 x Brand New microphone magnetic holders(still in plastic and with fuse and fuse holders)
4. 6 x Facilities Plugs with rubbers BRAND NEW (no screws, sorry). if you dont know what their for, external ptt, audio , data from back via db15.
5. 1 x Sigtone Ctcss Subtone Board (Working) . Good condition
6. Tait T500 CTCSS board (working)
7. 1 x Speaker bracket to suit new simoco speaker.
8. 2 x PRM8010 windows and labels (New)
9. 6 x Simoco Mic Covers(Some black covers, some grey.. Suit 8025 and Remote 8030)
10. 6 x Phillips lock screws(hard to find and they do the right job)
11. 6 x Kenwood TK370 battery holders. Used when battery is damaged, and has intermittent on off operation.

12.   10 x Kenwood Tk370 volume and channel knobs (Brand New)
13.   3 x Simoco/Phillips Power Cable sets. (Brand NEW never been used)
14.   PRM8020 Display heads and shell. (4 digit only). Working or not. As is
15.   Motorola Syntrx ORIGINAL SPEAKER. Very Hard to find. In excellent condition
16.   Have 5 x Tait T196 30 watt VHF radios, all working. Come with all brackets microphone and power leads etc. Need to get rid   of them cause theyve been sitting here for ages and never being used. Very cheap.. Just make me an offer on it. =)
17,   1 x Johnson 800mhz 25 watt mobile, with microphone. WORking in near new condition .. Comes with power lead.

If your after radio programming, i do them very cheap. can basically program all kenwood uhf and vhf, Phillips uhf vhf, Motorola, Tait and a lot of portables ..
or if you want a programming cable, I can cook one up for you. =)

Well thats about it.
If your interested, please email me back on what you are interested in and an offer. Will send only gear around australia. Im looking for an Antenna tuner if anyones interested in a swap. They can take the lot if its an ok Tuner. Needed for a TS430s Kenwood.

Regards,

Ezat

Anyone know anything of this microphone?

I use it and it sounds great, funny thing is, it just has an insert and no amplification involved within the microphone. If anyone knows any info on this mic, would be appreciated.

Tnaks in advance

Ezat

I've had one since 1972 or so. First used it on an ol' NCX-500 --
then on my TS-520. It's now on my IC-551. I have *always* gotten
Very Nice compliments on the audio quality.

I have a second one (that came from my father's estate) on my IC-251.
That rig requires a pre-amp in the mic., so I built a wee one in
the base of the Shure and it works FB.

I don't know what you mean by "...it just has an insert...".
There were 'power mic' versions made -- maybe a different model
number was used. I think those first showed up back when a
Power Mic was *the thing* to have with CB'ers -- so you could
hear the wife in the kitchen at the other end of the trailer.

73 es HNY!

Its got a very base driven hump sound which i like.  Is that how yours
sounds?

Its been a very good microphone and never missed a beat.  Does Shure still
make microphones in this range?  I know they make studio microphones.

Regards,

Ezat

Looking to trade a 2m HT with 3 amp power supply for either a 220 mhz HT or 440
mhz HT. The radio is a Yaesu FT-415 2m FM HT. tx/rx coverage is aproximately
132 - 174 mhz. Features include all of the usual "bells and whistles" to
include DTMF DECODE - a great feature for finding the PL tone of a repeater!
The physical condition is an 8 out of 10 with some scratches. There is a new
battery bought in August and hardly used. It is a 7.2v 1800 mAh battery.

Included accessories are the wall charger and car charger. I will also throw in
a 3 amp power supply so you can use it with a base antenna. The only known
problem is that the mike jack doesn't work properly, but I have been told that
is fixable. If you have any questions, email me!

Many of you may recall the great "Ham Radio" magazine, which was perhaps the premier technical journal during the 1970's and 80's. My old copies are getting really dog-eared, and I was trying to find if anyone had published back copies of "Ham Radio" on CD, the same was as QST/QEX etc? Any ideas?

If not, who owns the rights to these publications? Perhaps we can motivate them....

There any 2meter radios better suited for mounting on a dog-collar than the
Alinco credit-card sized CJ-whatever? My dog always returns to where I am
when hearing me call him on the radio (I have a hard enough time calling him
from accross my small backyard without it), no matter how far off he's
walked from me in the woods, but that radio's sort of 'strange looking' to
other people when they see him and it tends to snag on things as he's
running around.. ;)
Sure seems like a 'natural' for hunters with their dogs, but I've not been
able to locate anything at all related to that, either.
Thanks.

The shure 444-D, black mic is a good one and can be used when an impedence such as that for a yaesu 920,990,1000, 726 etc. can be called for. It is a very good mic. and I have used one in the past with good results.

The shure 444 which is a silver\gray mic., is not as good and picks up a lot of 60 cycle noise etc.

Patrick

Strangely the news has all faded about an object seen in the sky over South Island, New Zealand on Friday afternoon, I think. (GMT +13). It is bright summer here, but there had been a very loud thunderstorm in Dunedin, further south on the South Island.

Where was our object seen? The news said a pilot at 20,000 feet saw it for 15 mins, and there were several reports to the police of sightings.

It was labelled as a probable meteor, and as such I think it deserves more discussion as to colour &c to get its composition. Were there any meteor trail radio wave reflections causing long distance communication at unexpected wavelengths?

The vast majority of the public were well satisified with the explanation provided, hence the lack of interest, it's not a viable conspiracy.

Whilst it's definitely not legal to be drunk in charge of a vehicle, the cost of pursuing the pilot, the issues of international jurisdiction, the relatively low air traffic in the area, and the absence of radar data, meant that the incident did not warrant the considerable additional resources needed to arrest the pilot, who might well avoid prosecution on a technicality.

I suppose next year the NZ police could set up a speed camera and radar, but Sod's Law says that a drunken Santa will take different route home to the North Pole.

The sort of conspiracy I was thinking of was was co-ordinated malicious
reporting to lead people astray - misinformation - prank for season.

> Whilst it's definitely not legal to be drunk in charge of
> a vehicle, the cost of pursuing the pilot, the issues of
> international jurisdiction, the relatively low air traffic

That means it was not a meteor trail, then, since they do reflect radar.

meant that the

does anyone know anything about the antennas used in transmitters for car
alarms or garage door openers?  i'm in search of a small antenna for a
vibrating dog collar project.  also can these antennas transmit more that
just continous tones or are they limited in thier bandwidth?

thanks

jeff

Jeff,

These gadgets typically run in the 300 MHz garage-door-opener band. They are really low power, and sthey are narrow bandwidth so they can send only a few kilohertz of info.

You can buy ICs to do this job from several suppliers, but I don't have any references handy. I think that even Digi-key sells some of these chips.

Might be the supply, might not be. There's many components in there which can emit RF on amateur bands, many newer versions of components have failed to correct the problem even though it's been there for some time. I have a PC in the shack which is only a couple of years old and it still causes noticeable problems on 146 MHz.

And yes, moving the receiving equipment away from the source of the noise is one of the primary recommendations of the FCC for handling RFI, and a good place to start.

Jeff,

The antenna is just a piece of wire 1/4 wave long, or a loop of wire
that is tuned to resonate at the desired frequency with a capacitor.
Nothing to it - if you have a means of testing the resonant frequency,
such as a grid-dip meter, a spectrum analyzer or a frequency counter.

The ham radio literature tells how to test the resonant frequency of a
circuit. Try reading the ARRL Handbook for more info. Get it at the
local library if you don't want to spend $30, or find an old one at a
bookstore or hamfest.

Actually I believe that the receiver is very wide band because the transmitter is probably not crystal controlled. If it were narrow, then the transmitter would drift out of the receiver's reception band. I think the receiver may even be a regen or TRF receiver.

There usually is a loop of PC board trace that acts as the antenna. The
loop doesn't have to be very big to radiate at 313 MHz.

Grid dip meters usually don't go up to 313 MHz. They usually poop out
just above 2 meters.

Probably could use a freq counter if it's close enough.

N833R World's Oldest Debonair? s# CD-2

I see this thing was cross posted to many newsgroups. I will see answers only in rec.radio.amateur.equipment.

Maybe and maybe not. Probably not, unless it is a big move.

With well designed radios and outside antennas you shouldn't hear the computers.

For instance, My HF rig is setting directly under a 19 inch monitor and directly over the computer (which has the cabinet removed.)
Directly to the left of the HF rig is another computer (bout 3 to 4 inches from the rig) and the monitor for that rig is adjacent to the one over the rig.

There is a third computer and monitor about two feet to my left. That computer also has the cabinet off.

All three are networked and the router sits adjacent to the computer that is just to the left of my HF rig. The ISDN router sits under the network router.

My Antenna tuner is to the right of the HF rig and the coax cables run together with the various lines from the computers. My VHF/UHF rig is adjacent and to the right of the antenna tunner and the spare HF rig is above the VHF/UHF rig and just to the right of the 19 inch monitor.

Oh...The henry 2K4 is immediately to the right of the UHF/VHF rig.

An HT setting on the desk will hear the computers.
The VHF/UHF rig which is connected to an outside antenna does not.
Running a full KW does not bother the computers.

I have taken no special precautions in either keeping the RF out of the computers, or the RF inside the computers from getting out (covers off the two)

What I have found is that the modem I had prior to going with the ISDN connection was a really bad radiator where the HT was concerned and could be heard as much as 20 feet away. It was still not heard by any of the base station equipment.

Currently the station is not grounded except through the AC line.

That is due to a back hoe catching my ground system and pulling the whole thing out through the basement wall. At least they didn't get the rig, but they sure made a mess of the one part of the basement wall and cracked it almost to the foundation in one spot.

Unfortunately I could buy one whale of a *nice* station for what it's going to cost to repair that basement wall next spring.

Roger (K8RI)

That radar, specially designed for meteor work, being at Birdlings Flat,
south east of Christchurch, would the meteor have registered on it?

For Sale: Tentec RX320 PC Controlled shortwave receiver.
Price: $250.00 + UPS Shipping
Receives: 100 KHz to 30 MHz controlled totally by PC. Has
digital signal processing capability. Sounds outstanding on
SSB.
Modes: AM, USB, LSB, CW
Memories: Limited only to PC's hard drive space
Condition: Excellent
Software: Will include CD-ROM with latest Tentec software and
a bunch of shareware packages I've downloaded from the WWW.
Accessories: Manual, telescoping antenna, RS-232 cable,

power supply, and aforementioned CD-ROM.
Reason for selling: Purchased Icom IC-R8500.
For more information: http://www.tentec.com/TT320.htm
Payment method: Pre-Pay with US Postal Service Money Order or via PayPal.
Please E-Mail me at halligan@mediaone.net if you have any interest.

I want to thank all for the input and assistance. I have more than enough information now.

I can, in the future, provide info for those whom need it for the FT-101 series. One of my procurements through all this was an original Maintenance Service Manual - FT-101 Series.

Happy Holidays to all!

Thanks Again!
N0DGN

Hi,

I have a vintage (1944) communication radio from the Swedish army for sale.
I don't know much about this stuff, but contact me if you are interrested.

The unit appears to be in good shape, but the power supply, antenna and
ear/mouth-piece is missing.

//Bj�rn

i need to construct a transmitter and receiver that can operate a small motor. the motor needs only a constant voltage so i thought some type of cw transmitter would be in order. could someone point me in the right direction as to how to do this? the transmitter doesnt need the greatest range (about 1/4 mile), but the ability to tune both the transmitter and receiver would be nice but not necessary. the receiver does need to be rather small and i would like to use an antenna like that in a garage door receiver, but havent been able to locate an information source on these coiled antennas. any help would be greatly appreciated.

thanks much

Jeff

Hi
If you are an amateur radio, electronic or computer buff, my all free, no catches, no banners and no ads website will entertain you over the xmas season
(and beyond)

Over two years in the making, the site offers the following :

Aerial Projects - MW , HF , VHF, UHF , Tuners etc.

Online Morse Tests

RTTY & Data modes projects and information

SSTV Mode rx and rx / tx comparators , free downloadable guide & more.

Paket Radio - Real Time Gateways (click n go) , Links & Information.

Electronics - Projects , Downloads, Information, Circuit Diagrams.

Computing - Hints, Tips etc.

Downloads - Software , utilities , ham progs , data mode software , HTML editor , Great Circle Map software, ALL FREE or SHAREWARE Programs !

Links - An awesome list of links for the hobbyist ! UK & Worldwide resources. DONT MISS my 'Favourite Links' Icon. It lists a wonderful set of URL's !

Search Engines - Over 35 to choose from !

World Clock - Well , it comes in handy :)

Enjoy a Visit !

http://www.bri1.btinternet.co.uk

People who are serious about the radio control hobby get an amateur radio license, and use the six meter ham band (50 - 54 MHz). That way, you can do your thing and not worry about legal troubles or messing up the spectrum for others. There are plenty of kits on the market, see the Nuts 'N' Volts magazine for more information, and you might

find some of the rec.radio.amateur.* newsgroups to be more
helpful.

I think if it is good shape you would like it. A friend of mine has one which
he used for few years.
He now has one of the dc to light yaesu xcvrs, but still uses the 430.

Here's a followup to my earlier post:

Surf over to:

http://griffy.nmt.edu/sara/sara/finley.morse.html

for an excellent explanation of how to use the Koch method. Written by
Dave Finley, N1IRZ, it does an excellent explanation of the method, how
to use it, and why it works better than other methods for most people.
(much better than my earlier explanations). Good bibliography and a
detailed explanation of how to do it with Super Morse.

All that you really need to know is right there.

Koch first published his method in 1936, but it got little ink,
probably because there was no way to easily implement it at the time.
Computers changed all that.

A group of Koch's students back then achieved 12 wpm solid copy in just
13.5 hours of practice.

I have no connection to N1IRZ - don't think I've ever heard or worked him on the air. His stuff is right on, though.

> That's it. No catatrosphic happenings...

Which models do die from the battery? My friend owns a TS680S, will that
suffer and is it possible to replace the battery on that yourself?

Many thanks for the advice in advance.

Regards

Bartek

PS Thank god for these newsgroups, if I didn't read the posts here then we
would have probably not known about the possible solution and Kenwood would
have gotten even richer still!

You can try also some of the Radiolink experimenter kits from the dreaded
Maplins. Intended for use from PC to PC but theres literally loads of
information with them as well as there being plenty available on the web. And
being UHF modules you only need a small antenna.
Expensive perhaps at 20 pounds for a xmitter and the same for a receiver.
Also, why not have a look at this site, its one of the best and he mentions
building radio control stuff ....

 Lets do a correction on part of that...The TS430 Does NOT lose its
"brains"
when the lithium battery quits, just its memory programming which then
will need to be reentered each time the rig is powered up. That's user
memories only. (it was an ICOM that I had that lost it all).

Dick

I must be a real ham then, since I don't use them. But some people do
and no description of a rig is complete without them.

I am using version 1.0 dated 12/15/99.

Does anyone know where I can get a later version or any patches
for the sw itself.  I am having problems with bad file saves and
I know the system is ok.

Please email direct:  josttech@mediaone.net

     Thanks in advance,  John w1hzh

Will trade 7-pin type for a 9-pin tv tuner socket extender. If you don't
```

need a 7-pin I will buy the 9-pin type.
Thank you
Greg

Hi, all,
```

I'm setting up a secondary station out in my barn, so I can monitor APRS activity while I'm out there working. I don't need transmit capability, just receive.....I have a TNC in the house, but would like ot monitor out in the barn......does anyone know of a program that will allow me to do that with my older computer (100mhz pentium, 32 mg ram), or will I have to go but another TNC anyway?

Thanks,
Rick N9GSU

Hi John

Have you tried the FT90 Egroup ?
They may have some info. http://www.egroups.com/group/Ft90
I use RT sytems software not ADMS so I can't help

I have a NIB Orbicomm Model # KX-7101 Data Communicator with all hardware,
manual and GPS antenna (magnetic)
Follow link for detailed info. Unit sells for $895.00 and is BRAND
NEW/UNUSED
Photo upon request

http://www.panasonic.com/industrial_oem/satcom/products/kxg7100.html

Quick specs:

GPS - 8 channel (1575.42MHz), RX sensitivity -130dBm, 2 min aquisition time
Unit itself:
12-24VDC powered
Sat transmit - RS232C up to 9600bps
I/O - 2 digital inputs / outputs, 2 analog inputs
Freqs: Uplink- 148-150MHz(2400bps)
            downlink 137-138MHz(4800bps)

I will accept reasonable offers - I need a pentium laptop, will consider
trades..

: Brian wrote:
:>
:> Plateaus? What plateaus? I've been told that I'm the only one who ever
:> experienced a plateau.

: STILL not paying attention, I see. You just wanted to stay on yours. So
: you did.

Actually, the 10-12 wpm plateau is well documented. The reason it exists is that people learn the characters by the individual components. In other words, they learn a to be "di" "day", rather than learning the sound of the character as a whole.

The mind can only do this translation so fast, no matter how much you practice. You have to transition to listening to the sound of the character, and later the sound of the words or even phrases, if you want to get your speed higher.

To learn anything quickly it is best to forget the reason for learning it for a while...theres nothing worse than being halfway through copying a QSO when a stray thought or dream of being the next DX champ enters your head....or when you are learning to drive suddenly putting your foot down to emulate michael Schumacher....do this and you are back to square one.
The key is to have morse playing in the background while you are sitting doing nothing and try and concentrate hard on NOT copying it....just let it play and instead concentrate on another aspect of it, the rhythm for example.
You will find that once you can do this with little effort that characters

appear in your mind almost by themselves, all the time remember to keep your concentration on the rhythm, training your brain that this is not a trick, that all characters appear at one speed

Xref: supernews.google.com rec.radio.amateur:431

Folks,

I am a new HF operator with a Kenwood TS-440s with built-in AT (antenna tuner).

For a `newbie' the factory manual for this rig is terse reading and seems to assume some operating knowledge on the part of the reader.

I have questions about SSB operation and power output.

Am I correct that during SSB transmission, the CAR control has no effect, and should be fully counterclockwise? The implication of the manual is that MIC control controls power output, right? During transmission, power output can then be read with the meter switch at `power' - right?

Also, during AT tune, does it make any difference what MODE the rig is in? Or are there unique control settings for each mode, during the AT tune process? If so, I think I can understand them from the manual if point one can be ascertained.

Sometimes the simpliest things need answers....

Thanks in advance,
Bill
KC0IZI/AG ;-)

Wouldn't make much difference where it's set when in SSB mode... it DOES
make a difference in CW, AM, & FM.

> The implication of the manual is
> that MIC control controls power output, right?

Stands for Mic Gain........ In SSB mode... Yes.

> During transmission, power
> output can then be read with the meter switch at `power' - right?

Right.

> Also, during AT tune, does it make any difference what MODE the rig is in?

No... as the Tuner works, the rig will put out a reduced power carrier (CW)
while tuning, regardless of mode selected.

The Real Techs pioneered amateur VHF/UHF in the 50s. We generals
were in awe of those guys and couldn't hold a candle to them.

 Not where I come from. Those two guys both held old Class A, or
Advanced tickets. Used converted WW2 rigs known as SCR522's. I looked
over the shoulder of one as he made the conversion. What a job that was!

It is my understanding that CAR sets the transmitter power (i.e. CARrier level). It should be set fully clockwise for maximum transmitter power.

The MIC control sets the AGC (Automatic Gain Control) loop in the audio circuitry to make sure that the audio signal levels are in the appropriate range so that the full ouput power is achieved. This only indirectly affects the transmitter power. To adjust the AGC setting, (1) set the meter switch to the AGC position, (2) connect the antenna socket to a dummy load (or a good antenna on a frequency not "in use"), (3) press the push-to-talk button, and (4) while speaking into the microphone at your normal operating voice intensity, adjust the CAR setting so the meter indicates that AGC is operating in the portion of the meter marked in thick red. Set it to the minimum setting to ensure that AGC is activated. Setting CAR too high (i.e. too far clockwise) may overdrive and cause distortion and undesirable "splatter" from your transmitted signal.
~~~~~~~~~~~~

With the meter switched to 'power', you can view the power delivered to the coax at the antenna socket. If a good match is not present, then some of this power is reflected back into your radio. This is indicated by setting the switch to "swr". If the SWR is not between 1 to 2.5, you may need to improve your antenna system. Generally, I leave my switch in the 'agc' setting to make sure my audio signal is operating in the right range. After CAR is set, it usually doesn't vary if AGC is operating properly.

>
> Also, during AT tune, does it make any difference what MODE the rig is in?
> Or are there unique control settings for each mode, during the AT tune
> process? If so, I think I can understand them from the manual if point one
> can be ascertained.

The antenna tuning is the same for all modes. If you tune it up for SSB, it should also be tuned up for CW, FM, or AM. You should not need to "retune" if you switch modulation methods. Tuning attempts to match the output impedance of your transmitter to the impedance presented by your antenna system. These impedances are independent of the modulation used. In fact, it appears that the radio automatically selects the CW mode to perform the automatic tuning process, regardless of the MODE setting.

I had a 430 new that exhibited a common problem, I was told. Well, when the rig got warm, the synthesizer would unlock, rendering the radio unusable until it cooled down. I sent it off for warranty service and the problem was corrected.

Philip

Hi,

I used to own a Kenwood TS940SAT and own the Heil boom mic/headphones and will shortly be getting the Yaesu FT1000MP.

Could someone please let me know what the pinouts are (ie what changes I will have to do when I replace the plugs and get the soldering iron out !!!)

Best wishes for Christmas/New Year to everyone on the list.

Steve B (ZC4BS)

I have a HEATKIT LINEAR AMPLIFIER Model SB-221.
I remember that some years ago a paper was published of how to equip this amplifier with a STAND-BYE SWITCH.
an unfortunate oversigth of the Heatkit builders.
Is there anyone who could give me some info how this can be done using a switch?
My email: paver @zianet.com
Peter.

IF people are interested in this, don't you think they'd bother to check out
your 'forum'?
Or how about just posting it here once a mnth instead of every ****** time
there's an update?...
As-in.. what would happen if every retarded club (I think I'll create one
for hams who own turtles) posted this here atleast once or twice a week?...

Because many of us enjoy seeing the regular updates. We also know how to
read message Headers and hit the "DELETE" key (or in my newsreader "rm",
just plain "DON'T READ THE MESSAGE") if it's something I'm really not
interested in. If you read every single posting in every newsgroup you're
subscribed to, you probably don't have much time for anything else (like
driving your 'Vette, if you have one.)

IF people are not interested in this don't you think they would probably not
read it? Duh!

Or how about you spend your energy writting a FAQ and post it once a month
rather than whineing and crying every ******* time people aren't doing
things the BD way.

As-in.. what would happen if every retarded net cop like you who thinks his
way is the only way didn't piss and moan because THEY don't like
something?...

Are we going to have to see this  list posted everytime some Ham buys
a Corvette. This BullSh*t is far more rediculous then SPAM.

If this crap keeps up I will start a list for hams that own cats or
dogs and post the damn thing here everytime somebody gets
a new cat or dog..  Will also have Obits..

Looking for opinions..

Bob

If I didn't know better, I'd swear you had a crush on me, glenn..
The way you keep following me around..
Now, wait a min.. I don't know better.. "In this twisted world we live in.."
I'm not your type, tho, glenn.. Sorry (yeah, right.. GTH glenn..)
Now, I know why you're attracted.. uniforms, hand-cuffs, and stuff like
that..
I'm not that kind, tho.. Only a topic-cop..

And for anyone who has no idea what your prob is, I'll include the end of
our little spat where I proved you wrong and you then resorted to
name-calling.. Ok, glenn?
It's appended to the end of this post..

"Glenn" <glenn.hansen@usa.net> wrote in message news:kgQ16.191341>

I knew you couldn't continue the argument, but that you wouldn't ADMIT
defeat...
"poking the dog"... Yeah... I guess that's the best one can get from the

looser nowdays...

Re-read my reply to you and show how what you said is correct.. OK?
You weren't "prodding the dog.." You thought you were winning the argument.

Subject: FT: Nice Kenwood TS-440SAT
Message-ID: <20001226010340.08122.00006547@ng-mi1.aol.com>
Xref: supernews.google.com rec.radio.amateur:459

Greetings...

I STILL have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer? I had this up on eBay, but the high bidder is not responding, and as I said, I'd rather trade anyway!!!

Tnx, es 73 de N9LXX~~~

No BD, I am not your type. Go troll for homosexuals elsewhere, certainly not
on a ham group. I read many ng's and when I see you doing what you denied I
point it out. Again and again and again.

> I'm not that kind, tho.. Only a topic-cop..

Tin horn net cop. You denied it and I just like watching you project. Name
calling! BAWAHAHAHAHAHAHAHAHA! you are such a hypocrite.

Now jump little dog. Thought my hoop again boy!

Glenn

Is there some reason YOU can't seem to let someone gripe?

You seem to have too much time on YOUR hands.

Now go be a good little boy and sit in the corner and suck on your thumb.

Nobody with a Gun to MY head. I just figure that if "Hams with
Corvetts" is OK I can start a list for "Hams with pets" and you guys
that think it is inappropriate can set your spam filters.  <G>
It IS somethitg I have always wanted to do.

Just my opinion..

Bob

Hi, all,

I have a MFJ 1270c, that I'm trying to hook up for receive only APRS....and I
don't have a manual for this TNC.

Oh the back there is an 1/8" phono jack that I thought was for audio in...but
when I run a cable from the audio out of my scanner to that jack, no audio to
the TNC...can someone tell me what I'm doing wrong?

Thanks for any help,
Rick

Oh, but I can't gripe about the gripers. BAWAHAHAHAHAHAHAHA!

> You seem to have too much time on YOUR hands.

And you? Are you also a part-time wet-nurse?

> Now go be a good little boy and sit in the corner and suck on your thumb.

WOW! You really cut me to the quick. Did you come up with that on your own
or did mommy have to help you out (agan)?

Sounds good Bob. We really don't need censors and BD type tin-horn net-cops.
All telling somebody what to post causes is additional crap like this. :-)

How about Hams with Vette's and pets?

Happy Holidays!

Glenn

Ignore Glenn, he has been a problem for the radio related newsgroups for
several
years.  He is sorta the "Villiage Idiot" of ham radio.

We should probably feel sorry for him.

This is pretty funny Glenn, since you were CAUGHT RED HANDED posting
messages on rec.radio.swap posting messages looking for "young gay
amateurs".
Not long after, you had to find a new ISP.

So why don't you lay off this NG & go away?

Poor loser, eh BD. Exposed for what you are and off you go. Duh!.

Sorry BD, happily monogamously married and not interested. So sir, please quit trying to hit on me. Not interested bub.

Now jump through the hoop one more time like the trained dog you are.

Now jump BD, Jump!

People.. Please just ignore the sissy-boy from now on...
If I had known about him before, I'd certainly never have lowered myself to
his level....
Which he loves for guys to do, btw, but that's another story..... Just look
at what he said below...
He's actually wanting me to play dog-in-heat with him. PUKE...

Still trying to think for others and tell them what to do. Some things and you never change, eh hypocrite!

Your impression of a trained circus dog is impeccable!

Jump through the hoop ONE MORE TIME BD!!!!

JUMP!

ROFLMAO!!!!!!

PLONK!!!!!!!!!!!!

```

Does anyone have an operating guide or owners manual for a Johnson tranciever
tester. Is there any where I could download operating istructions for this
equipment? If you can help me please email me. Thank you in advance.

Sorry Richard, I didn't have a problem with it, I just found it fun to point out BD trying to control you and your posts and watching him hoop jump. Mark up one for the tin horn! Surprised you caved in. You have as much right to post you ham related stuff as anyone else. Go figure.

Glenn

That really didnt help..

I looked on the ftp server, but to no avail..

```
Anywhere else i can find information regarding this pinout?

regards

ezat

Go to: http://216.133.235.165/Amateur/ and look at connectors... It gives
it. That is the download site

Thats what i thought,

then i noticed a very dramatic drop in transmitter output going through a dummy load.

 Naw, you gave up on yourself many years ago. If you couldn't do it then
don't bother trying in retirement.

Before you send somebody to look at a site it is considered POLITE
to tell them if they have to join some S**THOLE list or egroup or sign
up for something. Thats nothing but SPAM and you are a spammer...

Just my opinion..

Bob

I am considering getting a DSL computer connection
and wonder if it will give me a lot of RFI. Does
anyone have experience with this?

Just got rid of US Worst aDSL after 20 months. Never noticed RFI from my
Cisco 675 external.

Anyone want to buy a Cisco 675?

>up for something. Thats nothing but SPAM and you are a spammer...

No need to be rude about it. It's very easy - if they go there and don't want
to take the 2 seconds to sign in, they don't have to. Egroups doesn't use that
info in any way, so it's safe - I've logged into egroups for quite a while and
never got anything unsolicted from them. Since I'm posting again:

I have created a special database where you can enter information on nets that
are held on 2m, either on repeaters or simplex. Please visit
http://egroups.com/database/2mallmode for more information!

Please note - you have to "sign in" to use the database, but it only takes a
second and it's nothing intrusive.. you can give all fake info if you want!
They'd never know!

I have created an email reflector for New England Hams! All hams are welcome,
but the focus is on New England. If you are interested in joining, do one of
the following:

1. Send a BLANK email to NewEnglandHam-subscribe@egroups.com
2. Visit http://egroups.com/group/NewEnglandHam

Thanks for your interest!

RADIO FLEA MARKET in BEETSTERZWAAG.

The flea market takes place to - 26 May 2000. Do you look for an exotic transistor kit or a super recipient, fixed and do manufacture kit... or do meet of radio friends? Dan comes Saturday 26 May to the Friese radio market into Beetsterzwaag!

Many thousand visitors come each year from the entire Netherlands and Europe to this radio flea market spectacle, approx. 100 dealers, with most diverse articles, like senders - recipient - power supplier - antennas - software - hardware - drawer books - literature.

Additionally of businessmen in the place also a flea market with many
attraction organized for large and small.
There is unfortunately no sales desks free on the radio flea market more,
but you can reserve suburb, announce,
for the year 2002. Is possible also by telephone & email, contact on to take
with the executive committee.
Down are these addresses.

How does one find after Beetsterzwaag? From direction Apeldoorn = > Zwolle =
> Meppel = > Heerenveen = > Drachten,
departure after Gorredijk Tijnje comes departure (28) Beetsterzwaag.

From direction Bremen = > Groningen = > Drachten = > Heerenveen, departure
after Drachten Haven comes
departure (28) Beetsterzwaag.

On 2mtr, 145,650 Digi Meppel and 145,700 Digi Joure can one to instruct
leave themselves. Inlet is from 09:00 to 16:00 MESZ,
into which Cafeteria one also boarded into this time.

This whole is organized of VERON FRIESE WOUDEN. Cordially Welcome in
Friesland on the FRM!

Contact people, are:

Learning code at 10wpm, twice the current criterion for the Amateur
Extra license is "giving up" on yourself? I guess if I were a better
Christian I would nail myself to a cross, too.

Sorry Dixie, I'll never measure up to your outdated standard. But I'll
never let you run me out of amateur radio either. But you're welcome to
keep trying. I think thats all that keeps some of you OFs kicking.

Learning code at 10wpm, twice the current FCC mandated criterion for the
Amateur Extra license is "giving up" on yourself?  I guess if I were a
better Christian I would nail myself to a cross, too.  Can you blow
bubbles through the holes in your hands?  Zealots!
```

Sorry Dixie, I'll never measure up to your outdated standard. But I'll
never let you run me out of amateur radio either. But you're welcome to
keep trying. I think thats all that keeps some of you OFs kicking.

Its only one more year until my license expires, so you got your work
cut out.

Goodest of Luck and Bestest of Wishes, Brian

So while you essentially ran yourself out of ham radio by your own
ignorant stubburn attitude for most of your adult life you accuse
someone else of being responsible for your faults and deficiencies.
Right, we got it.

 Not to worry Brain, you'll got no uninvited flak from me. I just
responded to your continued inane drivel in which you continually blame
everything on someone else. Oh well, that's the modern way. You be a
thouroughly modern fella.

Hummmmmmm are these the Motorola MDT's if so you will need the system
freqs the MDT id from console of public saftey group. This info is
not for public. This is done with MDC1200 and MDC600 in some cases.

Best wishes

Huh? I'm certainly not responsible for your silly butt.

> Right, we got it.

Obviously not. You bed-wetting dicktators can't stand it if everyone
else won't worship you at your altar. Tuff! Get used to it. It's
over.

," he says as he pulls on his Jack Boots, fastens on his CW-Forever
armband, and places the Rettysnich under his arm.

He issues The Order.

Round up all the NCT's and CBers and send them to Das Camp. Play high
speed coden tapes on the PA system 24/7. Dat which does not kill them
only makes them stronger hams. It es for their own gud.

Hi all,

new to this NG, not new to usenet or ham radio. I recently put my 10m station back on the air after a couple years break from the hobby. Have place the transceiver on the desk next to my 2m packet gear and have had a ball working the coasts of US plus down into SA and the Caribbean again.

However,

When the computer is running, or turned on, while the 10m rig is on, I'm getting tremendous amounts of RFI into the rig, especially when the HD is reading/writing.
The problem I have is that my operation position is such that there's not a lot of room to move the rigs away from the computer, coupled with the problem of running indoor antennae.

Any help is appreciated. I can of course operate without the computer on, but I use a friend's packet station's callbook when working 10 and would rather have it on than not if I can...

TIA

Dave, N0TXW

Brian,

Unless there's something really amiss or they change the law, you'll be eligible for Social Security in 2020 (but your benefits will be reduced about 26%). And you'll be eligible for full benefits in early 2024.

Of course we all should be socking some away in an IRA/401K/SELP plan (any and all that apply).

Dave
It may be the hd or maybe not. Ont thing WILL give RFI, & that's the
monitor. It puts out an awful racket of rfi. try moving it away from the
radio equip. Reroute your antenna feed if necesary. If nothing works because
of your linited space, you'll have to resort to rfi filters. If you have old
CPU's, or fax machines etc around, the power switch assy usually has one.
It's worth trying

Ooops, you're right. Dick will be happy to hear that I'll take up
learning high-speed code in early 2024. Thats almost 3 years earlier
than my initial projection. If that doesn't make him happy then he
needs more fiber.

Just the facts, M'am...But if thats the way you see it, don't you suppose that depends on whether or not you demand more?

I had hoped, even expected, that once you got all you "wanted" you might settle down and just be a ham instead of a hopeless horses patootie, but I see that was evidently too much to ask of one who kept himself so deprived for so long. Gotta have someone to blame all that on, I guess.

Hello;

I'm looking for a mobile amplifier for the 43-50 Mhz range to use with a
handheld transceiver, somewhere in the ballpark of 5 watts in/50 watts out.
I would appreciate it if anyone could steer me in the right direction. I've
looked around a lot on the web & in newsgroups, this seems to be a rare item

TIA-Bruce

Dick, is that what you thought?  Anything else at all?  Don't hold back
- your 15 minutes of f(l)ame are almost over.  Get it all out of your
mean shrivelled up little heart before its too late.  You'll feel better
afterward.

I'll still be around if/when you're ready to speak rationally about the
subject.

Sayanara, Brian

The extra digit on the display is not a mod, Chris ... it's a built-in
available feature!   That is, if you're referring to the 10 khz feature.

To get 10 hz resolution on the main display, press CLEAR while turning on
the power. To set it back to 100 hz resolution, do it again.

If you have the owner's manual, section 4-2-8 will have a list of functions
that can be toggled by pressing a button when you turn on the set.

I don't quite understand what you mean by "power up on SSB", however.

Anyone can tell me some information about a Kenwood TS430s and if they are reliable and good performing radio.?

Im in the grasp of one, but dont have any knowledge of this radio or how it performs.

Please Any information will help .

Post your views and comments here or email me ezyt@optushome.com.au

Thanks in advance

Ezat:

"Bang-for-the-buck" the TS-430S is a great deal. It's 100 watts, all mode, all bands with a transverter port, digital synthesized, very good sensitivity, etc. I've had 3 over the years and am using a TS-450S now as my primary rig.

Construction is medium grade. Chassis and covers are metal, but the boards are cheap phoenolic sometimes with bad thru-hole vias, especially in the power amplifier section. All are easily repairable and not too common.

Technically, other rigs have more elaborate design architectures, the results of which would probably be subtle to the casual amateur (IMD, dynamic range, synthesizer noise, etc.). My experience has shown that the more complex rigs have more to break in them, especially as time passes plus you may be paying for specs that you may not notice.

I think the TS-430S had about the right mix of simplicity vs function. Most sell for $400 or less. The Icom IC-735 sells for about $450 +/- and provides an excellent alternative with icom support (something that Kenwood has been lacking for the past couple of years).

See you on the air...

73,
Woody AK2F

I think I read all the responses and none of them talks about
the Koch Method. I won't say it is fun, but it does seem
like the way to learn code. The short version is that
you learn code at high speed by forcing your brain not
to translate the dits and dahs but to hear the unique
sound of them. This is done by starting you out with only
2 letters. You can learn 2 letters at 15 wpm can't you?
Then when you got those 2 down rock solid you add only one more.
Then get it down solid and so.

Check out the complete details at:

http://www.hfradio.org/koch_1.html

and there is a free java application for the method at

http://www.vmeng.com/minow/MorsePractice/MorsePractice.html

Good luck!

I got one mid 80's when they were early on the market, used it for several years, and since that time have owned a couple others acquired in trades. All were very good rigs and performed very well indeed. Be aware that they are slightly limited in areas such as memory channels having 10 instead of the usual 100 today, they have no direct frequency entry keypad, and if the memory backup lithium battery which also holds the rigs "brains" has not yet been replaced, you should have thats done soon. As I recall, if it isn't done before the battery expires the radio must be sent to a service center for reprogramming. Overall it is a very good piece of equipment for the cost.

Dick

The Kenwood 430 does not die if the battery does. You will loose the
memories and every time it is powered up it will come up at 14.000.0 mHz.
That's it. No catatrosphic happenings...

ERRRR....

Since when is TEXT **NOT** ASCII??? Text IS represented by 7 bits of the ASCII code. The graphics characters are formed with the addition of the 8th bit. But...BOTH ARE ASCII!!

I think you perhaps need to get a clue as well.

By the way, why do you keep change your address from "megabits" to "negabits"??? To confuse those who put you in their kill file?

    I have both a 430 and a 440SAT.  The 430 has been very reliable and has
done well for me.  I'm keeping it and will use it some when I'm not using my
dear old boatanchors.
    Terry (KA5IHV)

Isn't it silly that hams are told by Kenwood that you need to use
their qualified service personnel just to replace a battery?? Not to
mention that Kenwood wants an inflated price for their exact
replacement part battery, should you (gasp) try to do it yourself...

Well, Radio Shack sells a 3V lithium battery with a matching battery
holder that wired very nicely into my Kenwood TS-50. Take that
Kenwood...

>As I recall, if it isn't done before the battery expires the radio
>must be sent to a service center for reprogramming.

What a ridiculous design. Probably good for Kenwood profits though...

No Binaries, Or HIGH ASCII.. Is that better?

Negabits or megabits tells me where it came from..

Bob

What can I say Coward. at least when I say something I
have the B*LLS to sign it and I do NOT hide behind
a spammed email address using an AKA.. Just look in the header.

you remind me of a cop, they do not have "Balls" either

My Opinion..

The Thames Valley Repeater Group has a new website at www.tvrg.org.uk

The group operates four repeaters in the Thames Valley area, GB3AW, GB3BK,
GB3BN and GB3BN.

GB3BN the Bracknell UHF repeater is in the process of moving to a new
location which is expected to be complete around Christmas time. Please
visit the webpage for all the latest news on the move.

All comments on the website style and content are most welcome.

Wish I had read this sooner. Because one of the few useful things to me I got
from Maplins was something called 'Aluminium Solder/High Melting point solder'
Solders most things to most things with a standard solder gun.

i know recently some of you have posted links to sites with Ham Software, and I wish i had of been able to look into the future and say 'I might need that one day', but thats how it goes.........
I Have 'TrueTTY' which seems okay but doesnt decode morse, or SSTV for that matter.
All help greatly appreciated.

To some this may be old hat...
You can connect two PC's together to transfer files by using, amongst other things,' direct cable connection'
Its in the Programs-Accessories list...if it isnt, use 'Add new software' in Control Panel, Windows Components, Communications.

The quickest way to connect is to use a purpose made lead from computer stores called a data transfer lead that connects to both parallel ports.
On my PC's I get a transfer rate of about 2mb per minute.
Theres lots of help available in the Windows help file and on the net, try searching for 'DCC'
The lead costs less than 10 pounds.
Wrong place, wrong time, GM4UCD

If you have a browser like netscape of IE, go to a search engine. For instance, dogpile at:

http://www.dogpile.com/

Enter words that would appear on the web pages you are interested in like:

software download ham

press FETCH.

Several links will be listed. You are probably most interested in the one:

Oliver Welp: Amateur Radio Soundblaster Software Collection

There are others as well. Some nonsense links pop up, because the engine doing the search for you also thinks you eat hams.

Let me know if it doesn't work for you.
